RE: FINALAIR POLLUTION PERMIT-TO-INSTALL AND OPERATE
Facility ID: 0372020121
Permit Number: P0109394
Permit Type: Initial Installation
County: Sandusky

Dear Permit Holder:

Enclosed please find a final Air Pollution Permit-to-Install and Operate (PTIO) which will allow you to install, modify, and/or operate the described emissions unit(s) in the manner indicated in the permit. Because this permit contains conditions and restrictions, please read it very carefully. Please complete a survey at www.epa.ohio.gov/dapc/permitsurvey.aspx and give us feedback on your permitting experience. We value your opinion.

The issuance of this PTI is a final action of the Director and may be appealed to the Environmental Review Appeals Commission pursuant to Section 3745.04 of the Ohio Revised Code. The appeal must be in writing and set forth the action complained of and the grounds upon which the appeal is based. The appeal must be filed with the Commission within thirty (30) days after notice of the Director's action. The appeal must be accompanied by a filing fee of $70.00, made payable to “Ohio Treasurer Josh Mandel," which the Commission, in its discretion, may reduce if by affidavit you demonstrate that payment of the full amount of the fee would cause extreme hardship. Notice of the filing of the appeal shall be filed with the Director within three (3) days of filing with the Commission. Ohio EPA requests that a copy of the appeal be served upon the Ohio Attorney General’s Office, Environmental Enforcement Section. An appeal may be filed with the Environmental Review Appeals Commission at the following address:

Environmental Review Appeals Commission
309 South Fourth Street, Room 222
Columbus, OH 43215

If you have any questions, please contact Ohio EPA DAPC, Northwest District Office at (419)352-8461or the Office of Compliance Assistance and Pollution Prevention at (614) 644-3469. This permit can be accessed electronically on the DAPCWeb page,www.epa.ohio.gov/dapc, by clicking the "Issued Air Pollution Control Permits" link.

Sincerely,

Michael W. Ahern

Michael W. Ahern, Manager
Permit Issuance and Data Management Section, DAPC

Authorization

Facility ID: 0372020121
Application Number(s): A0043656, A0043823
Permit Number: P0109394
Permit Description: New (additional) Grain Dryer, and new (additional) Grain Receiving and associated operations.
Permit Type: Initial Installation
Permit Fee: $1,650.00
Issue Date: 3/1/2012
Effective Date: 3/1/2012
Expiration Date: 8/2/2021
Permit Evaluation Report (PER) Annual Date: Jan 1 - Dec 31, Due Feb 15

This document constitutes issuance to:

Sunrise Cooperative
1100 Burkholder Road
Clyde, OH 43410

of a Permit-to-Install and Operate for the emissions unit(s) identified on the following page.

Ohio EPA District Office or local air agency responsible for processing and administering your permit:

Ohio EPA DAPC, Northwest District Office
347 North Dunbridge Road
Bowling Green, OH 43402
(419)352-8461

The above named entity is hereby granted this Permit-to-Install and Operate for the air contaminant source(s) (emissions unit(s))listed in this section pursuant to Chapter 3745-31 of the Ohio Administrative Code. Issuance of this permit does not constitute expressed or implied approval or agreement that, if constructed or modified in accordance with the plans included in the application, the described emissions unit(s) will operate in compliance with applicable State and federal laws and regulations.

This permit is granted subject to the conditions attached hereto.

Ohio Environmental Protection Agency

Scott J. Nally
Director

Authorization (continued)

Permit Number: P0109394
Permit Description: New (additional) Grain Dryer, and new (additional) Grain Receiving and associated operations.

Permits for the following Emissions Unit(s) or groups of Emissions Units are in this document as indicated below:

Emissions Unit ID:	**F005**
Company Equipment ID:	F005
Superseded Permit Number:	
General Permit Category and Type:	Not Applicable
Emissions Unit ID:	**P901**
Company Equipment ID:	Receiving/Shipping Legs
Superseded Permit Number:	P0087630
General Permit Category and Type:	Not Applicable

A. Standard Terms and Conditions

1. What does this permit-to-install and operate ("PTIO") allow me to do?

This permit allows you to install and operate the emissions unit(s) identified in this PTIO. You must install and operate the unit(s) in accordance with the application you submitted and all the terms and conditions contained in this PTIO, including emission limits and those terms that ensure compliance with the emission limits (for example, operating, recordkeeping and monitoring requirements).

2. Who is responsible for complying with this permit?

The person identified on the "Authorization" page, above, is responsible for complying with this permit until the permit is revoked, terminated, or transferred. "Person" means a person, firm, corporation, association, or partnership. The words "you," "your," or "permittee" refer to the "person" identified on the "Authorization" page above.

The permit applies only to the emissions unit(s) identified in the permit. If you install or modify any other equipment that requires an air permit, you must apply for an additional PTIO(s) for these sources.

3. What records must I keep under this permit?

You must keep all records required by this permit, including monitoring data, test results, strip-chart recordings, calibration data, maintenance records, and any other record required by this permit for five years from the date the record was created. You can keep these records electronically, provided they can be made available to Ohio EPA during an inspection at the facility. Failure to make requested records available to Ohio EPA upon request is a violation of this permit requirement.

4. What are my permit fees and when do I pay them?

There are two fees associated with permitted air contaminant sources in Ohio:

PTIO fee. This one-time fee is based on a fee schedule in accordance with Ohio Revised Code (ORC) section 3745.11, or based on a time and materials charge for permit application review and permit processing if required by the Director.

You will be sent an invoice for this fee after you receive this PTIO and payment is due within 30 days of the invoice date. You are required to pay the fee for this PTIO even if you do not install or modify your operations as authorized by this permit.

Annual emissions fee. Ohio EPA will assess a separate fee based on the total annual emissions from your facility. You self-report your emissions in accordance with Ohio Administrative Code (OAC) Chapter 3745-78. This fee assessed is based on a fee schedule in ORC section 3745.11 and funds Ohio EPA's permit compliance oversight activities. Unless otherwise specified, facilities subject to one or more synthetic minor restrictions must use Ohio EPA's "Air Services" to submit annual emissions associated with this permit requirement.Ohio EPA will notify you when it is time to report your emissions and to pay your annual emission fees.

5. When does my PTIO expire, and when do I need to submit my renewal application?

This permit expires on the date identified at the beginning of this permit document (see "Authorization" page above) and you must submit a renewal application to renew the permit. Ohio EPA will send a renewal notice to you approximately six months prior to the expiration date of this permit. However, it is

very important that you submit a complete renewal permit application (postmarked prior to expiration of this permit) even if you do not receive the renewal notice.

If a complete renewal application is submitted before the expiration date, Ohio EPA considers this a timely application for purposes of ORC section 119.06, and you are authorized to continue operating the emissions unit(s) covered by this permit beyond the expiration date of this permit until final action is takenby Ohio EPA on the renewal application.

6. What happens to this permit if my project is delayed or I do not install or modify my source?

This PTIO expires 18 months after the issue date identified on the "Authorization" page above unless otherwise specified if you have not (1) started constructing the new or modified emission sources identified in this permit, or (2) entered into a binding contract to undertake such construction. This deadline can be extended by up to 12 months, provided you apply to Ohio EPA for this extension within a reasonable time before the 18-month period has ended and you can show good cause for any such extension.

7. What reports must I submit under this permit?

An annual permit evaluation report (PER) is required in addition to any malfunction reporting required by OAC rule 3745-15-06 or other specific rule-based reporting requirement identified in this permit. Your PER due date is identified in the Authorization section of this permit.

8. If I am required to obtain a Title V operating permit in the future, what happens to the operating provisions and PER obligations under this permit?

If you are required to obtain a Title V permit under OAC Chapter 3745-77 in the future, the permit-to-operate portion of this permit will be superseded by the issued Title V permit. From the effective date of the Title V permit forward, this PTIO will effectively become a PTI (permit-to-install) in accordance with OAC rule 3745-31-02(B). The following terms and conditions will no longer be applicable after issuance of the Title V permit: Section B, Term 1.b) and Section C, for each emissions unit, Term a)(2).

The PER requirements in this permit remain effective until the date the Title V permit is issued and is effective, and cease to apply after the effective date of the Title V permit. The final PER obligation will cover operations up to the effective date of the Title V permit and must be submitted on or before the submission deadline identified in this permit on the last day prior to the effective date of the Title V permit.

9. What are my obligations when I perform scheduled maintenance on air pollution control equipment?

You must perform scheduled maintenance of air pollution control equipment in accordance with OAC rule 3745-15-06(A). If scheduled maintenance requires shutting down or bypassing any air pollution control equipment, you must also shut down the emissions unit(s) served by the air pollution control equipment during maintenance, unless the conditions of OAC rule 3745-15-06(A)(3) are met. Any emissions that exceed permitted amount(s) under this permit (unless specifically exempted by rule) must be reported as deviations in the annual permit evaluation report (PER), including nonexempt excess emissions that occur during approved scheduled maintenance.

10. Do I have to report malfunctions of emissions units or air pollution control equipment? If so, how must I report?

If you have a reportable malfunction of any emissions unit(s) or any associated air pollution control system, you must report this to the Ohio EPA DAPC, Northwest District Office in accordance with OAC rule 3745-15-06(B). Malfunctions that must be reported are those that result in emissions that exceed permitted emission levels. It is your responsibility to evaluate control equipment breakdowns and operational upsets to determine if a reportable malfunction has occurred.

If you have a malfunction, but determine that it is not a reportable malfunction under OAC rule 3745-15-06(B), it is recommended that you maintain records associated with control equipment breakdown or process upsets. Although it is not a requirement of this permit, Ohio EPA recommends that you maintain records for non-reportable malfunctions.

11. Can Ohio EPA or my local air agency inspect the facility where the emission unit(s) is/are located?

Yes. Under Ohio law, the Director or his authorized representative may inspect the facility, conduct tests, examine records or reports to determine compliance with air pollution laws and regulations and the terms and conditions of this permit. You must provide, within a reasonable time, any information Ohio EPA requests either verbally or in writing.

12. What happens if one or more emissions units operated under this permit is/are shut down permanently?

Ohio EPA can terminate the permit terms associated with any permanently shut down emissions unit. "Shut down" means the emissions unit has been physically removed from service or has been altered in such a way that it can no longer operate without a subsequent "modification" or "installation" as defined in OAC Chapter 3745-31.

You should notify Ohio EPA of any emissions unit that is permanently shut down by submitting[1] a certification that identifies the date on which the emissions unit was permanently shut down. The certification must be submitted by an authorized official from the facility. You cannot continue to operate an emissions unit once the certification has been submitted to Ohio EPA by the authorized official.

You must comply with all recordkeeping and reporting for any permanently shut down emissions unit in accordance with the provisions of the permit, regulations or laws that were enforceable during the period of operation, such as the requirement to submit a PER, air fee emission report, or malfunction report. You must also keep all records relating to any permanently shutdown emissions unit, generated while the emissions unit was in operation, for at least five years from the date the record was generated.

Again, you cannot resume operation of any emissions unit certified by the authorized official as being permanently shut down without first applying for and obtaining a permit pursuant to OAC Chapter 3745-31.

[1]Permittees that use Ohio EPA's "Air Services" can mark the affected emissions unit(s) as "permanently shutdown" in the facility profile along with the date the emissions unit(s) was permanently removed and/or disabled. Submitting the facility profile update will constitute notifying of the permanent shutdown of the affected emissions unit(s).

13. Can I transfer this permit to a new owner or operator?

You can transfer this permit to a new owner or operator. If you transfer the permit, you must follow the procedures in OAC Chapter 3745-31, including notifying Ohio EPA or the local air agency of the change in ownership or operator. Any transferee of this permit must assume the responsibilities of the transferor permit holder.

14. Does compliance with this permit constitute compliance with OAC rule 3745-15-07, "air pollution nuisance"?

This permit and OAC rule 3745-15-07 prohibit operation of the air contaminant source(s) regulated under this permit in a manner that causes a nuisance. Ohio EPA can require additional controls or modification of the requirements of this permit through enforcement orders or judicial enforcement action if, upon investigation, Ohio EPA determines existing operations are causing a nuisance.

15. What happens if a portion of this permit is determined to be invalid?

If a portion of this permit is determined to be invalid, the remainder of the terms and conditions remain valid and enforceable. The exception is where the enforceability of terms and conditions are dependent on the term or condition that was declared invalid.

B. Facility-Wide Terms and Conditions

1. This permit document constitutes a permit-to-install issued in accordance with ORC 3704.03(F) and a permit-to-operate issued in accordance with ORC 3704.03(G).

   a) For the purpose of a permit-to-install document, the facility-wide terms and conditions identified below are federally enforceable with the exception of those listed below which are enforceable under state law only.

      (1) None.

   b) For the purpose of a permit-to-operate document, the facility-wide terms and conditions identified below are enforceable under state law only with the exception of those listed below which are federally enforceable.

      (1) None.

C. Emissions Unit Terms and Conditions

1. F005

Operations, Property and/or Equipment Description:

Grain Dryer (column-type) - 300 tons (10,000 bushels) /hr - 108 mmBtu/hrn.g.

a) This permit document constitutes a permit-to-install issued in accordance with ORC 3704.03(F) and a permit-to-operate issued in accordance with ORC 3704.03(G).

(1) For the purpose of a permit-to-install document, the emissions unit terms and conditions identified below are federally enforceable with the exception of those listed below which are enforceable under state law only.

a. None.

(2) For the purpose of a permit-to-operate document, the emissions unit terms and conditions identified below are enforceable under state law only with the exception of those listed below which are federally enforceable.

a. None.

b) Applicable Emissions Limitations and/or Control Requirements

(1) The specific operation(s), property, and/or equipment that constitute each emissions unit along with the applicable rules and/or requirements and with the applicable emissions limitations and/or control measures are identified below. Emissions from each unit shall not exceed the listed limitations, and the listed control measures shall be specified in narrative form following the table.

	Applicable Rules/Requirements	Applicable Emissions Limitations/Control Measures
a.	OAC rule 3745-31-05(F)	Emission limitations, opacity restrictions operational restrictions, and control requirements [see b)(2)a. and c)(1).]
b.	ORC 3704.03(T)	See b)(2)b.
c.	OAC rule 3745-31-05(A)(3), as effective 11/30/2001	See b)(2)c.
d.	OAC rule 3745-31-05(A)(3), as effective 12/1/2006	See b)(2)d.
e.	40 CFR 60.300 et seq. NSPS Subpart DD)	See b)(2)f.
f.	OAC rule 3745-17-07(B)	See b)(2)g.
g.	OAC rule 3745-17-08(B)	See b)(2)h.

(2) Additional Terms and Conditions

a. This permit establishes the following legally and practically enforceable emission limitations for the purpose of limiting potential to emit (PTE). The legally and practically enforceable emission limitations are voluntary restrictions established

under OAC rule 3745-31-05(F) and are based in part on the operational restriction contained in c)(1) which limits hours of operation:

i. 12.4 tons PM_{10} /year;

ii. 8.10 tons NO_X /year;

iii. 6.80 tons CO /year; and

iv. Visible fugitive PE shall not exceed 10% opacity, as a three-minute average from the grain dryer.

b. Best Available Technology (BAT) requirements (for PM_{10}) under ORC 3704.03(T) have been determined to be compliance with the voluntary restrictions established in accordance with OAC rule 3745-31-05(F) [see b)(2)a.].

c. Best Available Technology (BAT) requirements under OAC rule 3745-31-05(A)(3), as effective 11/30/01 have been determined to be compliance with the voluntary restrictions established in accordance with OAC rule 3745-31-05(F) [see b)(2)a.].

It should be noted that the voluntary restrictions were also established with the intentional purpose of avoiding BAT requirements under OAC rule 3745-31-05(A)(3), as effective 12/01/06 [see b)(2)c.].

The permittee has satisfied the Best Available Technology (BAT) requirements pursuant to OAC paragraph 3745-31-05(A)(3), as effective November 30, 2001, in this permit. On December 1, 2006, paragraph (A)(3) of OAC rule 3745-31-05 was revised to conform to ORC changes effective August 3, 2006 (S.B. 265 changes), such that BAT is no longer required by State regulations for NAAQS pollutants less than ten tons per year. However, that rule revision has not yet been approved by U.S. EPA as a revision to Ohio's State Implementation Plan (SIP). Therefore, until the SIP revision occurs and the U.S. EPA approves the revisions to OAC rule 3745-31-05, the requirement to satisfy BAT still exists as part of the federally-approved SIP for Ohio. Once U.S. EPA approves the December 1, 2006 version of 3745-31-05, then these emission limits/control measures no longer apply.

It should be noted that the requirements established pursuant to OAC rule 3745-31-05(F) will remain applicable after the above SIP revisions are approved by U.S. EPA.

d. This rule paragraph applies once U.S. EPA approves the December 1, 2006 version of OAC rule 3745-31-05 as part of the State Implementation Plan.

The Best Available Technology (BAT) requirements under OAC rule 3745-31-05 (A)(3)(a) do not apply to the emissions of PM_{10}, NO_X, and CO since the potential to emit, taking into account the voluntary restriction on hours of operation, is less than 10 tons per year, per pollutant.

e. The BAT requirements under OAC rule 3745-31-05(A)(3) are not applicable to the particulate emissions emitted from this emissions unit. BAT is only applicable to emissions of an air contaminant or precursor of an air contaminant for which a National Ambient Air Quality Standard (NAAQS) has been adopted under the Clean Air Act. Particulate emissions (also referred to as total suspended particulate or particulate matter) is an air contaminant that does not involve an established NAAQS.

f. The perforation plate hole diameter shall not exceed 0.094 inches. [40 CFR 60.302(a)(1)]

g. This emissions unit is exempt from the visible particulate emission limitations specified in OAC rule 3745-17-07(B) pursuant to OAC rule 3745-17-07(B)(11)(e).

h. This facility is not located within an "Appendix A" area as identified in OAC rule 3745-17-08. Therefore, pursuant to OAC rule 3745-17-08(A), this emissions unit is exempt from the requirements of OAC rule 3745-17-08(B).

c) Operational Restrictions

(1) The following operational restriction has been included in this permit for the purpose of establishing legally and practically enforceable requirements which limit PTE [see b)(2)a.]: The maximum annual hours of operation for this emissions unit shall not exceed 1500.

d) Monitoring and/or Recordkeeping Requirements

(1) The permittee shall maintain monthly records of the hours of operation for this emissions unit (in hours per month and total hours, to date for the calendar year).

e) Reporting Requirements

(1) The permittee shall submit an annual Permit Evaluation Report (PER) to the Ohio EPA District Office or Local Air Agency by the due date identified in the Authorization section of this permit. The permit evaluation report shall cover a reporting period of no more than twelve-months for each air contaminant source identified in this permit. It is recommended that the PER is submitted electronically through the Ohio EPA's "e-Business Center: Air Services" although PERs can be submitted via U.S. postal service or can be hand delivered.

f) Testing Requirements

(1) Compliance with the Emissions Limitations and/or Control Requirements specified in section b) of these terms and conditions shall be determined in accordance with the following methods:

a. <u>Emission Limitations</u>:
12.4 tons fugitive PM_{10} /year

Applicable Compliance Method:
The annual PM_{10} limitation was developed by multiplying the maximum grain dryer throughput of 450,000 tons /year, the AP-42 emission factor of 0.055 lb PM_{10} /ton of grain [Table 9.9.1-1 (update 5/2003)], then dividing by 2000 lbs/ton. The maximum grain throughput was developed by multiplying the maximum drying capacity of the grain dryer of 10,000 bushels/hour, a maximum operational schedule of 1500 hours, and conversion factors of 56 lbs/bushel (corn) and 1 ton/2000 lbs.

Therefore, provided compliance is shown with the hours of operation restriction, compliance with the annual emission limitation shall also be demonstrated.

b. Emission Limitations:
8.10 tons NO_X /yr (from the combustion of natural gas)

Applicable Compliance Method:
The annual NO_X limitation was developed by multiplying the maximum hourly gas burning capacity of 108 mmBtu/hr, the AP-42 emission factor for natural gas of 0.100 lb NO_X /mmBtu [Table 1.4-1 (revised 7/98)] and a maximum operational schedule of 1500 hours, then dividing by 2000 lbs/ton. Therefore, provided compliance is shown with the hours of operation restriction, compliance with the annual emission limitation shall also be demonstrated.

c. Emission Limitations:
6.80 tons CO/year (from the combustion of natural gas)

Applicable Compliance Method:
The annual CO limitation was developed by multiplying the maximum hourly gas burning capacity of 108 mmBtu/hr, the AP-42 emission factor for natural gas of 0.084 lb CO /mmBtu [Table 1.4-1 (revised 7/98)] and a maximum operational schedule of 1500 hours, then dividing by 2000 lbs/ton. Therefore, provided compliance is shown with the hours of operation restriction, compliance with the annual emission limitation shall also be demonstrated.

d. Emission Limitations:
Visible fugitive PE shall not exceed 20% opacity, as a three-minute average, from the grain dryer.

Applicable Compliance Method:
If required, compliance shall be determined in accordance with 40 CFR Part 60, Appendix A, Method 9, and (if applicable) the modifications listed in paragraphs (B)(3)(a) and (B)(3)(b) of OAC rule 3745-17-03.

g) Miscellaneous Requirements

(1) None.

2. P901, Grain Receiving and associated operations

Operations, Property and/or Equipment Description:

grain receiving stations, transfer/conveying and screening/cleaning operations (including a new receiving Pit #2 and associated equipment)

a) This permit document constitutes a permit-to-install issued in accordance with ORC 3704.03(F) and a permit-to-operate issued in accordance with ORC 3704.03(G).

(1) For the purpose of a permit-to-install document, the emissions unit terms and conditions identified below are federally enforceable with the exception of those listed below which are enforceable under state law only.

a. None.

(2) For the purpose of a permit-to-operate document, the emissions unit terms and conditions identified below are enforceable under state law only with the exception of those listed below which are federally enforceable.

a. None.

b) Applicable Emissions Limitations and/or Control Requirements

(1) The specific operation(s), property, and/or equipment that constitute each emissions unit along with the applicable rules and/or requirements and with the applicable emissions limitations and/or control measures are identified below. Emissions from each unit shall not exceed the listed limitations, and the listed control measures shall be specified in narrative form following the table.

	Applicable Rules/Requirements	Applicable Emissions Limitations/Control Measures
a.	OAC rule 3745-31-05(F)	Emission limitations, opacity restrictions operational restrictions, and control requirements [see b)(2)a., c)(1), and c)(2)]
b.	OAC rule 3745-31-05(A)(3), as effective 11/30/2001	See b)(2)b.
c.	OAC rule 3745-31-05(A)(3), as effective 12/1/2006	See b)(2)c.
d.	40 CFR 60.300 et seq. (NSPS Subpart DD)	See b)(2)e.
e.	OAC rule 3745-17-07(B)	See b)(2)f.
f.	OAC rule 3745-17-08(B)	See b)(2)g.
g.	OAC rule 3745-17-11(B)	3.68 lbs PE /hr from the dust collector exhaust
h.	OAC rule 3745-17-07(A)	See b)(2)h.

(2) Additional Terms and Conditions

a. This permit establishes the following legally and practically enforceable emission limitations for the purpose of limiting potential to emit (PTE). The legally and practically enforceable emission limitations are voluntary restrictions established under OAC rule 3745-31-05(F) and are based on the operational restrictions contained in c)(1) and c)(2) which include throughput restrictions and control equipment measures:

i. 0.01 grains PM_{10} /dry standard cubic foot (dscf) and 0.023 ton PM_{10} /yr from the 'Donaldson Torit' dust collector exhaust for grain receiving Pit #2;

ii. visible particulate emissions from the 'Donaldson Torit' dust collector exhaust from grain receiving Pit #2 shall not exceed 0% opacity as a six-minute average;

iii. fugitive emission limitation for truck grain receiving to all truck dump pits, transferring, conveying, screening, and cleaning operations of 0.82 ton PM_{10} /year;

iv. visible fugitive particulate emission limitation of 20% opacity as a three-minute average from enclosure serving truck grain receiving to truck dump pits other than Pit #2;

v. visible fugitive particulate emission limitation of 5% opacity as a six-minute average from the enclosure serving truck grain receiving to truck dump Pit #2;

vi. visible fugitive particulate emission limitation of 0% opacity as a six-minute average from any grain handling (transferring and conveying) operation; and

vii. visible fugitive particulate emission limitation of 0% opacity as a six-minute average from screening/cleaning operations.

*All emissions of particulate matter from the baghouse exhaust are PM_{10}.

b. Best Available Technology (BAT) requirements under OAC rule 3745-31-05(A)(3), as effective 11/30/01 have been determined to be compliance with the voluntary restrictions established in accordance with OAC rule 3745-31-05(F) [see b)(2)a.].

It should be noted that the voluntary restrictions were also established with the intentional purpose of avoiding BAT requirements under OAC rule 3745-31-05(A)(3), as effective 12/01/06 [see b)(2)c.].

The permittee has satisfied the Best Available Technology (BAT) requirements pursuant to OAC paragraph 3745-31-05(A)(3), as effective November 30, 2001, in this permit. On December 1, 2006, paragraph (A)(3) of OAC rule 3745-31-05

was revised to conform to ORC changes effective August 3, 2006 (S.B. 265 changes), such that BAT is no longer required by State regulations for NAAQS pollutants less than ten tons per year. However, that rule revision has not yet been approved by U.S. EPA as a revision to Ohio's State Implementation Plan (SIP). Therefore, until the SIP revision occurs and the U.S. EPA approves the revisions to OAC rule 3745-31-05, the requirement to satisfy BAT still exists as part of the federally-approved SIP for Ohio. Once U.S. EPA approves the December 1, 2006 version of 3745-31-05, then these emission limits/control measures no longer apply.

It should be noted that the requirements established pursuant to OAC rule 3745-31-05(F) will remain applicable after the above SIP revisions are approved by U.S. EPA.

c. This rule paragraph applies once U.S. EPA approves the December 1, 2006 version of OAC rule 3745-31-05 as part of the State Implementation Plan.

Best Available Technology (BAT) requirements under OAC rule 3745-31-05(A)(3)(a) do not apply to the PM_{10} emissions from this air contaminant source since the controlled potential to emit (PTE) is less than 10 tons per year taking into consideration practically and legally enforceable voluntary restrictions established under OAC rule 3745-31-05(F) in this permit.

d. The BAT requirements under OAC rule 3745-31-05(A)(3) are not applicable to the particulate emissions emitted from this emissions unit. BAT is only applicable to emissions of an air contaminant or precursor of an air contaminant for which a National Ambient Air Quality Standard (NAAQS) has been adopted under the Clean Air Act. Particulate emissions (also referred to as total suspended particulate or particulate matter) is an air contaminant that does not involve an established NAAQS.

e. The requirements specified by this rule (for grain receiving Pit #4, and associated transferring and conveying) are equivalent to or less stringent than the voluntary restrictions established under OAC rule 3745-31-05(F).

f. This emissions unit is exempt from the visible particulate emission limitations specified in OAC rule 3745-17-07(B) pursuant to OAC rule 3745-17-07(B)(11)(e).

g. This facility is not located within an "Appendix A" area as identified in OAC rule 3745-17-08. Therefore, pursuant to OAC rule 3745-17-08(A), this emissions unit is exempt from the requirements of OAC rule 3745-17-08(B).

h. The emission limitation specified by this rule is less stringent than the voluntary restrictions established under OAC rule 3745-31-05(F).

c) Operational Restrictions

(1) The following operational restrictions have been included in this permit to represent the maximum potential throughput for individual elevator operations:

a. The maximum throughput for truck receiving shall not exceed 665,000 tons of grain per year;

b. The maximum throughput for transferring/conveying for this emissions unit shall not exceed 665,000 tons of grain per year; and

c. The maximum throughput for screening/cleaning shall not exceed 665,000 tons of grain per year.

(2) The following operational restrictions have been included in this permit for the purpose of establishing legally and practically enforceable requirements which limit PTE [see b)(2)a.]:

a. truck receiving operations associated with pits other than Pit #2 shall be controlled by a three-sided enclosure achieving a minimum removal efficiency of 75%;

b. truck receiving operations associated with Pit #2 shall be controlled by a three-sided enclosure vented to a Donaldson Torit dust collector achieving a maximum outlet concentration of 0.01 gr PM_{10} /dscf (90% capture efficiency – 99% removal efficiency* - 89% overall control);

* the maximum outlet concentration of 0.01 grain of PM_{10} /dscf corresponds to a 99% removal efficiency

c. transferring/conveying operations shall be totally enclosed;

d. screening/cleaning operations shall be totally enclosed; and

e. all grain processed through the transferring/conveying and screen/cleaning operations shall have been treated with mineral oil. The mineral oil may be applied at any operation at the grain elevator preceding these operations (i.e. oil may be applied at grain receiving operations).

d) Monitoring and/or Recordkeeping Requirements

(1) The permittee shall maintain monthly records of the amount of material throughput for each of the following individual operations for this emissions unit, in tons per month and total tons, to date, for the calendar year:

a. throughput for truck grain receiving;

b. throughput for grain transferred/conveyed in this emission unit; and

c. throughput for screening/cleaning operations.

(2) The permittee shall perform daily checks, when the emissions unit is in operation and when the weather conditions allow, for any visible fugitive particulate emissions from the following for this emissions unit:

a. the three-sided enclosures on the truck grain receiving pits;

b. the totally enclosed transferring /conveying operations; and

c. the totally enclosed screening /cleaning operations;

The presence or absence of any visible fugitive emissions shall be noted in an operations log. If visible emissions are observed, the permittee shall also note the following in the operations log:

d. for the totally enclosed transferring/conveying and screening/cleaning operations:

i. the location and color of the emissions;

ii. the total duration of any visible emission incident; and

iii. any corrective actions taken to eliminate the visible emissions.

e. for the three-sided enclosure on the truck grain receiving pits,:

i. the location and color of the emissions;

ii. whether the emissions are representative of normal operations;

iii. if the emissions are not representative of normal operations, the cause of the abnormal emissions;

iv. the total duration of any visible emission incident; and

v. any corrective actions taken to minimize or eliminate the visible emissions.

The following applies to d)(2)e: If visible emissions are present, a visible emission incident has occurred. The observer does not have to document the exact start and end times for the visible emission incident under item d)(2)e.iv above or continue the daily check until the incident has ended. The observer may indicate that the visible emission incident was continuous during the observation period (or, if known, continuous during the operation of the emissions unit). With respect to the documentation of corrective actions, the observer may indicate that no corrective actions were taken if the visible emissions were representative of normal operations, or specify the minor corrective actions that were taken to ensure that the emissions unit continued to operate under normal conditions, or specify the corrective actions that were taken to eliminate abnormal visible emissions.

(3) The permittee shall perform daily checks, when the emissions unit is in operation and when the weather conditions allow, for any visible particulate emissions from the stack serving this emissions unit (for the dust collector associated with Pit #2). The presence or absence of any visible emissions shall be noted in an operations log. If visible emissions are observed, the permittee shall also note the following in the operations log:

a. the location and color of the emissions.
b. the total duration of any visible emissions incident.
c. any corrective actions taken to eliminate the visible emissions.

(4) For each day during which the permittee processes grain through the transferring/conveying operations which has not been treated with oil, the permittee shall maintain a record of the amount of grain processed.

e) Reporting Requirements

(1) The permittee shall submit an annual Permit Evaluation Report (PER) to the Ohio EPA District Office or Local Air Agency by the due date identified in the Authorization section of this permit. The permit evaluation report shall cover a reporting period of no more than twelve-months for each air contaminant source identified in this permit. It is recommended that the PER is submitted electronically through the Ohio EPA's "e-Business Center: Air Services" although PERs can be submitted via U.S. postal service or can be hand delivered.

(2) The permittee shall identify the following information in the annual PER in accordance with the monitoring requirements for visible emissions in d)(2) and d)(3) above:

a. all days during which any visible particulate emissions were observed from the stack serving this emission unit; and

b. any corrective actions taken to eliminate the visible particulate emissions.

c. all days during which any visible fugitive particulate emissions were observed from the operations associated with this emissions unit; and

d. any corrective actions taken to minimize or eliminate the visible fugitive particulate emissions.

The above information shall be provided as an attachment to the PER. If there were no day(s) and/or corrective action(s) to identify as required above, the permittee shall indicate within the "Additional Information and Corrections" section of the PER that no visible emissions were observed and no corrective actions were taken.

(3) Pursuant to the New Source Performance Standards (NSPS), the permittee is hereby advised of the requirements to report the following at the appropriate times:

a. construction date (no later than 30 days after such date);

b. actual start-up date (within 15 days after such date); and

c. date of performance testing (if required, at least 30 days prior to testing).

Reports are to be sent to:

Ohio EPA, Northwest District Office
347 North Dunbridge Road
Bowling Green, OH 43402

f) Testing Requirements

(1) The permittee shall conduct, or have conducted, emission testing for this emissions unit in accordance with the following requirements:

a. The emission testing shall be conducted during the fall grain harvest season of 2012 for purposes of meeting the maximum source operating rate required in f)(1)d. below. Testing timeframe(s) specified may be amended or waived for cause upon prior request of, and written approval of, the Ohio EPA.

b. The emission testing shall be conducted to demonstrate compliance with:

i. the maximum outlet concentration of 0.01 grain of PM_{10} /dscf for the dust collector exhaust for grain receiving Pit #2;

ii. visible emissions for the dust collector exhaust stack; and

iii. fugitive visible emissions for the enclosure serving truck grain receiving Pit #2, and associated transfer and conveying for Pit #2.

c. The following test method(s) shall be employed to meet the testing requirements above:

i. PM_{10} - Methods 201/201A and 202 of 40 CFR Part 51, Appendix M. Alternative U.S. EPA-approved test methods may be used with prior approval from the Ohio EPA; and

ii. Visible emissions: Method 9 of 40 CFR Part 60 Appendix A

d. The test(s) shall be conducted at a Maximum Source Operating Rate (MSOR), unless otherwise specified or approved by the Northwest District Office. MSOR is defined as the condition that is most likely to challenge the emission control measures with regards to meeting the applicable emission standard(s). Although it generally consists of operating the emissions unit at its maximum material input/production rates and results in the highest emission rate of the tested pollutant, there may be circumstances where a lower emissions loading is deemed the most challenging control scenario. Failure to test at the MSOR is justification for not accepting the test results as a demonstration of compliance.

e. Not later than 30 days prior to the proposed test date(s), the permittee shall submit an "Intent to Test" notification to the Northwest District Office. The "Intent to Test" notification shall describe in detail the proposed test methods and procedures, the emissions unit operating parameters, the time(s) and date(s) of the test(s), and the person(s) who will be conducting the test(s). Failure to submit such notification for review and approval prior to the test(s) may result in the Northwest District Office's refusal to accept the results of the emission test(s).

f. Personnel from the Northwest District Office shall be permitted to witness the test(s), examine the testing equipment, and acquire data and information necessary to ensure that the operation of the emissions unit and the testing

procedures provide a valid characterization of the emissions from the emissions unit and/or the performance of the control equipment.

g. A comprehensive written report on the results of the emissions test(s) shall be signed by the person or persons responsible for the tests and submitted to the Northwest District Office within 30 days following completion of the test(s). The permittee may request additional time for the submittal of the written report, where warranted, with prior approval from the Northwest District Office.

h. Future testing requirements shall be determined /conducted in accordance with applicable rules, polices, etc. (i.e. Engineering Guide #16, OAC rule 3745-15-04, etc.). Testing time frame(s) specified may be amended or waived for cause upon prior request of, and written approval of, the Ohio EPA Northwest District Office.

(2) Compliance with the emission limitation in section b)(1) of these terms and conditions shall be determined in accordance with the following method:

a. Emission Limitation:
0.01 grains PM_{10} /dscf from the dust collector exhaust for the grain receiving pit

Applicable Compliance Method:
The permittee shall demonstrate compliance with the allowable PM_{10} limitation based on the results of emission testing. [See f)(1).]

b. Emission Limitation:
0.023 ton PM_{10} /yr from the dust collector exhaust for the grain receiving pit

Applicable Compliance Method:
The annual PM_{10} limitation was developed by multiplying the maximum annual grain throughput of 665,000 tons by an emission factor of 0.0078 lb of PM_{10} /ton of grain (AP-42 Table 9.9.1-1 [3/03]), applying a capture efficiency of 90%* for the dust collector, and a control efficiency of 99% for the dust collector, then dividing by 2000 lbs/ton. Therefore, provided compliance with the annual grain throughput is shown, compliance with the annual emission limitation shall also be demonstrated.

* conservative assumption of estimating capture for dust collector, for purposes of developing collector exhaust emissions limit, i.e. not used for fugitive dust estimates for these operations

c. Emission Limitation:
Visible particulate emissions from the dust collector for the grain receiving pit shall not exceed 0% opacity as a six-minute average

Applicable Compliance Method:
If required, compliance shall be determined in accordance with 40 CFR Part 60, Appendix A, Method 9.

d. Emission Limitation:
fugitive emission limitation of 0.82 ton PM_{10} /year, for truck grain receiving pit, transferring, conveying, screening, and cleaning operations

Applicable Compliance Method:
The annual fugitive PM_{10} limitation was developed by summing the following:

grain receiving pits:
multiplying a maximum annual grain throughput of 665,000 tons by an emission factor of 0.0078 lb PM_{10} /ton grain, (AP-42 Table 9.9.1-1 [3/03]), applying a control efficiency of 75% for use of a three-sided enclosure, then dividing by 2000 lbs/ton [0.648 ton].

transferring and conveying:
multiplying a maximum annual grain throughput of 665,000 tons by an emission factor of 0.034 lb PM_{10} /ton grain, (AP-42 Table 9.9.1-1 [3/03]), and applying a control efficiency of 99% for use of a total enclosure, then dividing by 2000 lbs/ton [0.113 ton].

screening and cleaning:
multiplying a maximum annual grain throughput of 665,000 tons by an emission factor of 0.019 lb PM_{10} /ton grain, (AP-42 Table 9.9.1-1 [3/03]), and applying a control efficiency of 99% for use of a total enclosure, then dividing by 2000 lbs/ton [0.063 ton].

Therefore, provided compliance with the annual grain throughput is shown, compliance with the annual emission limitation shall also be demonstrated.

e. Emission Limitation:
Visible fugitive particulate emission limitation of 20% opacity as a three-minute average from the enclosure serving truck grain receiving pits other than Pit #2

Applicable Compliance Method:
If required, compliance shall be determined in accordance with 40 CFR Part 60, Appendix A, Method 9, and the modifications listed in paragraphs (B)(3)(a) and (B)(3)(b) of OAC rule 3745-17-03.

f. Emission Limitation:
Visible fugitive particulate emission limitation of 5% opacity as a six-minute average from the enclosure serving the truck grain receiving Pit #2

Applicable Compliance Method:
If required, compliance shall be determined in accordance with 40 CFR Part 60, Appendix A, Method 9.

g. Emission Limitation:
Visible fugitive particulate emission limitation of 0% opacity from any grain handling (transferring /conveying), and/or screening /cleaning operation

Applicable Compliance Method:
If required, compliance shall be determined in accordance with 40 CFR Part 60, Appendix A, Method 9.

h. Emission Limitation:
3.68 lbs PE/hr from the dust collector exhaust for grain receiving Pit #2

Applicable Compliance Method:
If required, compliance shall be demonstrated in accordance with OAC rule 3745-17-03 (B)(10).

g) Miscellaneous Requirements

(1) The application and enforcement of the provisions of the New Source Performance Standards (NSPS), as promulgated by the United States Environmental Protection Agency, 40 CFR Part 60, are delegated to the Ohio Environmental Protection Agency. The requirements for 40 CFR Part 60 are also federally enforceable.
