RE: FINALAIR POLLUTION PERMIT-TO-INSTALL AND OPERATE
Facility ID: 0247040798
Permit Number: P0117668
Permit Type: Renewal
County: Lorain

Dear Permit Holder:

Enclosed please find a final Ohio Environmental Protection Agency (EPA) Air Pollution Permit-to-Install and Operate (PTIO) which will allow you to install, modify, and/or operate the described emissions unit(s) in the manner indicated in the permit. Because this permit contains conditions and restrictions, please read it very carefully. In this letter you will find the information on the following topics:

- How to appeal this permit
• How to save money, reduce pollution and reduce energy consumption
• How to give us feedback on your permitting experience
• How to get an electronic copy of your permit

How to appeal this permit

The issuance of this PTIO is a final action of the Director and may be appealed to the Environmental Review Appeals Commission pursuant to Section 3745.04 of the Ohio Revised Code. The appeal must be in writing and set forth the action complained of and the grounds upon which the appeal is based. The appeal must be filed with the Commission within thirty (30) days after notice of the Director's action. The appeal must be accompanied by a filing fee of \$70.00, made payable to "Ohio Treasurer Josh Mandel," which the Commission, in its discretion, may reduce if by affidavit you demonstrate that payment of the full amount of the fee would cause extreme hardship. Notice of the filing of the appeal shall be filed with the Director within three (3) days of filing with the Commission. Ohio EPA requests that a copy of the appeal be served upon the Ohio Attorney General's Office, Environmental Enforcement Section. An appeal may be filed with the Environmental Review Appeals Commission at the following address:

Environmental Review Appeals Commission
77 South High Street, 17th Floor
Columbus, OH 43215

Certified Mail

Table with 2 columns: Yes/No and various permit conditions like TOXIC REVIEW, SYNTHETIC MINOR TO AVOID MAJOR NSR, etc.

How to save money, reduce pollution and reduce energy consumption

The Ohio EPA is encouraging companies to investigate pollution prevention and energy conservation. Not only will this reduce pollution and energy consumption, but it can also save you money. If you would like to learn ways you can save money while protecting the environment, please contact our Office of Compliance Assistance and Pollution Prevention at (614) 644-3469. Additionally, all or a portion of the capital expenditures related to installing air pollution control equipment under this permit may be eligible for financing and State tax exemptions through the Ohio Air Quality Development Authority (OAQDA) under Ohio Revised Code Section 3706. For more information, see the OAQDA website: www.ohioairquality.org/clean_air

How to give us feedback on your permitting experience

Please complete a survey at www.epa.ohio.gov/survey.aspx and give us feedback on your permitting experience. We value your opinion.

How to get an electronic copy of your permit

This permit can be accessed electronically via the eBusiness Center: Air Services in Microsoft Word format or in Adobe PDF on the Division of Air Pollution Control (DAPC) Web page, www.epa.ohio.gov/dapc by clicking the "Search for Permits" link under the Permitting topic on the Programs tab.

If you have any questions, please contact Ohio EPA DAPC, Northeast District Office at (330)425-9171 or the Office of Compliance Assistance and Pollution Prevention at (614) 644-3469.

Sincerely,

Erica R. Engel-Ishida, Manager
Permit Issuance and Data Management Section, DAPC

Final Permit-to-Install and Operate
Aleris Specialty Products, Inc.
Permit Number: P0117668
Facility ID: 0247040798
Effective Date: 12/24/2014

Authorization

Facility ID: 0247040798
Application Number(s): A0051483
Permit Number: P0117668
Permit Description: Renewal FEPTIO for a scrap aluminum processing facility.
Permit Type: Renewal
Permit Fee: \$0.00
Issue Date: 12/24/2014
Effective Date: 12/24/2014
Expiration Date: 12/24/2019
Permit Evaluation Report (PER) Annual Date: Jan 1 - Dec 31, Due Feb 15

This document constitutes issuance to:

Aleris Specialty Products, Inc.
320 HURON ST
Elyria, OH 44035

of a Permit-to-Install and Operate for the emissions unit(s) identified on the following page.

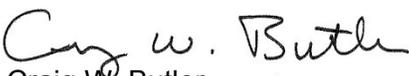

Ohio Environmental Protection Agency (EPA) District Office or local air agency responsible for processing and administering your permit:

Ohio EPA DAPC, Northeast District Office
2110 East Aurora Road
Twinsburg, OH 44087
(330)425-9171

The above named entity is hereby granted this Permit-to-Install and Operate for the air contaminant source(s) (emissions unit(s)) listed in this section pursuant to Chapter 3745-31 of the Ohio Administrative Code. Issuance of this permit does not constitute expressed or implied approval or agreement that, if constructed or modified in accordance with the plans included in the application, the described emissions unit(s) will operate in compliance with applicable State and federal laws and regulations.

This permit is granted subject to the conditions attached hereto.

Ohio Environmental Protection Agency

Craig W. Butler
Director

Authorization (continued)

Permit Number: P0117668

Permit Description: Renewal FEPTIO for a scrap aluminum processing facility.

Final Permit-to-Install and Operate

Aleris Specialty Products, Inc.

Permit Number: P0117668

Facility ID: 0247040798

Effective Date: 12/24/2014

A. Standard Terms and Conditions

1. What does this permit-to-install and operate ("PTIO") allow me to do?

This permit allows you to install and operate the emissions unit(s) identified in this PTIO. You must install and operate the unit(s) in accordance with the application you submitted and all the terms and conditions contained in this PTIO, including emission limits and those terms that ensure compliance with the emission limits (for example, operating, recordkeeping and monitoring requirements).

2. Who is responsible for complying with this permit?

The person identified on the "Authorization" page, above, is responsible for complying with this permit until the permit is revoked, terminated, or transferred. "Person" means a person, firm, corporation, association, or partnership. The words "you," "your," or "permittee" refer to the "person" identified on the "Authorization" page above.

The permit applies only to the emissions unit(s) identified in the permit. If you install or modify any other equipment that requires an air permit, you must apply for an additional PTIO(s) for these sources.

3. What records must I keep under this permit?

You must keep all records required by this permit, including monitoring data, test results, strip-chart recordings, calibration data, maintenance records, and any other record required by this permit for five years from the date the record was created. You can keep these records electronically, provided they can be made available to Ohio EPA during an inspection at the facility. Failure to make requested records available to Ohio EPA upon request is a violation of this permit requirement.

4. What are my permit fees and when do I pay them?

There are two fees associated with permitted air contaminant sources in Ohio:

PTIO fee. This one-time fee is based on a fee schedule in accordance with Ohio Revised Code (ORC) section 3745.11, or based on a time and materials charge for permit application review and permit processing if required by the Director.

You will be sent an invoice for this fee after you receive this PTIO and payment is due within 30 days of the invoice date. You are required to pay the fee for this PTIO even if you do not install or modify your operations as authorized by this permit.

Annual emissions fee. Ohio EPA will assess a separate fee based on the total annual emissions from your facility. You self-report your emissions in accordance with Ohio Administrative Code (OAC) Chapter 3745-78. This fee assessed is based on a fee schedule in ORC section 3745.11 and funds Ohio EPA's permit compliance oversight activities. For facilities that are permitted as synthetic minor sources, the fee schedule is adjusted annually for inflation. Ohio EPA will notify you when it is time to report your emissions and to pay your annual emission fees.

5. When does my PTIO expire, and when do I need to submit my renewal application?

This permit expires on the date identified at the beginning of this permit document (see "Authorization" page above) and you must submit a renewal application to renew the permit. Ohio EPA will send a renewal notice to you approximately six months prior to the expiration date of this permit. However, it is

very important that you submit a complete renewal permit application (postmarked prior to expiration of this permit) even if you do not receive the renewal notice.

If a complete renewal application is submitted before the expiration date, Ohio EPA considers this a timely application for purposes of ORC section 119.06, and you are authorized to continue operating the emissions unit(s) covered by this permit beyond the expiration date of this permit until final action is taken by Ohio EPA on the renewal application.

6. What happens to this permit if my project is delayed or I do not install or modify my source?

This PTIO expires 18 months after the issue date identified on the "Authorization" page above unless otherwise specified if you have not (1) started constructing the new or modified emission sources identified in this permit, or (2) entered into a binding contract to undertake such construction. This deadline can be extended by up to 12 months, provided you apply to Ohio EPA for this extension within a reasonable time before the 18-month period has ended and you can show good cause for any such extension.

7. What reports must I submit under this permit?

An annual permit evaluation report (PER) is required in addition to any malfunction reporting required by OAC rule 3745-15-06 or other specific rule-based reporting requirement identified in this permit. Your PER due date is identified in the Authorization section of this permit.

8. If I am required to obtain a Title V operating permit in the future, what happens to the operating provisions and PER obligations under this permit?

If you are required to obtain a Title V permit under OAC Chapter 3745-77 in the future, the permit-to-operate portion of this permit will be superseded by the issued Title V permit. From the effective date of the Title V permit forward, this PTIO will effectively become a PTI (permit-to-install) in accordance with OAC rule 3745-31-02(B). The following terms and conditions of this permit will no longer be applicable after issuance of the Title V permit: Section B, Term 1.b) and Section C, for each emissions unit, Term a)(2).

The PER requirements in this permit remain effective until the date the Title V permit is issued and is effective, and cease to apply after the effective date of the Title V permit. The final PER obligation will cover operations up to the effective date of the Title V permit and must be submitted on or before the submission deadline identified in this permit on the last day prior to the effective date of the Title V permit.

9. What are my obligations when I perform scheduled maintenance on air pollution control equipment?

You must perform scheduled maintenance of air pollution control equipment in accordance with OAC rule 3745-15-06(A). If scheduled maintenance requires shutting down or bypassing any air pollution control equipment, you must also shut down the emissions unit(s) served by the air pollution control equipment during maintenance, unless the conditions of OAC rule 3745-15-06(A)(3) are met. Any emissions that exceed permitted amount(s) under this permit (unless specifically exempted by rule) must be reported as deviations in the annual permit evaluation report (PER), including nonexempt excess emissions that occur during approved scheduled maintenance.

10. Do I have to report malfunctions of emissions units or air pollution control equipment? If so, how must I report?

If you have a reportable malfunction of any emissions unit(s) or any associated air pollution control system, you must report this to the [DO/LAA] in accordance with OAC rule 3745-15-06(B). Malfunctions that must be reported are those that result in emissions that exceed permitted emission levels. It is your responsibility to evaluate control equipment breakdowns and operational upsets to determine if a reportable malfunction has occurred.

If you have a malfunction, but determine that it is not a reportable malfunction under OAC rule 3745-15-06(B), it is recommended that you maintain records associated with control equipment breakdown or process upsets. Although it is not a requirement of this permit, Ohio EPA recommends that you maintain records for non-reportable malfunctions.

11. Can Ohio EPA or my local air agency inspect the facility where the emission unit(s) is/are located?

Yes. Under Ohio law, the Director or his authorized representative may inspect the facility, conduct tests, examine records or reports to determine compliance with air pollution laws and regulations and the terms and conditions of this permit. You must provide, within a reasonable time, any information Ohio EPA requests either verbally or in writing.

12. What happens if one or more emissions units operated under this permit is/are shut down permanently?

Ohio EPA can terminate the permit terms associated with any permanently shut down emissions unit. "Shut down" means the emissions unit has been physically removed from service or has been altered in such a way that it can no longer operate without a subsequent "modification" or "installation" as defined in OAC Chapter 3745-31.

You should notify Ohio EPA of any emissions unit that is permanently shut down by submitting a certification that identifies the date on which the emissions unit was permanently shut down. The certification must be submitted by an authorized official from the facility. You cannot continue to operate an emission unit once the certification has been submitted to Ohio EPA by the authorized official.

You must comply with all recordkeeping and reporting for any permanently shut down emissions unit in accordance with the provisions of the permit, regulations or laws that were enforceable during the period of operation, such as the requirement to submit a PER, air fee emission report, or malfunction report. You must also keep all records relating to any permanently shutdown emissions unit, generated while the emissions unit was in operation, for at least five years from the date the record was generated.

Again, you cannot resume operation of any emissions unit certified by the authorized official as being permanently shut down without first applying for and obtaining a permit pursuant to OAC Chapter 3745-31.

13. Can I transfer this permit to a new owner or operator?

You can transfer this permit to a new owner or operator. If you transfer the permit, you must follow the procedures in OAC Chapter 3745-31, including notifying Ohio EPA or the local air agency of the change in ownership or operator. Any transferee of this permit must assume the responsibilities of the transferor permit holder.

14. Does compliance with this permit constitute compliance with OAC rule 3745-15-07, "air pollution nuisance"?

This permit and OAC rule 3745-15-07 prohibit operation of the air contaminant source(s) regulated under this permit in a manner that causes a nuisance. Ohio EPA can require additional controls or modification of the requirements of this permit through enforcement orders or judicial enforcement action if, upon investigation, Ohio EPA determines existing operations are causing a nuisance.

15. What happens if a portion of this permit is determined to be invalid?

If a portion of this permit is determined to be invalid, the remainder of the terms and conditions remain valid and enforceable. The exception is where the enforceability of terms and conditions are dependent on the term or condition that was declared invalid.

Final Permit-to-Install and Operate
Aleris Specialty Products, Inc.
Permit Number: P0117668
Facility ID: 0247040798
Effective Date: 12/24/2014

B. Facility-Wide Terms and Conditions

Final Permit-to-Install and Operate

Aleris Specialty Products, Inc.

Permit Number: P0117668

Facility ID: 0247040798

Effective Date: 12/24/2014

1. This permit document constitutes a permit-to-install issued in accordance with ORC 3704.03(F) and a permit-to-operate issued in accordance with ORC 3704.03(G).
 - a) For the purpose of a permit-to-install document, the facility-wide terms and conditions identified below are federally enforceable with the exception of those listed below which are enforceable under state law only.
 - (1) None.
 - b) For the purpose of a permit-to-operate document, the facility-wide terms and conditions identified below are enforceable under state law only with the exception of those listed below which are federally enforceable.
 - (1) None.

Final Permit-to-Install and Operate
Aleris Specialty Products, Inc.
Permit Number: P0117668
Facility ID: 0247040798
Effective Date: 12/24/2014

C. Emissions Unit Terms and Conditions

1. F002, F002 Rotex Screener

Operations, Property and/or Equipment Description:

Rotex Screener

- a) This permit document constitutes a permit-to-install issued in accordance with ORC 3704.03(F) and a permit-to-operate issued in accordance with ORC 3704.03(G).
 - (1) For the purpose of a permit-to-install document, the emissions unit terms and conditions identified below are federally enforceable with the exception of those listed below which are enforceable under state law only.
 - a. c)(1) and d)(3)
 - (2) For the purpose of a permit-to-operate document, the emissions unit terms and conditions identified below are enforceable under state law only with the exception of those listed below which are federally enforceable.
 - a. None.
- b) Applicable Emissions Limitations and/or Control Requirements
 - (1) The specific operation(s), property, and/or equipment that constitute each emissions unit along with the applicable rules and/or requirements and with the applicable emissions limitations and/or control measures are identified below. Emissions from each unit shall not exceed the listed limitations, and the listed control measures shall be specified in narrative form following the table.

| | Applicable Rules/Requirements | Applicable Emissions Limitations/Control Measures |
|----|--|--|
| a. | OAC rule 3745-31-05(A)(3), as effective 11/30/01 | Fugitive PE shall not exceed 1.7 tons per year. Visible PE from any opening of the building housing this air contaminant source shall not exceed 10% opacity as a 3-minute average. See Sections b)(2)a, b)(2)b, and b)(2)c below. |
| b. | OAC rule 3745-31-05(A)(3), as effective 12/01/06 | See Section b)(2)f below. |
| c. | OAC rule 3745-17-07(B) | See Section b)(2)d below. |
| d. | OAC rule 3745-17-08(B) | See Section b)(2)e below. |
| e. | OAC rule 3745-31-05(D)(1)(b) | PE (fugitive) shall not exceed 1.7 tons per year as a rolling, 12-month summation. See Section c)(1) below. |

(2) Additional Terms and Conditions

- a. Best available control measures (BACM) shall be employed to minimize fugitive PE. BACM shall include, but not be limited to, containing operations within the building and using good engineering practices.
- b. The permittee has satisfied the Best Available Technology (BAT) requirements pursuant to OAC paragraph 3745-31-05(A)(3), as effective November 30, 2001, in this permit. On December 1, 2006, paragraph (A)(3) of OAC rule 3745-31-05 was revised to conform to ORC changes effective August 3, 2006 (S.B. 265 changes), such that BAT is no longer required by State regulations for NAAQS pollutants less than ten tons per year. However, that rule revision has not yet been approved by U.S. EPA as a revision to Ohio's State Implementation Plan (SIP). Therefore, until the SIP revision occurs and the U.S. EPA approves the revisions to OAC rule 3745-31-05, the requirement to satisfy BAT still exists as part of the federally-approved SIP for Ohio. Once U.S. EPA approves the December 1, 2006, version of 3745-31-05, then these emission limits/control measures no longer apply.
- c. BACM required by OAC rule 3745-31-05(A)(3) that are employed for this emissions unit shall be considered adequate if compliance with the visible PE limitation contained in OAC rule 3745-31-05(A)(3) is achieved.
- d. This emissions unit is exempt from the visible PE limitations specified in OAC rule 3745-17-07(B) pursuant to OAC rule 3745-17-07(B)(11)(e).
- e. This emissions unit is not located within an "Appendix A" area as identified in OAC rule 3745-17-08. Therefore, pursuant to OAC rule 3745-17-08(A), this emissions unit is exempt from the requirements of OAC rule 3745-17-07(B).
- f. This rule paragraph applies once U.S. EPA approves the December 1, 2006, version of OAC rule 3745-31-05 as part of the State Implementation Plan.

The Best Available Technology (BAT) requirements under OAC rule 3745-31-05(A)(3) do not apply to the particulate emissions (PE) from this air contaminant source since the uncontrolled potential to emit for PE is less than 10 tons per year.

c) Operational Restrictions

- (1) The hours of operation of this emissions unit shall be limited to 7488 hours on a rolling, 12-month basis.

d) Monitoring and/or Recordkeeping Requirements

- (1) The permittee shall perform daily checks, when the emissions unit is in operation and when the weather conditions allow, for any visible emissions of fugitive dust from any non-stack egress points (i.e., building windows, doors, roof monitors, etc.) serving this emissions unit. The presence or absence of any visible emissions shall be noted in an

operations log. If visible emissions are observed, the permittee shall also note the following in the operations log:

- a. the location and color of the emissions;
- b. whether the emissions are representative of normal operations;
- c. if the emissions are not representative of normal operations, the cause of the abnormal emissions;
- d. the total duration of any visible emission incident; and
- e. any corrective actions taken to minimize or eliminate the visible emissions.

If visible emissions are present, a visible emission incident has occurred. The observer does not have to document the exact start and end times for the visible emission incident under item (d) above or continue the daily check until the incident has ended. The observer may indicate that the visible emission incident was continuous during the observation period (or, if known, continuous during the operation of the emissions unit). With respect to the documentation of corrective actions, the observer may indicate that no corrective actions were taken if the visible emissions were representative of normal operations, or specify the minor corrective actions that were taken to ensure that the emission unit continued to operate under normal conditions, or specify the corrective actions that were taken to eliminate abnormal visible emissions.

A visible emission incident does not necessarily constitute a violation of the visible PE emission limitation in b(1)a established pursuant to OAC rule 3745-31-05(A)(3). A visible emission incident which exceeds the visible PE emission limitation in b(1)a observed in accordance with Method 9 of 40 CFR Part 60, Appendix A, shall constitute a violation of the visible PE emission limitation established pursuant to OAC rule 3745-31-05(A)(3).

- (2) The permittee may, upon receipt of written approval from the appropriate Ohio EPA District Office or local air agency, modify the above-mentioned frequencies for performing the visible emission checks if operating experience indicates that less frequent visible emissions checks would be sufficient to ensure compliance with the above-mentioned applicable requirements.
 - (3) The permittee shall maintain an operations log for this emissions unit. This operations log shall contain, at a minimum, the following information:
 - a. The total number of hours of operation for each month; and
 - b. The amount of material processed, in tons per month.
- e) Reporting Requirements
- (1) The permittee shall submit an annual Permit Evaluation Report (PER) to the Ohio EPA. The PER must be submitted by the due date identified in the Authorization section of this permit. The PER shall cover a reporting period of no more than 12 months for each air contaminant source identified in this permit.

- (2) The permittee shall identify in the annual PER (a) all days during which any visible emissions of fugitive dust were observed from the egress points (i.e., building windows, doors, roof monitors, etc.) serving this emissions unit and (b) describe any corrective actions taken to minimize or eliminate the visible emissions during the 12-month reporting period for this emissions unit.
- (3) All applications, notifications or reports required by the terms and conditions in this permit to be submitted or “reported in writing” are to be submitted to Ohio EPA through Ohio EPA’s eBusiness Center: Air Services web service (“Air Services”). Ohio EPA will accept hard copy submittals on an as-needed basis if the permittee cannot submit the required documents through the Ohio EPA eBusiness Center. In the event of an alternative hard copy submission in lieu of the eBusiness Center, the post-marked date or the date the document is delivered in person will be recognized as the date submitted. Electronic submission of applications, notifications, or reports required to be submitted to Ohio EPA fulfills the requirement to submit the required information to the Director, the District Office or Local Air Agency, and/or any other individual or organization specifically identified as an additional recipient identified in this permit unless otherwise specified. Consistent with OAC rule 3745-15-03, the required application, notification, or report is considered to be “submitted” on the date the submission is successful using a valid electronic signature. Signature by the signatory authority may be represented as provided through procedures established by Air Services.

f) Testing Requirements

- (1) Compliance with the Emissions Limitations and/or Control Requirements specified in section b) of these terms and conditions shall be determined in accordance with the following methods:

- a. Emission Limitation:

PE (fugitive) shall not exceed 1.7 tons per year as a rolling, 12-month summation.

- Applicable Compliance Method:

- i. Compliance with the annual particulate emission rate for fugitive emissions shall be assumed as long as compliance with the operating hours restriction in Section c)(1) is maintained.

- ii. The fugitive particulate emission limitation is based upon the following equation:

$$E = (1.5 \text{ tons/hr}) \times (0.30 \text{ lb PE/ton}) \times (7488 \text{ hrs/yr}) \times (1 \text{ ton}/2000 \text{ lbs})$$

Where

1.5 tons/hr = maximum quantity of material processed, in ton(s) per hour;

0.30 lb PE/ton = emissions factor from AP-42, Section 11.19, Table 11.19.2-2, uncontrolled fines screening;

Final Permit-to-Install and Operate

Aleris Specialty Products, Inc.

Permit Number: P0117668

Facility ID: 0247040798

Effective Date: 12/24/2014

7488 hrs/yr = maximum allowable hours of operation per year; and

1 ton/2000 lbs = conversion of pounds to tons.

b. Emission Limitation:

Visible PE from any opening of the building housing this air contaminant source shall not exceed 10% opacity as a 3-minute average.

Applicable Compliance Method:

If required, compliance with the above emission limitation shall be determined in accordance with 40 CFR Part 60, Appendix A, Method 9, and the procedures specified in OAC rule 3745-17-03(B)(3).

g) Miscellaneous Requirements

(1) None.

2. P901, P901 AP 5400 Shr.

Operations, Property and/or Equipment Description:

AP 5400 Shredder (formerly P001) modified in 2009

a) This permit document constitutes a permit-to-install issued in accordance with ORC 3704.03(F) and a permit-to-operate issued in accordance with ORC 3704.03(G).

(1) For the purpose of a permit-to-install document, the emissions unit terms and conditions identified below are federally enforceable with the exception of those listed below which are enforceable under state law only.

a. c)(2) and d)(5)

(2) For the purpose of a permit-to-operate document, the emissions unit terms and conditions identified below are enforceable under state law only with the exception of those listed below which are federally enforceable.

a. None.

b) Applicable Emissions Limitations and/or Control Requirements

(1) The specific operation(s), property, and/or equipment that constitute each emissions unit along with the applicable rules and/or requirements and with the applicable emissions limitations and/or control measures are identified below. Emissions from each unit shall not exceed the listed limitations, and the listed control measures shall be specified in narrative form following the table.

| | Applicable Rules/Requirements | Applicable Emissions Limitations/Control Measures |
|----|-------------------------------|--|
| a. | OAC rule 3745-31-05(A)(3) | <p>Particulate emissions (PE) from the stack associated with this emissions unit shall not exceed 1.7 pounds per hour, 1060.8 pounds per month, and 6.3 tons per year.</p> <p>Visible PE from the stack associated with this emissions unit shall not exceed 10% opacity as a 6-minute average.</p> <p>Visible PE from any opening of the building housing this air contaminant source shall not exceed 10% opacity as a 3-minute average.</p> <p>See b)(2)a, b)(2)b and b)(2)c.</p> |
| b. | OAC rule 3745-31-05(D)(1)(b) | <p>PE (fugitive and stack) shall not exceed 9.4 tons per year as a rolling, 12-month summation.</p> <p>See c)(2).</p> |

Final Permit-to-Install and Operate

Aleris Specialty Products, Inc.

Permit Number: P0117668

Facility ID: 0247040798

Effective Date: 12/24/2014

| | Applicable Rules/Requirements | Applicable Emissions Limitations/Control Measures |
|----|-------------------------------|---|
| c. | OAC rule 3745-17-07(A)(1) | The visible PE limitation specified by this rule is less stringent than the visible PE emission limitation established pursuant to OAC rule 3745-31-05(A)(3). |
| d. | OAC rule 3745-17-07(B) | See b)(2)d. |
| e. | OAC rule 3745-17-08(B) | See b)(2)e. |
| f. | OAC rule 3745-17-11(B)(1) | The PE limitation specified by this rule is less stringent than the PE limitation established pursuant to OAC rule 3745-31-05(A)(3). |

(2) Additional Terms and Conditions

- a. The emissions from this emissions unit shall be vented to a baghouse at all times the emissions unit is in operation.
- b. Best available control measures (BACM) shall be employed to minimize fugitive particulate emissions. BACM shall include, but not be limited to, using a baghouse for dust collection, containing operations within the building, and using good engineering practices.
- c. BACM required by OAC rule 3745-31-05(A)(3) that are employed for this emissions unit shall be considered adequate if compliance with the visible particulate emission limitation contained in OAC rule 3745-31-05(A)(3) is achieved.
- d. This emissions unit is exempt from the visible PE limitations specified in OAC rule 3745-17-07(B) pursuant to OAC rule 3745-17-07(B)(11)(e).
- e. This emissions unit is not located within an "Appendix A" area as identified in OAC rule 3745-17-08. Therefore, pursuant to OAC rule 3745-17-08(A), this emissions unit is exempt from the requirements of OAC rule 3745-17-07(B).

c) Operational Restrictions

- (1) The permittee shall not operate this emissions unit without use of the baghouse for dust collection.
- (2) The hours of operation of this emissions unit shall be limited to 7488 hours on a rolling, 12-month basis.

d) Monitoring and/or Recordkeeping Requirements

- (1) The permittee shall perform daily checks, when the emissions unit is in operation and when the weather conditions allow, for any visible emissions from the exhaust stack serving this emissions unit and for any visible emissions of fugitive dust from any non-stack egress points (i.e., building windows, doors, roof monitors, etc.) serving this

emissions unit. The presence or absence of any visible emissions shall be noted in an operations log. If visible emissions are observed, the permittee shall also note the following in the operations log:

- a. the location and color of the emissions;
- b. whether the emissions are representative of normal operations;
- c. if the emissions are not representative of normal operations, the cause of the abnormal emissions;
- d. the total duration of any visible emission incident; and
- e. any corrective actions taken to minimize or eliminate the visible emissions.

If visible emissions are present, a visible emission incident has occurred. The observer does not have to document the exact start and end times for the visible emission incident under item (d) above or continue the daily check until the incident has ended. The observer may indicate that the visible emission incident was continuous during the observation period (or, if known, continuous during the operation of the emissions unit). With respect to the documentation of corrective actions, the observer may indicate that no corrective actions were taken if the visible emissions were representative of normal operations, or specify the minor corrective actions that were taken to ensure that the emissions unit continued to operate under normal conditions, or specify the corrective actions that were taken to eliminate abnormal visible emissions.

A visible emission incident does not necessarily constitute a violation of the visible PE emission limitation in b(1)a established pursuant to OAC rule 3745-31-05(A)(3). A visible emission incident which exceeds the visible PE emission limitation in b(1)a observed in accordance with Method 9 of 40 CFR Part 60, Appendix A, shall constitute a violation of the visible PE emission limitation established pursuant to OAC rule 3745-31-05(A)(3).

- (2) The permittee may, upon receipt of written approval from the appropriate Ohio EPA District Office or local air agency, modify the above-mentioned frequencies for performing the visible emission checks if operating experience indicates that less frequent visible emissions checks would be sufficient to ensure compliance with the above-mentioned applicable requirements.
- (3) The acceptable range for the pressure drop across the baghouse shall be based upon the manufacturer's specifications, until such time as any required performance testing is conducted and/or an alternative pressure drop range and/or limit is established. The established pressure drop range shall include the manufacturer's specified pressure drop range.
- (4) The permittee shall properly install, operate, and maintain equipment to continuously monitor the pressure drop, in inches of water, across the baghouse when the controlled emissions unit is in operation, including periods of startup and shutdown. The permittee shall record the pressure drop across the baghouse on a daily basis. The monitoring equipment shall be installed, calibrated, operated, and maintained in accordance with

the manufacturer's recommendations, instructions, and operating manual(s), with any modifications deemed necessary by the permittee.

Whenever the monitored value for the pressure drop deviates from the limit or range established in accordance with this permit, the permittee shall promptly investigate the cause of the deviation. The permittee shall maintain records of the following information for each investigation:

- a. the date and time the deviation began;
- b. the magnitude of the deviation at that time (i.e.; the actual value versus the established acceptable range);
- c. the date the investigation was conducted;
- d. the name(s) of the personnel who conducted the investigation; and
- e. the findings and recommendations.

In response to each required investigation to determine the cause of a deviation, the permittee shall take prompt corrective action to bring the operation of the control equipment within the acceptable range specified in this permit, unless the permittee determines that corrective action is not necessary and documents the reasons for that determination and the date and time the deviation ended. The permittee shall maintain records of the following information for each corrective action taken.

- f. a description of the corrective action;
- g. the date corrective action was completed;
- h. the date and time the deviation ended;
- i. the total period of time (in minutes) during which there was a deviation;
- j. the pressure drop readings immediately after the corrective action was implemented; and
- k. the name(s) of the personnel who performed the work.

Investigation and records required by this paragraph do not eliminate the need to comply with the requirements of OAC rule 3745-15-06 if it is determined that a malfunction has occurred.

This range of the pressure drop across the baghouse is effective for the duration of this permit, unless revisions are requested by the permittee and approved in writing by the Ohio EPA Northeast District Office. The permittee may request revisions to the permitted range for the pressure drop based upon information obtained during future testing that demonstrate compliance with the allowable particulate emission rate for the controlled emissions unit. In addition, approved revisions to the range will not constitute a relaxation of the monitoring requirements of this permit and may be incorporated into this permit by means of an administrative modification.

- (5) The permittee shall maintain an operations log for this emissions unit. This operations log shall contain, at a minimum, the following information:
 - a. the total number of hours of operation for each month; and
 - b. the amount of material processed, in tons per month.
- e) Reporting Requirements
 - (1) The permittee shall submit an annual Permit Evaluation Report (PER) to the Ohio EPA. The PER must be submitted by the due date identified in the Authorization section of this permit. The PER shall cover a reporting period of no more than 12 months for each air contaminant source identified in this permit.
 - (2) The permittee shall identify in the annual PER the following information concerning the operations of the baghouse during the 12-month reporting period for this emissions unit:
 - a. each period of time (start time and date, and end time and date) when the pressure drop across the baghouse was outside of the acceptable range;
 - b. any period of time (start time and date, and end time and date) when the emissions unit was in operation and the process emissions were not vented to the baghouse;
 - c. each incident of deviation described in "a" (above) where a prompt investigation was not conducted;
 - d. each incident of deviation described in "a" where prompt corrective action, that would bring the pressure drop into compliance with the acceptable range, was determined to be necessary and was not taken; and
 - e. each incident of deviation described in "a" where proper records were not maintained for the investigation and/or the corrective action(s), as identified in the monitoring and record keeping requirements of this permit.
 - (3) The permittee shall identify in the annual PER (a) all days during which any visible particulate emissions were observed from the exhaust stack serving this emissions unit and (b) describe any corrective actions taken to minimize or eliminate the visible particulate emissions during the 12-month reporting period for this emissions unit.
 - (4) The permittee shall identify in the annual PER (a) all days during which any visible emissions of fugitive dust were observed from the egress points (i.e., building windows, doors, roof monitors, etc.) serving this emissions unit and (b) describe any corrective actions taken to minimize or eliminate the visible emissions during the 12-month reporting period for this emissions unit.
 - (5) All applications, notifications or reports required by the terms and conditions in this permit to be submitted or "reported in writing" are to be submitted to Ohio EPA through Ohio EPA's eBusiness Center: Air Services web service ("Air Services"). Ohio EPA will accept hard copy submittals on an as-needed basis if the permittee cannot submit the required documents through the Ohio EPA eBusiness Center. In the event of an

alternative hard copy submission in lieu of the eBusiness Center, the post-marked date or the date the document is delivered in person will be recognized as the date submitted. Electronic submission of applications, notifications, or reports required to be submitted to Ohio EPA fulfills the requirement to submit the required information to the Director, the District Office or Local Air Agency, and/or any other individual or organization specifically identified as an additional recipient identified in this permit unless otherwise specified. Consistent with OAC rule 3745-15-03, the required application, notification, or report is considered to be "submitted" on the date the submission is successful using a valid electronic signature. Signature by the signatory authority may be represented as provided through procedures established by Air Services.

f) Testing Requirements

(1) Compliance with the Emissions Limitations and/or Control Requirements specified in section b) of these terms and conditions shall be determined in accordance with the following methods:

a. Emission Limitation:

PE from the stack associated with this emissions unit shall not exceed 1.7 pounds per hour, 1060.8 pounds per month, and 6.3 tons per year.

Applicable Compliance Method:

i. If required, compliance with the particulate emission rate of 1.7 pounds per hour shall be determined in accordance with 40 CFR Part 60, Appendix A, Methods 1 through 5 and the procedures in OAC rule 3745-17-03.

ii. The permittee may determine the monthly particulate emission rate from the stack associated with this emissions unit by the following calculation:

$$E = T \times (0.112 \text{ lb/ton})$$

Where

E = monthly particulate emission rate in tons per month;

T = tons of material processed monthly in this emissions unit; and

0.112 lb/ton = controlled particulate emission factor based upon actual emission testing of this source conducted on 08/24/10.

iii. The permittee may determine the annual particulate emission rate from the stack associated with this emissions unit by summing the monthly emissions in Section f)(1)a.ii on an annual basis.

b. Emission Limitation:

PE (fugitive and stack) shall not exceed 9.4 tons per year as a rolling, 12-month summation.

Final Permit-to-Install and Operate

Aleris Specialty Products, Inc.

Permit Number: P0117668

Facility ID: 0247040798

Effective Date: 12/24/2014

Applicable Compliance Method:

Compliance with the annual particulate emission rate for fugitive and stack emissions shall be assumed as long as compliance with the operating hours restriction in c)(2) is maintained.

A fugitive particulate emission factor of 0.055 lb/ton, based upon actual emission testing of this source conducted on 08/24/10 and back-calculating inlet and fugitive emissions from the test results, was used to calculate annual fugitive particulate emissions of 3.1 tons per year. Therefore, total PE (fugitive and stack) is: 3.1 tons/yr + 6.3 tons/yr = 9.4 tons/yr.

c. Emission Limitation:

Visible PE from the stack associated with this emissions unit shall not exceed 10% opacity as a 6-minute average.

Applicable Compliance Method:

If required, compliance with the above emission limitation shall be determined in accordance with 40 CFR Part 60, Appendix A, Method 9, and the procedures specified in OAC rule 3745-17-03(B)(1).

d. Emission Limitation:

Visible PE from any opening of the building housing this air contaminant source shall not exceed 10% opacity as a 3-minute average.

Applicable Compliance Method:

If required, compliance with the above emission limitation shall be determined in accordance with 40 CFR Part 60, Appendix A, Method 9, and the procedures specified in OAC rule 3745-17-03(B)(3).

g) **Miscellaneous Requirements**

(1) None.

3. P902, P902 Magnatech Shr.

Operations, Property and/or Equipment Description:

P902 Magnatech Shredder

a) This permit document constitutes a permit-to-install issued in accordance with ORC 3704.03(F) and a permit-to-operate issued in accordance with ORC 3704.03(G).

(1) For the purpose of a permit-to-install document, the emissions unit terms and conditions identified below are federally enforceable with the exception of those listed below which are enforceable under state law only.

a. c)(2) and d)(5)

(2) For the purpose of a permit-to-operate document, the emissions unit terms and conditions identified below are enforceable under state law only with the exception of those listed below which are federally enforceable.

a. None.

b) Applicable Emissions Limitations and/or Control Requirements

(1) The specific operation(s), property, and/or equipment that constitute each emissions unit along with the applicable rules and/or requirements and with the applicable emissions limitations and/or control measures are identified below. Emissions from each unit shall not exceed the listed limitations, and the listed control measures shall be specified in narrative form following the table.

| | Applicable Rules/Requirements | Applicable Emissions Limitations/Control Measures |
|----|-------------------------------|---|
| a. | OAC rule 3745-31-05(A)(3) | Particulate emissions (PE) from the stack associated with this emissions unit shall not exceed 0.41 pounds per hour, 255.8 pounds per month, and 1.52 tons per year. Fugitive PE shall not exceed 0.73 ton per year. Visible PE from any opening of the building housing this air contaminant source shall not exceed 10% opacity as a 3-minute average. Visible PE from the stack associated with this emissions unit shall not exceed 10% opacity as a 6-minute average. See b)(2)a, b)(2)b and b)(2)c. |

Final Permit-to-Install and Operate

Aleris Specialty Products, Inc.

Permit Number: P0117668

Facility ID: 0247040798

Effective Date: 12/24/2014

| | Applicable Rules/Requirements | Applicable Emissions Limitations/Control Measures |
|----|-------------------------------|--|
| b. | OAC rule 3745-31-05(D)(1)(b) | PE (fugitive and stack) shall not exceed 2.3 tons per year as a rolling, 12-month summation. See c)(2). |
| c. | OAC rule 3745-17-07(A)(1) | The visible PE limitation specified by this rule is less stringent than the visible PE limitation established pursuant to OAC rule 3745-31-05(A)(3). |
| d. | OAC rule 3745-17-07(B) | See b)(2)d. |
| e. | OAC rule 3745-17-08(B) | See b)(2)e. |
| f. | OAC rule 3745-17-11(B)(1) | The PE limitation specified by this rule is less stringent than the PE limitation established pursuant to OAC rule 3745-31-05(A)(3). |

(2) Additional Terms and Conditions

- a. Best available control measures (BACM) shall be employed to minimize fugitive PE. BACM shall include, but not be limited to, using a baghouse for dust collection, containing operations within the building, and using good engineering practices.
- b. BACM required by OAC rule 3745-31-05(A)(3) that are employed for this emissions unit shall be considered adequate if compliance with the visible PE limitation contained in OAC rule 3745-31-05(A)(3) is achieved.
- c. The emissions from this emissions unit shall be vented to a baghouse at all times the emissions unit is in operation.
- d. This emissions unit is exempt from the visible PE limitations specified in OAC rule 3745-17-07(B) pursuant to OAC rule 3745-17-07(B)(11)(e).
- e. This emissions unit is not located within an "Appendix A" area as identified in OAC rule 3745-17-08. Therefore, pursuant to OAC rule 3745-17-08(A), this emissions unit is exempt from the requirements of OAC rule 3745-17-07(B).

c) Operational Restrictions

- (1) The permittee shall not operate this emissions unit without use of the baghouse for dust collection.
- (2) The hours of operation of this emissions unit shall be limited to 7488 hours on a rolling, 12-month basis.

d) **Monitoring and/or Recordkeeping Requirements**

- (1) The permittee shall perform daily checks, when the emissions unit is in operation and when the weather conditions allow, for any visible emissions from the exhaust stack serving this emissions unit and for any visible emissions of fugitive dust from any non-stack egress points (i.e., building windows, doors, roof monitors, etc.) serving this emissions unit. The presence or absence of any visible emissions shall be noted in an operations log. If visible emissions are observed, the permittee shall also note the following in the operations log:
 - a. the location and color of the emissions;
 - b. whether the emissions are representative of normal operations;
 - c. if the emissions are not representative of normal operations, the cause of the abnormal emissions;
 - d. the total duration of any visible emission incident; and
 - e. any corrective actions taken to minimize or eliminate the visible emissions.

If visible emissions are present, a visible emission incident has occurred. The observer does not have to document the exact start and end times for the visible emission incident under item (d) above or continue the daily check until the incident has ended. The observer may indicate that the visible emission incident was continuous during the observation period (or, if known, continuous during the operation of the emissions unit). With respect to the documentation of corrective actions, the observer may indicate that no corrective actions were taken if the visible emissions were representative of normal operations, or specify the minor corrective actions that were taken to ensure that the emission unit continued to operate under normal conditions, or specify the corrective actions that were taken to eliminate abnormal visible emissions.

A visible emission incident does not necessarily constitute a violation of the visible PE emission limitation in b(1)a established pursuant to OAC rule 3745-31-05(A)(3). A visible emission incident which exceeds the visible PE emission limitation in b(1)a observed in accordance with Method 9 of 40 CFR Part 60, Appendix A, shall constitute a violation of the visible PE emission limitation established pursuant to OAC rule 3745-31-05(A)(3).

- (2) The permittee may, upon receipt of written approval from the appropriate Ohio EPA District Office or local air agency, modify the above-mentioned frequencies for performing the visible emission checks if operating experience indicates that less frequent visible emissions checks would be sufficient to ensure compliance with the above-mentioned applicable requirements.
- (3) The acceptable range for the pressure drop across the baghouse shall be based upon the manufacturer's specifications, until such time as any required performance testing is conducted and/or an alternative pressure drop range and/or limit is established. The established pressure drop range shall include the manufacturer's specified pressure drop range.

- (4) The permittee shall properly install, operate, and maintain equipment to continuously monitor the pressure drop, in inches of water, across the baghouse when the controlled emissions unit is in operation, including periods of startup and shutdown. The permittee shall record the pressure drop across the baghouse on a daily basis. The monitoring equipment shall be installed, calibrated, operated, and maintained in accordance with the manufacturer's recommendations, instructions, and operating manual(s), with any modifications deemed necessary by the permittee.

Whenever the monitored value for the pressure drop deviates from the limit or range established in accordance with this permit, the permittee shall promptly investigate the cause of the deviation. The permittee shall maintain records of the following information for each investigation:

- a. the date and time the deviation began;
- b. the magnitude of the deviation at that time (i.e.; the actual value versus the established acceptable range);
- c. the date the investigation was conducted;
- d. the name(s) of the personnel who conducted the investigation; and
- e. the findings and recommendations.

In response to each required investigation to determine the cause of a deviation, the permittee shall take prompt corrective action to bring the operation of the control equipment within the acceptable range specified in this permit, unless the permittee determines that corrective action is not necessary and documents the reasons for that determination and the date and time the deviation ended. The permittee shall maintain records of the following information for each corrective action taken.

- f. a description of the corrective action;
- g. the date corrective action was completed;
- h. the date and time the deviation ended;
- i. the total period of time (in minutes) during which there was a deviation;
- j. the pressure drop readings immediately after the corrective action was implemented; and
- k. the name(s) of the personnel who performed the work.

Investigation and records required by this paragraph do not eliminate the need to comply with the requirements of OAC rule 3745-15-06 if it is determined that a malfunction has occurred.

This range of the pressure drop across the baghouse is effective for the duration of this permit, unless revisions are requested by the permittee and approved in writing by the Ohio EPA Northeast District Office. The permittee may request revisions to the

permitted range for the pressure drop based upon information obtained during future testing that demonstrate compliance with the allowable particulate emission rate for the controlled emissions unit. In addition, approved revisions to the range will not constitute a relaxation of the monitoring requirements of this permit and may be incorporated into this permit by means of an administrative modification.

- (5) The permittee shall maintain an operations log for this emissions unit. This operations log shall contain, at a minimum, the following information:
 - a. the total number of hours of operation for each month; and
 - b. the amount of material processed, in tons per month.

e) Reporting Requirements

- (1) The permittee shall submit an annual Permit Evaluation Report (PER) to the Ohio EPA. The PER must be submitted by the due date identified in the Authorization section of this permit. The PER shall cover a reporting period of no more than 12 months for each air contaminant source identified in this permit.
- (2) The permittee shall identify in the annual PER the following information concerning the operations of the baghouse during the 12-month reporting period for this emissions unit:
 - a. each period of time (start time and date, and end time and date) when the pressure drop across the baghouse was outside of the acceptable range;
 - b. any period of time (start time and date, and end time and date) when the emissions unit was in operation and the process emissions were not vented to the baghouse;
 - c. each incident of deviation described in "a" (above) where a prompt investigation was not conducted;
 - d. each incident of deviation described in "a" where prompt corrective action, that would bring the pressure drop into compliance with the acceptable range, was determined to be necessary and was not taken; and
 - e. each incident of deviation described in "a" where proper records were not maintained for the investigation and/or the corrective action(s), as identified in the monitoring and record keeping requirements of this permit.
- (3) The permittee shall identify in the annual PER (a) all days during which any visible particulate emissions were observed from the exhaust stack serving this emissions unit and (b) describe any corrective actions taken to minimize or eliminate the visible particulate emissions during the 12-month reporting period for this emissions unit.
- (4) The permittee shall identify in the annual PER (a) all days during which any visible emissions of fugitive dust were observed from the egress points (i.e., building windows, doors, roof monitors, etc.) serving this emissions unit and (b) describe any corrective actions taken to minimize or eliminate the visible emissions during the 12-month reporting period for this emissions unit.

- (5) All applications, notifications or reports required by the terms and conditions in this permit to be submitted or “reported in writing” are to be submitted to Ohio EPA through Ohio EPA’s eBusiness Center: Air Services web service (“Air Services”). Ohio EPA will accept hard copy submittals on an as-needed basis if the permittee cannot submit the required documents through the Ohio EPA eBusiness Center. In the event of an alternative hard copy submission in lieu of the eBusiness Center, the post-marked date or the date the document is delivered in person will be recognized as the date submitted. Electronic submission of applications, notifications, or reports required to be submitted to Ohio EPA fulfills the requirement to submit the required information to the Director, the District Office or Local Air Agency, and/or any other individual or organization specifically identified as an additional recipient identified in this permit unless otherwise specified. Consistent with OAC rule 3745-15-03, the required application, notification, or report is considered to be “submitted” on the date the submission is successful using a valid electronic signature. Signature by the signatory authority may be represented as provided through procedures established by Air Services.

f) Testing Requirements

- (1) Compliance with the Emissions Limitations and/or Control Requirements specified in section b) of these terms and conditions shall be determined in accordance with the following methods:

- a. Emission Limitation:

Visible PE from any opening of the building housing this air contaminant source shall not exceed 10% opacity as a 3-minute average.

Applicable Compliance Method:

If required, compliance with the above emission limitation shall be determined in accordance with 40 CFR Part 60, Appendix A, Method 9, and the procedures specified in OAC rule 3745-17-03(B)(3).

- b. Emission Limitation:

PE from the stack associated with this emissions unit shall not exceed 0.41 pounds per hour, 255.8 pounds per month, and 1.52 tons per year.

Applicable Compliance Method:

- i. If required, compliance with the particulate emission rate of 0.41 pounds per hour shall be determined in accordance with 40 CFR Part 60, Appendix A, Methods 1 through 5 and the procedures in OAC rule 3745-17-03.
- ii. The permittee may determine the monthly particulate emission rate from the stack associated with this emissions unit by the following calculation:

$$E = T \times (0.027 \text{ lb/ton})$$

Where

E = hourly particulate emission rate in tons per month;

T = tons of material processed monthly in this emissions unit; and

0.027 lb/ton = controlled particulate emission factor based upon actual emission testing of this source conducted on 08/24/10.

iii. The permittee may determine the annual particulate emission rate from the stack associated with this emissions unit by summing the monthly emissions in Section f)(1)b.ii on an annual basis.

c. Emission Limitation:

PE (fugitive and stack) shall not exceed 2.3 tons per year as a rolling, 12-month summation.

Applicable Compliance Method:

Compliance with the annual particulate emission rate for fugitive and stack emissions shall be assumed as long as compliance with the operating hours restriction in c)(2) is maintained.

d. Emission Limitation:

Visible PE from the stack associated with this emissions unit shall not exceed 10% opacity as a 6-minute average.

Applicable Compliance Method:

If required, compliance with the above emission limitation shall be determined in accordance with 40 CFR Part 60, Appendix A, Method 9, and the procedures specified in OAC rule 3745-17-03(B)(1).

e. Emission Limitation:

Fugitive PE shall not exceed 0.73 ton per year.

Applicable Compliance Method:

The permittee may determine the annual fugitive particulate emission rate from this emissions unit using the following equation:

$$E = (X \text{ tons/yr}) \times (0.013 \text{ lb PE/ton}) \times (1 \text{ ton}/2000 \text{ lbs})$$

where:

X = quantity of material processed, in ton(s) per year; and

0.013 lb PE/ton = fugitive particulate emission factor based upon actual emission testing of this source conducted on 08/24/10 and back-calculating inlet and fugitive emissions from the test results.

Final Permit-to-Install and Operate

Aleris Specialty Products, Inc.

Permit Number: P0117668

Facility ID: 0247040798

Effective Date: 12/24/2014

g) Miscellaneous Requirements

(1) None.

4. P903, P903 FMC Screener

Operations, Property and/or Equipment Description:

FMC Screening Unit

- a) This permit document constitutes a permit-to-install issued in accordance with ORC 3704.03(F) and a permit-to-operate issued in accordance with ORC 3704.03(G).
 - (1) For the purpose of a permit-to-install document, the emissions unit terms and conditions identified below are federally enforceable with the exception of those listed below which are enforceable under state law only.
 - a. c)(1) and d)(3)
 - (2) For the purpose of a permit-to-operate document, the emissions unit terms and conditions identified below are enforceable under state law only with the exception of those listed below which are federally enforceable.
 - a. None.
- b) Applicable Emissions Limitations and/or Control Requirements
 - (1) The specific operation(s), property, and/or equipment that constitute each emissions unit along with the applicable rules and/or requirements and with the applicable emissions limitations and/or control measures are identified below. Emissions from each unit shall not exceed the listed limitations, and the listed control measures shall be specified in narrative form following the table.

| | Applicable Rules/Requirements | Applicable Emissions Limitations/Control Measures |
|----|-------------------------------|---|
| a. | ORC 3704.03(T) | Fugitive PE shall not exceed 16.9 tons per year. Visible PE from any opening of the building housing this air contaminant source shall not exceed 10% opacity as a 3-minute average. See b)(2)a and b)(2)b. |
| b. | OAC rule 3745-31-05(D)(1)(b) | PE shall not exceed 16.9 tons per year as a rolling, 12-month summation. See c)(1). |
| c. | OAC rule 3745-17-07(B) | See b)(2)c. |
| d. | OAC rule 3745-17-08(B) | See b)(2)d. |

(2) Additional Terms and Conditions

- a. Best available control measures (BACM) shall be employed to minimize fugitive PE. BACM shall include, but not be limited to, containing operations within the building and using good engineering practices.
- b. BACM required by OAC rule 3745-31-05(A)(3) that are employed for this emissions unit shall be considered adequate if compliance with the visible PE limitation contained in OAC rule 3745-31-05(A)(3) is achieved.
- c. This emissions unit is exempt from the visible PE limitations specified in OAC rule 3745-17-07(B) pursuant to OAC rule 3745-17-07(B)(11)(e).
- d. This emissions unit is not located within an "Appendix A" area as identified in OAC rule 3745-17-08. Therefore, pursuant to OAC rule 3745-17-08(A), this emissions unit is exempt from the requirements of OAC rule 3745-17-07(B).

c) Operational Restrictions

- (1) The hours of operation of this emissions unit shall be limited to 7488 hours on a rolling, 12-month basis.

d) Monitoring and/or Recordkeeping Requirements

- (1) The permittee shall perform daily checks, when the emissions unit is in operation and when the weather conditions allow, for any visible emissions of fugitive dust from any non-stack egress points (i.e., building windows, doors, roof monitors, etc.) serving this emissions unit. The presence or absence of any visible emissions shall be noted in an operations log. If visible emissions are observed, the permittee shall also note the following in the operations log:
 - a. the location and color of the emissions;
 - b. whether the emissions are representative of normal operations;
 - c. if the emissions are not representative of normal operations, the cause of the abnormal emissions;
 - d. the total duration of any visible emission incident; and
 - e. any corrective actions taken to minimize or eliminate the visible emissions.

If visible emissions are present, a visible emission incident has occurred. The observer does not have to document the exact start and end times for the visible emission incident under item (d) above or continue the daily check until the incident has ended. The observer may indicate that the visible emission incident was continuous during the observation period (or, if known, continuous during the operation of the emissions unit). With respect to the documentation of corrective actions, the observer may indicate that no corrective actions were taken if the visible emissions were representative of normal operations, or specify the minor corrective actions that were taken to ensure that the

emission unit continued to operate under normal conditions, or specify the corrective actions that were taken to eliminate abnormal visible emissions.

A visible emission incident does not necessarily constitute a violation of the visible PE emission limitation in b(1)a established pursuant to OAC rule 3745-31-05(A)(3). A visible emission incident which exceeds the visible PE emission limitation in b(1)a observed in accordance with Method 9 of 40 CFR Part 60, Appendix A, shall constitute a violation of the visible PE emission limitation established pursuant to OAC rule 3745-31-05(A)(3).

- (2) The permittee may, upon receipt of written approval from the appropriate Ohio EPA District Office or local air agency, modify the above-mentioned frequencies for performing the visible emission checks if operating experience indicates that less frequent visible emissions checks would be sufficient to ensure compliance with the above-mentioned applicable requirements.
- (3) The permittee shall maintain an operations log for this emissions unit. This operations log shall contain, at a minimum, the following information:
 - a. the total number of hours of operation for each month; and
 - b. the amount of material processed, in tons per month.

e) Reporting Requirements

- (1) The permittee shall submit an annual Permit Evaluation Report (PER) to the Ohio EPA. The PER must be submitted by the due date identified in the Authorization section of this permit. The PER shall cover a reporting period of no more than 12 months for each air contaminant source identified in this permit.
- (2) The permittee shall identify in the annual PER (a) all days during which any visible emission of fugitive dust were observed from the egress points (i.e., building windows, doors, roof monitors, etc.) serving this emissions unit and (b) describe any corrective actions taken to minimize or eliminate the visible emissions during the 12-month reporting period for this emissions unit.
- (3) All applications, notifications or reports required by the terms and conditions in this permit to be submitted or "reported in writing" are to be submitted to Ohio EPA through Ohio EPA's eBusiness Center: Air Services web service ("Air Services"). Ohio EPA will accept hard copy submittals on an as-needed basis if the permittee cannot submit the required documents through the Ohio EPA eBusiness Center. In the event of an alternative hard copy submission in lieu of the eBusiness Center, the post-marked date or the date the document is delivered in person will be recognized as the date submitted. Electronic submission of applications, notifications, or reports required to be submitted to Ohio EPA fulfills the requirement to submit the required information to the Director, the District Office or Local Air Agency, and/or any other individual or organization specifically identified as an additional recipient identified in this permit unless otherwise specified. Consistent with OAC rule 3745-15-03, the required application, notification, or report is considered to be "submitted" on the date the submission is successful using a valid

electronic signature. Signature by the signatory authority may be represented as provided through procedures established by Air Services.

f) Testing Requirements

(1) Compliance with the Emissions Limitations and/or Control Requirements specified in section b) of these terms and conditions shall be determined in accordance with the following methods:

a. Emission Limitation:

Visible PE from any opening of the building housing this air contaminant source shall not exceed 10% opacity as a 3-minute average.

Applicable Compliance Method:

If required, compliance with the above emission limitation shall be determined in accordance with 40 CFR Part 60, Appendix A, Method 9, and the procedures specified in OAC rule 3745-17-03(B)(3).

b. Emission Limitation:

PE shall not exceed 16.9 tons per year as a rolling, 12-month summation.

Applicable Compliance Method:

Compliance with the annual particulate emission rate for fugitive emissions shall be assumed as long as compliance with the operating hours restriction in c)(2) is maintained.

g) Miscellaneous Requirements

(1) None.

5. P907, P907

Operations, Property and/or Equipment Description:

Rotex 852 Screener

a) This permit document constitutes a permit-to-install issued in accordance with ORC 3704.03(F) and a permit-to-operate issued in accordance with ORC 3704.03(G).

(1) For the purpose of a permit-to-install document, the emissions unit terms and conditions identified below are federally enforceable with the exception of those listed below which are enforceable under state law only.

a. c)(2) and d)(5)

(2) For the purpose of a permit-to-operate document, the emissions unit terms and conditions identified below are enforceable under state law only with the exception of those listed below which are federally enforceable.

a. None.

b) Applicable Emissions Limitations and/or Control Requirements

(1) The specific operation(s), property, and/or equipment that constitute each emissions unit along with the applicable rules and/or requirements and with the applicable emissions limitations and/or control measures are identified below. Emissions from each unit shall not exceed the listed limitations, and the listed control measures shall be specified in narrative form following the table.

| | Applicable Rules/Requirements | Applicable Emissions Limitations/Control Measures |
|----|---|--|
| a. | OAC rule 3745-31-05(A)(3) as effective 11/30/01 | Particulate emissions (PE) from the stack associated with this emissions unit shall not exceed 1.3 pounds per hour, 811.2 pounds per month, and 4.9 tons per year. Fugitive PE shall not exceed 2.4 tons per year. Visible PE from any opening of the building housing this air contaminant source shall not exceed 10% opacity as a 3-minute average. Visible PE from the stack associated with this emissions unit shall not exceed 10% opacity as a 6-minute average. See b)(2)a. |

| | Applicable Rules/Requirements | Applicable Emissions Limitations/Control Measures |
|----|---|---|
| b. | OAC rule 3745-31-05(A)(3) as effective 12/01/06 | See b)(2)b. |
| c. | OAC rule 3745-31-05(D)(1)(b) | PE (fugitive and stack) shall not exceed 7.3 tons per year as a rolling, 12-month summation. See b)(2)g and c)(2). |
| d. | OAC rule 3745-17-07(A)(1) | See b)(2)f. |
| e. | OAC rule 3745-17-07(B) | See b)(2)d. |
| f. | OAC rule 3745-17-08(B) | See b)(2)e. |
| g. | OAC rule 3745-17-11(B)(1) | The PE limitation specified by this rule is less stringent than the PE limitation established pursuant to OAC rules 3745-31-05(A)(3) and 3745-31-05(D)(1)(b). |

(2) Additional Terms and Conditions

- a. The permittee has satisfied the Best Available Technology (BAT) requirements pursuant to OAC paragraph 3745-31-05(A)(3), as effective November 30, 2001, in this permit. On December 1, 2006, paragraph (A)(3) of OAC rule 3745-31-05 was revised to conform to ORC changes effective August 3, 2006 (S.B. 265 changes), such that BAT is no longer required by State regulations for NAAQS pollutants less than ten tons per year. However, that rule revision has not yet been approved by U.S. EPA as a revision to Ohio's State Implementation Plan (SIP). Therefore, until the SIP revision occurs and the U.S. EPA approves the revisions to OAC rule 3745-31-05, the requirement to satisfy BAT still exists as part of the federally-approved SIP for Ohio. Once U.S. EPA approves the December 1, 2006, version of 3745-31-05, then these emission limits/control measures no longer apply.
- b. This rule paragraph applies once U.S. EPA approves the December 1, 2006, version of OAC rule 3745-31-05 as part of the State Implementation Plan.

The Best Available Technology (BAT) requirements under OAC rule 3745-31-05(A)(3) do not apply to the particulate emissions (PE) from this air contaminant source since the controlled potential to emit for PE is less than 10 tons per year.
- c. Best available control measures (BACM) shall be employed to minimize fugitive particulate emissions. BACM shall include, but not be limited to, using a baghouse for dust collection, containing operations within the building and using good engineering practices.
- d. This emissions unit is exempt from the visible PE limitations specified in OAC rule 3745-17-07(B) pursuant to OAC rule 3745-17-07(B)(11)(e).

Final Permit-to-Install and Operate

Aleris Specialty Products, Inc.

Permit Number: P0117668

Facility ID: 0247040798

Effective Date: 12/24/2014

e. This emissions unit is not located within an "Appendix A" area as identified in OAC rule 3745-17-08. Therefore, pursuant to OAC rule 3745-17-08(A), this emissions unit is exempt from the requirements of OAC rule 3745-17-07(B).

f. Pursuant to b)(2)a above, pending SIP approval, the opacity limitation based on this rule is less stringent than the opacity limitation based on OAC rule 3745-31-05(A)(3).

After the SIP is approved by the U.S. EPA, visible particulate emissions from the stack serving this emissions unit shall not exceed 20% opacity as a 6-minute average, except as provided by the rule.

g. Monitoring and record keeping is not required for this emission limitation because it is based on controlled potential emissions.

c) Operational Restrictions

(1) The permittee shall not operate this emissions unit without use of the baghouse for dust collection.

(2) The hours of operation of this emissions unit shall not exceed 7488 hours on a rolling, 12-month basis.

d) Monitoring and/or Recordkeeping Requirements

(1) The permittee shall perform daily checks, when the emissions unit is in operation and when the weather conditions allow, for any visible emissions from the exhaust stack serving this emissions unit and for any visible emissions of fugitive dust from any non-stack egress points (i.e., building windows, doors, roof monitors, etc.) serving this emissions unit. The presence or absence of any visible emissions shall be noted in an operations log. If visible emissions are observed, the permittee shall also note the following in the operations log:

a. the location and color of the emissions;

b. whether the emissions are representative of normal operations;

c. if the emissions are not representative of normal operations, the cause of the abnormal emissions;

d. the total duration of any visible emission incident; and

e. any corrective actions taken to minimize or eliminate the visible emissions.

If visible emissions are present, a visible emission incident has occurred. The observer does not have to document the exact start and end times for the visible emission incident under item (d) above or continue the daily check until the incident has ended. The observer may indicate that the visible emission incident was continuous during the observation period (or, if known, continuous during the operation of the emissions unit). With respect to the documentation of corrective actions, the observer may indicate that no corrective actions were taken if the visible emissions were representative of normal

operations, or specify the minor corrective actions that were taken to ensure that the emission unit continued to operate under normal conditions, or specify the corrective actions that were taken to eliminate abnormal visible emissions.

A visible emission incident does not necessarily constitute a violation of the visible PE emission limitation in Section b(1)a established pursuant to OAC rule 3745-31-05(A)(3). A visible emission incident which exceeds the visible PE emission limitation in Section b(1)a observed in accordance with Method 9 of 40 CFR Part 60, Appendix A, shall constitute a violation of the visible PE emission limitation established pursuant to OAC rule 3745-31-05(A)(3).

- (2) The permittee may, upon receipt of written approval from the appropriate Ohio EPA District Office or local air agency, modify the above-mentioned frequencies for performing the visible emission checks if operating experience indicates that less frequent visible emissions checks would be sufficient to ensure compliance with the above-mentioned applicable requirements.
- (3) The acceptable range for the pressure drop across the baghouse shall be based upon the manufacturer's specifications, until such time as any required performance testing is conducted and/or an alternative pressure drop range and/or limit is established. The established pressure drop range shall include the manufacturer's specified pressure drop range.
- (4) The permittee shall properly install, operate, and maintain equipment to continuously monitor the pressure drop, in inches of water, across the baghouse when the controlled emissions unit is in operation, including periods of startup and shutdown. The permittee shall record the pressure drop across the baghouse on a daily basis. The monitoring equipment shall be installed, calibrated, operated, and maintained in accordance with the manufacturer's recommendations, instructions, and operating manual(s), with any modifications deemed necessary by the permittee.

Whenever the monitored value for the pressure drop deviates from the limit or range established in accordance with this permit, the permittee shall promptly investigate the cause of the deviation. The permittee shall maintain records of the following information for each investigation:

- a. the date and time the deviation began;
- b. the magnitude of the deviation at that time (i.e.; the actual value versus the established acceptable range);
- c. the date the investigation was conducted;
- d. the name(s) of the personnel who conducted the investigation; and
- e. the findings and recommendations.

In response to each required investigation to determine the cause of a deviation, the permittee shall take prompt corrective action to bring the operation of the control equipment within the acceptable range specified in this permit, unless the permittee

determines that corrective action is not necessary and documents the reasons for that determination and the date and time the deviation ended. The permittee shall maintain records of the following information for each corrective action taken.

- f. a description of the corrective action;
- g. the date corrective action was completed;
- h. the date and time the deviation ended;
- i. the total period of time (in minutes) during which there was a deviation;
- j. the pressure drop readings immediately after the corrective action was implemented; and
- k. the name(s) of the personnel who performed the work.

Investigation and records required by this paragraph do not eliminate the need to comply with the requirements of OAC rule 3745-15-06 if it is determined that a malfunction has occurred.

This range of limit of the pressure drop across the baghouse is effective for the duration of this permit, unless revisions are requested by the permittee and approved in writing by the Ohio EPA Northeast District Office. The permittee may request revisions to the permitted limit or range for the pressure drop based upon information obtained during future testing that demonstrate compliance with the allowable particulate emission rate for the controlled emissions unit. In addition, approved revisions to the range or limit will not constitute a relaxation of the monitoring requirements of this permit and may be incorporated into this permit by means of an administrative modification.

- (5) The permittee shall maintain an operations log for this emissions unit. This operations log shall contain, at a minimum, the following information:
 - a. the total number of hours of operation for each month; and
 - b. the amount of material processed, in tons per month.

e) Reporting Requirements

- (1) The permittee shall submit an annual Permit Evaluation Report (PER) to the Ohio EPA. The PER must be submitted by the due date identified in the Authorization section of this permit. The PER shall cover a reporting period of no more than 12 months for each air contaminant source identified in this permit.
- (2) The permittee shall identify in the annual PER the following information concerning the operations of the baghouse during the 12-month reporting period for this emissions unit:
 - a. each period of time (start time and date, and end time and date) when the pressure drop across the baghouse was outside of the acceptable range;

Final Permit-to-Install and Operate

Aleris Specialty Products, Inc.

Permit Number: P0117668

Facility ID: 0247040798

Effective Date: 12/24/2014

- b. any period of time (start time and date, and end time and date) when the emissions unit was in operation and the process emissions were not vented to the baghouse;
 - c. each incident of deviation described in "a" (above) where a prompt investigation was not conducted;
 - d. each incident of deviation described in "a" where prompt corrective action, that would bring the pressure drop into compliance with the acceptable range, was determined to be necessary and was not taken; and
 - e. each incident of deviation described in "a" where proper records were not maintained for the investigation and/or the corrective action(s), as identified in the monitoring and record keeping requirements of this permit.
- (3) The permittee shall identify in the annual PER (a) all days during which any visible particulate emissions were observed from the exhaust stack serving this emissions unit and (b) describe any corrective actions taken to minimize or eliminate the visible particulate emissions during the 12-month reporting period for this emissions unit.
 - (4) The permittee shall identify in the annual PER (a) all days during which any visible emissions of fugitive dust were observed from the egress points (i.e., building windows, doors, roof monitors, etc.) serving this emissions unit and (b) describe any corrective actions taken to minimize or eliminate the visible emissions during the 12-month reporting period for this emissions unit.
 - (5) All applications, notifications or reports required by the terms and conditions in this permit to be submitted or "reported in writing" are to be submitted to Ohio EPA through Ohio EPA's eBusiness Center: Air Services web service ("Air Services"). Ohio EPA will accept hard copy submittals on an as-needed basis if the permittee cannot submit the required documents through the Ohio EPA eBusiness Center. In the event of an alternative hard copy submission in lieu of the eBusiness Center, the post-marked date or the date the document is delivered in person will be recognized as the date submitted. Electronic submission of applications, notifications, or reports required to be submitted to Ohio EPA fulfills the requirement to submit the required information to the Director, the District Office or Local Air Agency, and/or any other individual or organization specifically identified as an additional recipient identified in this permit unless otherwise specified. Consistent with OAC rule 3745-15-03, the required application, notification, or report is considered to be "submitted" on the date the submission is successful using a valid electronic signature. Signature by the signatory authority may be represented as provided through procedures established by Air Services.
- f) Testing Requirements
- (1) Compliance with the Emissions Limitations and/or Control Requirements specified in section b) of these terms and conditions shall be determined in accordance with the following methods:

a. Emission Limitation:

Visible PE from any opening of the building housing this air contaminant source shall not exceed 10% opacity as a 3-minute average.

Applicable Compliance Method:

If required, compliance with the above emission limitation shall be demonstrated in accordance with the methods and procedures specified in 40 CFR Part 60, Appendix A, Method 9 and OAC rule 3745-17-03(B)(3).

b. Emission Limitations:

PE from the stack associated with this emissions unit shall not exceed 1.3 pounds per hour, 811.2 pounds per month, and 4.9 tons per year.

Applicable Compliance Methods:

i. If required, compliance with the particulate emission rate of 1.3 pounds per hour shall be demonstrated in accordance with the methods and procedures specified in 40 CFR Part 60, Appendix A, Methods 1 through 5.

ii. The permittee may determine the monthly particulate emission rate from the stack associated with this emissions unit by the following calculation:

$$E = T \times (0.128 \text{ lb/ton})$$

where:

E = monthly particulate emission rate in tons per month;

T = tons of material processed monthly in this emissions unit; and

0.128 lb/ton = controlled particulate emission factor based upon actual emission testing conducted on 08/25/10 on a similar source (the former MEV screener).

iii. The permittee may determine the annual particulate emission rate from the stack associated with this emissions unit by summing the monthly emissions in f)(1)b.ii on an annual basis.

c. Emission Limitation:

PE (fugitive and stack) shall not exceed 7.3 tons per year as a rolling, 12-month summation.

Applicable Compliance Method:

Compliance with the annual particulate emission rate for fugitive and stack emissions shall be assumed provided that emissions are vented to the baghouse

and compliance with the operating hours restriction in c)(2) is maintained because the limit is based on controlled potential emissions.

d. Emission Limitation:

Visible PE from the stack associated with this emissions unit shall not exceed 10% opacity as a 6-minute average.

Applicable Compliance Method:

If required, compliance with the above emission limitation shall be demonstrated in accordance with the methods and procedures specified in 40 CFR Part 60, Appendix A, Method 9 and OAC rule 3745-17-03(B)(1).

e. Emission Limitation:

Fugitive PE shall not exceed 2.4 tons per year.

Applicable Compliance Method:

The permittee may determine the annual fugitive particulate emission rate from this emissions unit by the following calculation:

$$E = T \times (0.063 \text{ lb/ton}) \times (1 \text{ ton}/2000 \text{ lbs})$$

where:

E = annual particulate emission rate in tons per year;

T = tons of material processed annually in this emissions unit; and

0.063 lb/ton = fugitive particulate emission factor based upon actual emission testing conducted on 08/25/10 on a similar source (the former MEV screener).

f. Emission Limitation:

Once U.S. EPA approves the December 1, 2006 version of OAC rule 3745-31-05, the following emission limitation shall apply:

Visible particulate emissions from the stack associated with this emissions unit shall not exceed 20% opacity as a 6-minute average, except as provided by the rule.

Applicable Compliance Method:

If required, compliance with the above emission limitation shall be demonstrated in accordance with the methods and procedures specified in 40 CFR Part 60, Appendix A, Method 9 and OAC rule 3745-17-03(B)(1).

g) Miscellaneous Requirements

- (1) None.

6. P908, P908

Operations, Property and/or Equipment Description:

DH400 Briquetter

a) This permit document constitutes a permit-to-install issued in accordance with ORC 3704.03(F) and a permit-to-operate issued in accordance with ORC 3704.03(G).

(1) For the purpose of a permit-to-install document, the emissions unit terms and conditions identified below are federally enforceable with the exception of those listed below which are enforceable under state law only.

a. c)(2) and d)(5)

(2) For the purpose of a permit-to-operate document, the emissions unit terms and conditions identified below are enforceable under state law only with the exception of those listed below which are federally enforceable.

a. None.

b) Applicable Emissions Limitations and/or Control Requirements

(1) The specific operation(s), property, and/or equipment that constitute each emissions unit along with the applicable rules and/or requirements and with the applicable emissions limitations and/or control measures are identified below. Emissions from each unit shall not exceed the listed limitations, and the listed control measures shall be specified in narrative form following the table.

| | Applicable Rules/Requirements | Applicable Emissions Limitations/Control Measures |
|----|---|---|
| a. | OAC rule 3745-31-05(A)(3) as effective 11/30/01 | Particulate emissions (PE) from the stack associated with this emissions unit shall not exceed 0.06 pound per hour, 37.5 pounds per month, and 0.23 ton per year. Fugitive PE shall not exceed 0.11 ton per year. Visible PE from any opening of the building housing this air contaminant source shall not exceed 10% opacity as a 3-minute average. Visible PE from the stack associated with this emissions unit shall not exceed 10% opacity as a 6-minute average. See b)(2)a. |

| | Applicable Rules/Requirements | Applicable Emissions Limitations/Control Measures |
|----|---|---|
| b. | OAC rule 3745-31-05(A)(3) as effective 12/01/06 | See b)(2)b. |
| c. | OAC rule 3745-31-05(D)(1)(b) | PE (fugitive and stack) shall not exceed 0.34 ton per year as a rolling, 12-month summation. See b)(2)g. |
| d. | OAC rule 3745-17-07(A)(1) | See b)(2)f. |
| e. | OAC rule 3745-17-07(B) | See b)(2)d. |
| f. | OAC rule 3745-17-08(B) | See b)(2)e. |
| g. | OAC rule 3745-17-11(B)(1) | The PE limitation specified by this rule is less stringent than the PE limitation established pursuant to OAC rules 3745-31-05(A)(3) and 3745-31-05(D)(1)(b). |

(2) Additional Terms and Conditions

- a. The permittee has satisfied the Best Available Technology (BAT) requirements pursuant to OAC paragraph 3745-31-05(A)(3), as effective November 30, 2001, in this permit. On December 1, 2006, paragraph (A)(3) of OAC rule 3745-31-05 was revised to conform to ORC changes effective August 3, 2006 (S.B. 265 changes), such that BAT is no longer required by State regulations for NAAQS pollutants less than ten tons per year. However, that rule revision has not yet been approved by U.S. EPA as a revision to Ohio's State Implementation Plan (SIP). Therefore, until the SIP revision occurs and the U.S. EPA approves the revisions to OAC rule 3745-31-05, the requirement to satisfy BAT still exists as part of the federally-approved SIP for Ohio. Once U.S. EPA approves the December 1, 2006, version of 3745-31-05, then these emission limits/control measures no longer apply.
- b. This rule paragraph applies once U.S. EPA approves the December 1, 2006, version of OAC rule 3745-31-05 as part of the State Implementation Plan.

The Best Available Technology (BAT) requirements under OAC rule 3745-31-05(A)(3) do not apply to the particulate emissions (PE) from this air contaminant source since the controlled potential to emit for PE is less than 10 tons per year.
- c. Best available control measures (BACM) shall be employed to minimize fugitive particulate emissions. BACM shall include, but not be limited to, using a baghouse for dust collection, containing operations within the building and using good engineering practices.
- d. This emissions unit is exempt from the visible PE limitations specified in OAC rule 3745-17-07(B) pursuant to OAC rule 3745-17-07(B)(11)(e).

Final Permit-to-Install and Operate

Aleris Specialty Products, Inc.

Permit Number: P0117668

Facility ID: 0247040798

Effective Date: 12/24/2014

e. This emissions unit is not located within an "Appendix A" area as identified in OAC rule 3745-17-08. Therefore, pursuant to OAC rule 3745-17-08(A), this emissions unit is exempt from the requirements of OAC rule 3745-17-07(B).

f. Pursuant to b)(2)a above, pending SIP approval, the opacity limitation based on this rule is less stringent than the opacity limitation based on OAC rule 3745-31-05(A)(3).

After the SIP is approved by the U.S. EPA, visible particulate emissions from the stack serving this emissions unit shall not exceed 20% opacity as a 6-minute average, except as provided by the rule.

g. Monitoring and record keeping is not required for this emission limitation because it is based on controlled potential emissions.

c) Operational Restrictions

(1) The permittee shall not operate this emissions unit without use of the baghouse for dust collection.

(2) The hours of operation of this emissions unit shall not exceed 7488 hours on a rolling, 12-month basis.

d) Monitoring and/or Recordkeeping Requirements

(1) The permittee shall perform daily checks, when the emissions unit is in operation and when the weather conditions allow, for any visible emissions from the exhaust stack serving this emissions unit and for any visible emissions of fugitive dust from any non-stack egress points (i.e., building windows, doors, roof monitors, etc.) serving this emissions unit. The presence or absence of any visible emissions shall be noted in an operations log. If visible emissions are observed, the permittee shall also note the following in the operations log:

a. the location and color of the emissions;

b. whether the emissions are representative of normal operations;

c. if the emissions are not representative of normal operations, the cause of the abnormal emissions;

d. the total duration of any visible emission incident; and

e. any corrective actions taken to minimize or eliminate the visible emissions.

If visible emissions are present, a visible emission incident has occurred. The observer does not have to document the exact start and end times for the visible emission incident under item (d) above or continue the daily check until the incident has ended. The observer may indicate that the visible emission incident was continuous during the observation period (or, if known, continuous during the operation of the emissions unit). With respect to the documentation of corrective actions, the observer may indicate that no corrective actions were taken if the visible emissions were representative of normal

operations, or specify the minor corrective actions that were taken to ensure that the emission unit continued to operate under normal conditions, or specify the corrective actions that were taken to eliminate abnormal visible emissions.

A visible emission incident does not necessarily constitute a violation of the visible PE emission limitation in Section b(1)a established pursuant to OAC rule 3745-31-05(A)(3). A visible emission incident which exceeds the visible PE emission limitation in Section b(1)a observed in accordance with Method 9 of 40 CFR Part 60, Appendix A, shall constitute a violation of the visible PE emission limitation established pursuant to OAC rule 3745-31-05(A)(3).

- (2) The permittee may, upon receipt of written approval from the appropriate Ohio EPA District Office or local air agency, modify the above-mentioned frequencies for performing the visible emission checks if operating experience indicates that less frequent visible emissions checks would be sufficient to ensure compliance with the above-mentioned applicable requirements.
- (3) The acceptable range for the pressure drop across the baghouse shall be based upon the manufacturer's specifications, until such time as any required performance testing is conducted and/or an alternative pressure drop range and/or limit is established. The established pressure drop range shall include the manufacturer's specified pressure drop range.
- (4) The permittee shall properly install, operate, and maintain equipment to continuously monitor the pressure drop, in inches of water, across the baghouse when the controlled emissions unit is in operation, including periods of startup and shutdown. The permittee shall record the pressure drop across the baghouse on a daily basis. The monitoring equipment shall be installed, calibrated, operated, and maintained in accordance with the manufacturer's recommendations, instructions, and operating manual(s), with any modifications deemed necessary by the permittee.

Whenever the monitored value for the pressure drop deviates from the limit or range established in accordance with this permit, the permittee shall promptly investigate the cause of the deviation. The permittee shall maintain records of the following information for each investigation:

- a. the date and time the deviation began;
- b. the magnitude of the deviation at that time (i.e.; the actual value versus the established acceptable range);
- c. the date the investigation was conducted;
- d. the name(s) of the personnel who conducted the investigation; and
- e. the findings and recommendations.

In response to each required investigation to determine the cause of a deviation, the permittee shall take prompt corrective action to bring the operation of the control equipment within the acceptable range specified in this permit, unless the permittee

determines that corrective action is not necessary and documents the reasons for that determination and the date and time the deviation ended. The permittee shall maintain records of the following information for each corrective action taken.

- f. a description of the corrective action;
- g. the date corrective action was completed;
- h. the date and time the deviation ended;
- i. the total period of time (in minutes) during which there was a deviation;
- j. the pressure drop readings immediately after the corrective action was implemented; and
- k. the name(s) of the personnel who performed the work.

Investigation and records required by this paragraph do not eliminate the need to comply with the requirements of OAC rule 3745-15-06 if it is determined that a malfunction has occurred.

This range of limit of the pressure drop across the baghouse is effective for the duration of this permit, unless revisions are requested by the permittee and approved in writing by the Ohio EPA Northeast District Office. The permittee may request revisions to the permitted limit or range for the pressure drop based upon information obtained during future testing that demonstrate compliance with the allowable particulate emission rate for the controlled emissions unit. In addition, approved revisions to the range or limit will not constitute a relaxation of the monitoring requirements of this permit and may be incorporated into this permit by means of an administrative modification.

- (5) The permittee shall maintain an operations log for this emissions unit. This operations log shall contain, at a minimum, the following information:
 - a. the total number of hours of operation for each month; and
 - b. the amount of material processed, in tons per month.

e) Reporting Requirements

- (1) The permittee shall submit an annual Permit Evaluation Report (PER) to the Ohio EPA. The PER must be submitted by the due date identified in the Authorization section of this permit. The PER shall cover a reporting period of no more than 12 months for each air contaminant source identified in this permit.
- (2) The permittee shall identify in the annual PER the following information concerning the operations of the baghouse during the 12-month reporting period for this emissions unit:
 - a. each period of time (start time and date, and end time and date) when the pressure drop across the baghouse was outside of the acceptable range;

Final Permit-to-Install and Operate

Aleris Specialty Products, Inc.

Permit Number: P0117668

Facility ID: 0247040798

Effective Date: 12/24/2014

- b. any period of time (start time and date, and end time and date) when the emissions unit was in operation and the process emissions were not vented to the baghouse;
 - c. each incident of deviation described in "a" (above) where a prompt investigation was not conducted;
 - d. each incident of deviation described in "a" where prompt corrective action, that would bring the pressure drop into compliance with the acceptable range, was determined to be necessary and was not taken; and
 - e. each incident of deviation described in "a" where proper records were not maintained for the investigation and/or the corrective action(s), as identified in the monitoring and record keeping requirements of this permit.
- (3) The permittee shall identify in the annual PER (a) all days during which any visible particulate emissions were observed from the exhaust stack serving this emissions unit and (b) describe any corrective actions taken to minimize or eliminate the visible particulate emissions during the 12-month reporting period for this emissions unit.
 - (4) The permittee shall identify in the annual PER (a) all days during which any visible emissions of fugitive dust were observed from the egress points (i.e., building windows, doors, roof monitors, etc.) serving this emissions unit and (b) describe any corrective actions taken to minimize or eliminate the visible emissions during the 12-month reporting period for this emissions unit.
 - (5) All applications, notifications or reports required by the terms and conditions in this permit to be submitted or "reported in writing" are to be submitted to Ohio EPA through Ohio EPA's eBusiness Center: Air Services web service ("Air Services"). Ohio EPA will accept hard copy submittals on an as-needed basis if the permittee cannot submit the required documents through the Ohio EPA eBusiness Center. In the event of an alternative hard copy submission in lieu of the eBusiness Center, the post-marked date or the date the document is delivered in person will be recognized as the date submitted. Electronic submission of applications, notifications, or reports required to be submitted to Ohio EPA fulfills the requirement to submit the required information to the Director, the District Office or Local Air Agency, and/or any other individual or organization specifically identified as an additional recipient identified in this permit unless otherwise specified. Consistent with OAC rule 3745-15-03, the required application, notification, or report is considered to be "submitted" on the date the submission is successful using a valid electronic signature. Signature by the signatory authority may be represented as provided through procedures established by Air Services.
- f) **Testing Requirements**
 - (1) Compliance with the Emissions Limitations and/or Control Requirements specified in section b) of these terms and conditions shall be determined in accordance with the following methods:

a. Emission Limitation:

Visible PE from any opening of the building housing this air contaminant source shall not exceed 10% opacity as a 3-minute average.

Applicable Compliance Method:

If required, compliance with the above emission limitation shall be demonstrated in accordance with the methods and procedures specified in 40 CFR Part 60, Appendix A, Method 9 and OAC rule 3745-17-03(B)(3).

b. Emission Limitations:

PE from the stack associated with this emissions unit shall not exceed 0.06 pound per hour, 37.5 pounds per month, and 0.23 ton per year.

Applicable Compliance Methods:

i. If required, compliance with the particulate emission rate of 0.06 pound per hour shall be demonstrated in accordance with the methods and procedures specified in 40 CFR Part 60, Appendix A, Methods 1 through 5.

ii. The permittee may determine the monthly particulate emission rate from the stack associated with this emissions unit by the following calculation:

$$E = T \times (0.006 \text{ lb/ton})$$

where:

E = hourly particulate emission rate in tons per month;

T = tons of material processed monthly in this emissions unit; and

0.006 lb/ton = controlled particulate emission factor based upon AP42 Table 11.19.2-2.

iii. The permittee may determine the annual particulate emission rate from the stack associated with this emissions unit by summing the monthly emissions in f)(1)b.ii on an annual basis.

c. Emission Limitation:

PE (fugitive and stack) shall not exceed 0.34 ton per year as a rolling, 12-month summation.

Applicable Compliance Method:

Compliance with the annual particulate emission rate for fugitive and stack emissions shall be assumed provided that emissions are vented to the baghouse

and compliance with the operating hours restriction in c)(2) is maintained because the limit is based on controlled potential emissions.

d. Emission Limitation:

Visible PE from the stack associated with this emissions unit shall not exceed 10% opacity as a 6-minute average.

Applicable Compliance Method:

If required, compliance with the above emission limitation shall be demonstrated in accordance with the methods and procedures specified in 40 CFR Part 60, Appendix A, Method 9 and OAC rule 3745-17-03(B)(1).

e. Emission Limitation:

Fugitive PE shall not exceed 0.11 ton per year.

Applicable Compliance Method:

The permittee may determine the annual fugitive particulate emission rate from this emissions unit by the following calculation:

$$E = T \times (0.003 \text{ lb/ton}) \times (1 \text{ ton}/2000 \text{ lbs})$$

where:

E = annual particulate emission rate in tons per year;

T = tons of material processed annually in this emissions unit; and

0.003 lb/ton = fugitive particulate emission factor based upon AP42 Table 11.19.2-2.

f. Emission Limitation:

Once U.S. EPA approves the December 1, 2006 version of OAC rule 3745-31-05, the following emission limitation shall apply:

Visible particulate emissions from the stack associated with this emissions unit shall not exceed 20% opacity as a 6-minute average, except as provided by the rule.

Applicable Compliance Method:

If required, compliance with the above emission limitation shall be demonstrated in accordance with the methods and procedures specified in 40 CFR Part 60, Appendix A, Method 9 and OAC rule 3745-17-03(B)(1).

g) Miscellaneous Requirements

- (1) None.

7. P909, P909

Operations, Property and/or Equipment Description:

SSI Pre Shredder

- a) This permit document constitutes a permit-to-install issued in accordance with ORC 3704.03(F) and a permit-to-operate issued in accordance with ORC 3704.03(G).
 - (1) For the purpose of a permit-to-install document, the emissions unit terms and conditions identified below are federally enforceable with the exception of those listed below which are enforceable under state law only.
 - a. c)(2) and d)(5)
 - (2) For the purpose of a permit-to-operate document, the emissions unit terms and conditions identified below are enforceable under state law only with the exception of those listed below which are federally enforceable.
 - a. None.
- b) Applicable Emissions Limitations and/or Control Requirements
 - (1) The specific operation(s), property, and/or equipment that constitute each emissions unit along with the applicable rules and/or requirements and with the applicable emissions limitations and/or control measures are identified below. Emissions from each unit shall not exceed the listed limitations, and the listed control measures shall be specified in narrative form following the table.

| | Applicable Rules/Requirements | Applicable Emissions Limitations/Control Measures |
|----|--|---|
| a. | OAC rule 3745-31-05(A)(3), as effective 11/30/01 | Particulate emissions (PE) from the stack associated with this emissions unit shall not exceed 0.77 pound per hour, 480.5 pounds per month, and 2.86 tons per year. Fugitive PE shall not exceed 1.46 tons per year. Visible PE from any opening of the building housing this air contaminant source shall not exceed 10% opacity, as a 3-minute average. Visible PE from the stack associated with this emissions unit shall not exceed 10% opacity, as a 6-minute average. See b)(2)a. below. |

| | Applicable Rules/Requirements | Applicable Emissions Limitations/Control Measures |
|----|--|---|
| b. | OAC rule 3745-31-05(A)(3), as effective 12/01/06 | See b)(2)b. below. |
| c. | OAC rule 3745-31-05(D)(1)(b) | PE (fugitive and stack) shall not exceed 4.3 tons per year as a rolling, 12-month summation. See c)(2). |
| d. | OAC rule 3745-17-07(A)(1) | See b)(2)f. |
| e. | OAC rule 3745-17-07(B) | See b)(2)d. |
| f. | OAC rule 3745-17-08(B) | See b)(2)e. |
| g. | OAC rule 3745-17-11(B)(1) | The PE limitation specified by this rule is less stringent than the PE limitation established pursuant to OAC rule 3745-31-05(A)(3). See b)(2)g. |

(2) Additional Terms and Conditions

a. The permittee has satisfied the Best Available Technology (BAT) requirements pursuant to OAC paragraph 3745-31-05(A)(3), as effective November 30, 2001, in this permit. On December 1, 2006, paragraph (A)(3) of OAC rule 3745-31-05 was revised to conform to ORC changes effective August 3, 2006 (S.B. 265 changes), such that BAT is no longer required by State regulations for NAAQS pollutants less than ten tons per year. However, that rule revision has not yet been approved by U.S. EPA as a revision to Ohio's State Implementation Plan (SIP). Therefore, until the SIP revision occurs and the U.S. EPA approves the revisions to OAC rule 3745-31-05, the requirement to satisfy BAT still exists as part of the federally-approved SIP for Ohio. Once U.S. EPA approves the December 1, 2006, version of 3745-31-05, then these emission limits/control measures no longer apply.

b. This rule paragraph applies once U.S. EPA approves the December 1, 2006, version of OAC rule 3745-31-05 as part of the State Implementation Plan.

FEPTIO P0114090 for this air contaminant source takes into account the following voluntary restrictions (including the use of any applicable air pollution control equipment) as proposed by the permittee for the purpose of avoiding BAT requirements under OAC rule 3745-31-05(A)(3):

i. The emissions from the SSI Pre-Shredder shall be vented with a capture efficiency of 99% to a baghouse with a control efficiency of 98% at all times the emissions unit is in operation.

ii. Stack and fugitive particulate emissions combined shall not exceed 4.3 tons per year as a rolling, 12-month summation.

Final Permit-to-Install and Operate

Aleris Specialty Products, Inc.

Permit Number: P0117668

Facility ID: 0247040798

Effective Date: 12/24/2014

- c. Best available control measures (BACM) shall be employed to minimize fugitive particulate emissions. BACM shall include, but not be limited to, using a baghouse for dust collection, containing operations within the building, and using good engineering practices.
- d. This emissions unit is exempt from the visible PE limitations specified in OAC rule 3745-17-07(B), pursuant to OAC rule 3745-17-07(B)(11)(e).
- e. This emissions unit is not located within an "Appendix A" area as identified in OAC rule 3745-17-08. Therefore, pursuant to OAC rule 3745-17-08(A), this emissions unit is exempt from the requirements of OAC rule 3745-17-07(B).
- f. Pursuant to section b)(2)a above, pending SIP approval, the opacity limitation based on this rule is less stringent than the opacity limitation based on OAC rule 3745-31-05(A)(3).

After the SIP is approved by the U.S. EPA, visible PE from the stack serving this emissions unit shall not exceed twenty percent opacity, as a six-minute average, except as provided by rule.

- g. Pursuant to section b)(2)a above, pending SIP approval, the particulate emission limitation based on this rule is less stringent than the particulate emission limitation based on OAC rule 3745-31-05(A)(3).

After the SIP is approved by the U.S. EPA, PE from the stack associated with this emissions unit shall not exceed 25.2 pounds per hour based upon Table I of OAC rule 3745-17-11 and a maximum process weight rate of 15 tons per hour in accordance with the permittee's application.

c) Operational Restrictions

- (1) The permittee shall not operate this emissions unit without use of the baghouse for dust collection.
- (2) The hours of operation of this emissions unit shall be limited to 7488 hours on a rolling, 12-month basis.

d) Monitoring and/or Recordkeeping Requirements

- (1) The permittee shall perform daily checks, when the emissions unit is in operation and when the weather conditions allow, for any visible emissions from the exhaust stack serving this emissions unit and for any visible emissions of fugitive dust from any non-stack egress points (i.e., building windows, doors, roof monitors, etc.) serving this emissions unit. The presence or absence of any visible emissions shall be noted in an operations log. If visible emissions are observed, the permittee shall also note the following in the operations log:
 - a. The location and color of the emissions;
 - b. Whether the emissions are representative of normal operations;

- c. If the emissions are not representative of normal operations, the cause of the abnormal emissions;
- d. The total duration of any visible emission incident; and
- e. Any corrective actions taken to minimize or eliminate the visible emissions.

If visible emissions are present, a visible emission incident has occurred. The observer does not have to document the exact start and end times for the visible emission incident under item (d) above or continue the daily check until the incident has ended. The observer may indicate that the visible emission incident was continuous during the observation period (or, if known, continuous during the operation of the emissions unit). With respect to the documentation of corrective actions, the observer may indicate that no corrective actions were taken if the visible emissions were representative of normal operations, or specify the minor corrective actions that were taken to ensure that the emission unit continued to operate under normal conditions, or specify the corrective actions that were taken to eliminate abnormal visible emissions.

A visible emission incident does not necessarily constitute a violation of the visible PE emission limitation in Section b(1)a established pursuant to OAC rule 3745-31-05(A)(3). A visible emission incident which exceeds the visible PE emission limitation in Section b(1)a observed in accordance with Method 9 of 40 CFR Part 60, Appendix A, shall constitute a violation of the visible PE emission limitation established pursuant to OAC rule 3745-31-05(A)(3).

- (2) The permittee may, upon receipt of written approval from the appropriate Ohio EPA District Office or local air agency, modify the above-mentioned frequencies for performing the visible emission checks if operating experience indicates that less frequent visible emissions checks would be sufficient to ensure compliance with the above-mentioned applicable requirements.
- (3) The acceptable range for the pressure drop across the baghouse shall be based upon the manufacturer's specifications, until such time as any required performance testing is conducted and/or an alternative pressure drop range and/or limit is established. The established pressure drop range shall include the manufacturer's specified pressure drop range.
- (4) The permittee shall properly install, operate, and maintain equipment to continuously monitor the pressure drop, in inches of water, across the baghouse when the controlled emissions unit is in operation, including periods of startup and shutdown. The permittee shall record the pressure drop across the baghouse on a daily basis. The monitoring equipment shall be installed, calibrated, operated, and maintained in accordance with the manufacturer's recommendations, instructions, and operating manual(s), with any modifications deemed necessary by the permittee.

Whenever the monitored value for the pressure drop deviates from the limit or range established in accordance with this permit, the permittee shall promptly investigate the cause of the deviation. The permittee shall maintain records of the following information for each investigation:

- a. The date and time the deviation began;
- b. The magnitude of the deviation at that time (i.e.; the actual value versus the established acceptable range);
- c. The date the investigation was conducted;
- d. The name(s) of the personnel who conducted the investigation; and
- e. The findings and recommendations.

In response to each required investigation to determine the cause of a deviation, the permittee shall take prompt corrective action to bring the operation of the control equipment within the acceptable range specified in this permit, unless the permittee determines that corrective action is not necessary and documents the reasons for that determination and the date and time the deviation ended. The permittee shall maintain records of the following information for each corrective action taken.

- f. A description of the corrective action;
- g. The date corrective action was completed;
- h. The date and time the deviation ended;
- i. The total period of time (in minutes) during which there was a deviation;
- j. The pressure drop readings immediately after the corrective action was implemented; and
- k. The name(s) of the personnel who performed the work.

Investigation and records required by this paragraph do not eliminate the need to comply with the requirements of OAC rule 3745-15-06 if it is determined that a malfunction has occurred.

This range of limit of the pressure drop across the baghouse is effective for the duration of this permit, unless revisions are requested by the permittee and approved in writing by the Ohio EPA Northeast District Office. The permittee may request revisions to the permitted limit or range for the pressure drop based upon information obtained during future testing that demonstrate compliance with the allowable particulate emission rate for the controlled emissions unit. In addition, approved revisions to the range or limit will not constitute a relaxation of the monitoring requirements of this permit and may be incorporated into this permit by means of an administrative modification.

- (5) The permittee shall maintain an operations log for this emissions unit. This operations log shall contain, at a minimum, the following information:
 - a. The total number of hours of operation for each month; and
 - b. The amount of material processed, in tons per month.

e) Reporting Requirements

- (1) The permittee shall submit an annual Permit Evaluation Report (PER) to the Ohio EPA. The PER must be submitted by the due date identified in the Authorization section of this permit. The PER shall cover a reporting period of no more than 12 months for each air contaminant source identified in this permit.
- (2) The permittee shall identify in the annual PER the following information concerning the operations of the baghouse during the 12-month reporting period for this emissions unit:
 - a. Each period of time (start time and date, and end time and date) when the pressure drop across the baghouse was outside of the acceptable range;
 - b. Any period of time (start time and date, and end time and date) when the emissions unit was in operation and the process emissions were not vented to the baghouse;
 - c. Each incident of deviation described in "a" (above) where a prompt investigation was not conducted;
 - d. Each incident of deviation described in "a" where prompt corrective action, that would bring the pressure drop into compliance with the acceptable range, was determined to be necessary and was not taken; and
 - e. Each incident of deviation described in "a" where proper records were not maintained for the investigation and/or the corrective action(s), as identified in the monitoring and record keeping requirements of this permit.
- (3) The permittee shall identify in the annual PER (a) all days during which any visible particulate emissions were observed from the exhaust stack serving this emissions unit and (b) describe any corrective actions taken to minimize or eliminate the visible particulate emissions during the 12-month reporting period for this emissions unit.
- (4) The permittee shall identify in the annual PER (a) all days during which any visible emissions of fugitive dust were observed from the egress points (i.e., building windows, doors, roof monitors, etc.) serving this emissions unit and (b) describe any corrective actions taken to minimize or eliminate the visible emissions during the 12-month reporting period for this emissions unit.
- (5) All applications, notifications or reports required by the terms and conditions in this permit to be submitted or "reported in writing" are to be submitted to Ohio EPA through Ohio EPA's eBusiness Center: Air Services web service ("Air Services"). Ohio EPA will accept hard copy submittals on an as-needed basis if the permittee cannot submit the required documents through the Ohio EPA eBusiness Center. In the event of an alternative hard copy submission in lieu of the eBusiness Center, the post-marked date or the date the document is delivered in person will be recognized as the date submitted. Electronic submission of applications, notifications, or reports required to be submitted to Ohio EPA fulfills the requirement to submit the required information to the Director, the District Office or Local Air Agency, and/or any other individual or organization specifically identified as an additional recipient identified in this permit unless otherwise specified.

Consistent with OAC rule 3745-15-03, the required application, notification, or report is considered to be "submitted" on the date the submission is successful using a valid electronic signature. Signature by the signatory authority may be represented as provided through procedures established by Air Services.

f) Testing Requirements

(1) Compliance with the Emissions Limitations and/or Control Requirements specified in section b) of these terms and conditions shall be determined in accordance with the following methods:

a. Emission Limitation:

Visible PE from any opening of the building housing this air contaminant source shall not exceed 10% opacity, as a three-minute average.

Applicable Compliance Method:

If required, compliance with the above emission limitation shall be determined in accordance with 40 CFR Part 60, Appendix A, Method 9, and the procedures specified in OAC rule 3745-17-03(B)(3).

b. Emission Limitation:

PE from the stack associated with this emissions unit shall not exceed 0.77 pound per hour, 480.5 pounds per month, and 2.86 tons per year.

Applicable Compliance Method:

iv. If required, compliance with the particulate emission rate of 0.77 pound per hour shall be determined in accordance with 40 CFR Part 60, Appendix A, Methods 1 through 5 and the procedures in OAC rule 3745-17-03.

v. The permittee may determine the monthly particulate emission rate from the stack associated with this emissions unit by the following calculation:

$$E = T \times (0.051 \text{ lb/ton})$$

Where

E = monthly particulate emission rate in tons per month;

T = tons of material processed monthly in this emissions unit; and

0.051 lb/ton = controlled particulate emission factor based upon actual emission testing conducted in 2010 on a similar source at A & B Foundry and Machining in Franklin, Ohio (SCC 3-04-001-08).

iii. The permittee may determine the annual particulate emission rate from the stack associated with this emissions unit by summing the monthly emissions in Section f)(1)b.ii on an annual basis.

c. Emission Limitation:

PE (fugitive and stack) shall not exceed 4.3 tons per year as a rolling, 12-month summation.

Applicable Compliance Method:

Compliance with the annual PE rate for fugitive and stack emissions shall be assumed provided that emissions are vented to the baghouse and compliance with the operating hours restriction in c)(2) is maintained because the limit is based on controlled potential emissions.

d. Emission Limitation:

Visible PE from the stack associated with this emissions unit shall not exceed 10% opacity as a six-minute average, except as provided by the rule.

Applicable Compliance Method:

If required, compliance with the above emission limitation shall be determined in accordance with 40 CFR Part 60, Appendix A, Method 9, and the procedures specified in OAC rule 3745-17-03(B)(1).

e. Emission Limitation:

Fugitive PE shall not exceed 1.46 tons per year.

Applicable Compliance Method:

The permittee may determine the annual fugitive particulate emission rate from this emissions unit by the following calculation:

$$E = T \times (0.026 \text{ lb/ton}) \times (1 \text{ ton}/2000 \text{ lbs})$$

Where

E = annual particulate emission rate in tons per year;

T = tons of material processed annually in this emissions unit; and

0.026 lb/ton = fugitive particulate emission factor based upon actual emission testing conducted in 2010 on a similar source at A & B Foundry and Machining in Franklin, Ohio (SCC 3-04-001-08).

f. Emission Limitation (upon U.S. EPA approval of the December 1, 2006, version of OAC rule 3745-31-05 as part of the State Implementation Plan):

Visible PE from the stack associated with this emissions unit shall not exceed 20% percent opacity, as a six-minute average, except as provided by rule.

Final Permit-to-Install and Operate

Aleris Specialty Products, Inc.

Permit Number: P0117668

Facility ID: 0247040798

Effective Date: 12/24/2014

Applicable Compliance Method:

If required, compliance with the above emission limitation shall be determined in accordance with 40 CFR Part 60, Appendix A, Method 9, and the procedures specified in OAC rule 3745-17-03(B)(1).

- g. Emission Limitation (upon U.S. EPA approval of the December 1, 2006, version of OAC rule 3745-31-05 as part of the State Implementation Plan):

PE from the stack associated with this emissions unit shall not exceed 25.2 pounds per hour.

Applicable Compliance Method:

If required, compliance with the particulate emission rate of 25.2 pounds per hour shall be determined in accordance with 40 CFR Part 60, Appendix A, Methods 1 through 5 and the procedures in OAC rule 3745-17-03.

- g) Miscellaneous Requirements

- (1) None.
