Mailing Address:

Lazarus Gov. Center  
P.O. Box 1049

**Application No: 14-05039**

**DATE: 2/13/2001**

Hunting Industrial Coatings  
David Sullivan  
10448 Chester Road  
Cincinnati, OH 45215

Enclosed please find an Ohio EPA Permit to Install which will allow you to install the described source(s) in a manner indicated in the permit. Because this permit contains several conditions and restrictions, I urge you to read it carefully.

The Ohio EPA is urging companies to investigate pollution prevention and energy conservation. Not only will this reduce pollution and energy consumption, but it can also save you money. If you would like to learn ways you can save money while protecting the environment, please contact our Office of Pollution Prevention at (614) 644-3469.

You are hereby notified that this action by the Director is final and may be appealed to the Ohio Environmental Review Appeals Commission pursuant to Chapter 3745.04 of the Ohio Revised Code. The appeal must be in writing and set forth the action complained of and the grounds upon which the appeal is based. It must be filed within thirty (30) days after the notice of the Directors action. A copy of the appeal must be served on the Director of the Ohio Environmental Protection Agency within three (3) days of filing with the Commission. An appeal may be filed with the Environmental Review Appeals Commission at the following address:

Environmental Review Appeals Commission  
236 East Town Street, Room 300  
Columbus, Ohio 43215

Very truly yours,

Thomas G. Rigo, Manager  
Field Operations and Permit Section  
Division of Air Pollution Control

CC: USEPA

HCDES

**Permit To Install**

STATE OF OHIO ENVIRONMENTAL PROTECTION AGENCY

**FINAL PERMIT TO INSTALL 14-05039**

Application Number: 14-05039  
APS Premise Number: 1431480257  
Permit Fee: **\$800**  
Name of Facility: Hunting Industrial Coatings  
Person to Contact: David Sullivan  
Address: 10448 Chester Road  
Cincinnati, OH 45215

Location of proposed air contaminant source(s) [emissions unit(s)]:  
**10448 Chester Road**  
**Cincinnati, Ohio**

Description of proposed emissions unit(s):  
**Three Schold High Speed Paint Mixers.**

The above named entity is hereby granted a Permit to Install for the above described emissions unit(s) pursuant to Chapter 3745-31 of the Ohio Administrative Code. Issuance of this permit does not constitute expressed or implied approval or agreement that, if constructed or modified in accordance with the plans included in the application, the above described emissions unit(s) of environmental pollutants will operate in compliance with applicable State and Federal laws and regulations, and does not constitute expressed or implied assurance that if constructed or modified in accordance with those plans and specifications, the above described emissions unit(s) of pollutants will be granted the necessary permits to operate (air) or NPDES permits as applicable.

This permit is granted subject to the conditions attached hereto.

Ohio Environmental Protection Agency

Director

## Part I - GENERAL TERMS AND CONDITIONS

### A. Permit to Install General Terms and Conditions

#### 1. Compliance Requirements

The emissions unit(s) identified in this Permit to Install shall remain in full compliance with all applicable State laws and regulations and the terms and conditions of this permit.

#### 2. Reporting Requirements Related to Monitoring and Recordkeeping Requirements

The permittee shall submit required reports in the following manner:

- a. Reports of any required monitoring and/or recordkeeping information shall be submitted to the appropriate Ohio EPA District Office or local air agency.
- b. Except as otherwise may be provided in the terms and conditions for a specific emissions unit, quarterly written reports of (a) any deviations (excursions) from emission limitations, operational restrictions, and control device operating parameter limitations that have been detected by the testing, monitoring, and recordkeeping requirements specified in this permit, (b) the probable cause of such deviations, and (c) any corrective actions or preventive measures which have been or will be taken, shall be submitted to the appropriate Ohio EPA District Office or local air agency. If no deviations occurred during a calendar quarter, the permittee shall submit a quarterly report, which states that no deviations occurred during that quarter. The reports shall be submitted quarterly, i.e., by January 31, April 30, July 31, and October 31 of each year and shall cover the previous calendar quarters. (These quarterly reports shall exclude deviations resulting from malfunctions reported in accordance with OAC rule 3745-15-06.)

#### 3. Records Retention Requirements

Each record of any monitoring data, testing data, and support information required pursuant to this permit shall be retained for a period of five years from the date the record was created. Support information shall include, but not be limited to, all calibration and maintenance records and all original strip-chart recordings for continuous monitoring instrumentation, and copies of all reports required by this permit. Such records may be maintained in computerized form.

#### 4. Inspections and Information Requests

The Director of the Ohio EPA, or an authorized representative of the Director, may, subject to the safety requirements of the permittee and without undue delay, enter upon the premises of this source at any reasonable time for purposes of making inspections, conducting tests, examining records or reports pertaining to any emission of air contaminants, and determining compliance with any applicable State air pollution laws and regulations and the terms and conditions of this permit. The permittee shall furnish to the Director of the Ohio EPA, or an authorized

representative of the Director, upon receipt of a written request and within a reasonable time, any information that may be requested to determine whether cause exists for modifying, reopening or revoking this permit or to determine compliance with this permit. Upon verbal or written request, the permittee shall also furnish to the Director of the Ohio EPA, or an authorized representative of the Director, copies of records required to be kept by this permit.

**5. Scheduled Maintenance/Malfunction Reporting**

Any scheduled maintenance of air pollution control equipment shall be performed in accordance with paragraph (A) of OAC rule 3745-15-06. The malfunction of any emissions units or any associated air pollution control system(s) shall be reported to the appropriate Ohio EPA District Office or local air agency in accordance with paragraph (B) of OAC rule 3745-15-06. Except as provided in that rule, any scheduled maintenance or malfunction necessitating the shutdown or bypassing of any air pollution control system(s) shall be accompanied by the shutdown of the emissions unit(s) that is (are) served by such control system(s).

**6. Permit Transfers**

Any transferee of this permit shall assume the responsibilities of the prior permit holder. The appropriate Ohio EPA District Office or local air agency must be notified in writing of any transfer of this permit.

**7. Air Pollution Nuisance**

The air contaminants emitted by the emissions units covered by this permit shall not cause a public nuisance, in violation of OAC rule 3745-15-07.

**8. Termination of Permit to Install**

This Permit to Install shall terminate within eighteen months of the effective date of the Permit to Install if the owner or operator has not undertaken a continuing program of installation or modification or has not entered into a binding contractual obligation to undertake and complete within a reasonable time a continuing program of installation or modification. This deadline may be extended by up to 12 months if application is made to the Director within a reasonable time before the termination date and the party shows good cause for any such extension.

**9. Construction of New Sources(s)**

The proposed emissions unit(s) shall be constructed in strict accordance with the plans and application submitted for this permit to the Director of the Ohio Environmental Protection Agency. There may be no deviation from the approved plans without the express, written approval of the Agency. Any deviations from the approved plans or the above conditions may lead to such sanctions and penalties as provided under Ohio law. Approval of these plans does not constitute an assurance that the proposed facilities will operate in compliance with all Ohio laws and regulations. Additional facilities shall be installed upon orders of the Ohio

Environmental Protection Agency if the proposed sources are inadequate or cannot meet applicable standards.

If the construction of the proposed emissions unit(s) has already begun or has been completed prior to the date the Director of the Environmental Protection Agency approves the permit application and plans, the approval does not constitute expressed or implied assurance that the proposed facility has been constructed in accordance with the approved plans. The action of beginning and/or completing construction prior to obtaining the Director's approval constitutes a violation of OAC rule 3745-31-02. Furthermore, issuance of the Permit to Install does not constitute an assurance that the proposed source will operate in compliance with all Ohio laws and regulations. Approval of the plans in any case is not to be construed as an approval of the facility as constructed and/or completed. Moreover, issuance of the Permit to Install is not to be construed as a waiver of any rights that the Ohio Environmental Protection Agency (or other persons) may have against the applicant for starting construction prior to the effective date of the permit. Additional facilities shall be installed upon orders of the Ohio Environmental Protection Agency if the proposed facilities prove to be inadequate or cannot meet applicable standards.

**10. Public Disclosure**

The facility is hereby notified that this permit, and all agency records concerning the operation of this permitted source, are subject to public disclosure in accordance with OAC rule 3745-49-03.

**11. Applicability**

This Permit to Install is applicable only to the emissions unit(s) identified in the Permit to Install. Separate application must be made to the Director for the installation or modification of any other emissions unit(s).

**12. Best Available Technology**

As specified in OAC Rule 3745-31-05, all new sources must employ Best Available Technology (BAT). Compliance with the terms and conditions of this permit will fulfill this requirement.

**13. Source Operation and Operating Permit Requirements After Completion of Construction**

This facility is permitted to operate each source described by this Permit to Install for a period of up to one year from the date the source commenced operation. This permission to operate is granted only if the facility complies with all requirements contained in this permit and all applicable air pollution laws, regulations, and policies. Pursuant to OAC Chapter 3745-35, the permittee shall submit a complete operating permit application within thirty (30) days after commencing operation of the emissions unit(s) covered by this permit.

**Hunting Industrial Coatings**  
**PTI Application: 14-05039**  
**Issued: 2/13/2001**

**Facility ID: 1431480257**

**14. Construction Compliance Certification**

The applicant shall provide Ohio EPA with a written certification (see enclosed form) that the facility has been constructed in accordance with the Permit to Install application and the terms and conditions of the Permit to Install. The certification shall be provided to Ohio EPA upon completion of construction but prior to startup of the source.

**15. Fees**

The permittee shall pay fees to the Director of the Ohio EPA in accordance with ORC section 3745.11 and OAC Chapter 3745-78. The permittee shall pay all applicable Permit to Install fees within 30 days after the issuance of this Permit to Install.

**B. Permit to Install Summary of Allowable Emissions**

The following information summarizes the total allowable emissions, by pollutant, based on the individual allowable emissions of each air contaminant source identified in this permit.

**SUMMARY (for informational purposes only)**  
**TOTAL PERMIT TO INSTALL ALLOWABLE EMISSIONS**

<u>Pollutant</u>	<u>Tons Per Year</u>
OC	1.88
PM/PM10	7.06

**PART II - SPECIAL TERMS AND CONDITIONS FOR SPECIFIC EMISSIONS UNIT(S)**

**A. Applicable Emissions Limitations and/or Control Requirements**

1. The specific operations(s), property, and/or equipment which constitute this emissions unit are listed in the following table along with the applicable rules and/or requirements and with the applicable emissions limitations and/or control measures. Emissions from this unit shall not exceed the listed limitations, and the listed control measures shall be specified in narrative form following the table.

<u>Operations, Property, and/or Equipment</u>	<u>Applicable Rules/Requirements</u>	<u>Applicable Emissions Limitations/Control Measures</u>
P018 - Schold high speed paint mixer #129	OAC rule 3745-31-05(A)(3)	1.05 lbs/hr and 0.94 TPY OC 3.96 lbs/hr and 3.53 TPY PM/PM10
		See terms A.2.a., B.1., and B.2.
		The requirements of this rule also include compliance with the requirements of OAC rules 3745-17-07(B)(1) and 3745-17-08(B).
	OAC rule 3745-21-07(G)	Exempt; see term B.1.
	OAC rule 3745-17-07(B)(1)	See term A.2.b.
	OAC rule 3745-17-08(B)	See term A.2.c.

**2. Additional Terms and Conditions**

- 2.a The organic compound (OC) content, as formulated, for each coating produced in this emissions unit shall not exceed 0.5 lb/gallon.
- 2.b Fugitive visible particulate emissions from this emissions unit shall not exceed 20 percent opacity, as a three-minute average, except as specified by rule.

- 2.c** The permittee shall take all steps necessary to ensure proper material load-in procedures, so as to minimize or eliminate visible emissions of fugitive dust.
- 2.d** The hourly emission limitations outlined above are based on the emissions unit's potential to emit (PTE). Therefore, no hourly records are required to demonstrate compliance with these limits.
- 2.e** Compliance with OAC rule 3745-31-05(A)(3) shall be demonstrated by usage and emission limitations, use of non-photochemically reactive materials, OC content limitations and compliance with the air toxics policy.

## **B. Operational Restrictions**

1. The use of photochemically reactive material as defined in OAC rule 3745-21-01(C)(5) is prohibited.
2. The maximum annual coatings production rate from this emissions unit shall not exceed 250,000 gallons per year.

## **C. Monitoring and/or Recordkeeping Requirements**

1. The permittee shall collect and record the following information each month:
  - a. the company identification of each liquid organic material employed in this emissions unit; and
  - b. a record of each liquid organic material employed in this emissions unit indicating, whether or not the liquid organic material is photochemically reactive as identified in OAC rule 3745-21-01(C)(5).
2. The permittee shall collect and record the following information each month for this emissions unit:
  - a. the company identification for each coating produced;
  - b. the number of gallons of each coating produced;
  - c. the total number of gallons of all coatings produced;
  - d. the OC content as formulated, in pounds per gallon, for each coating produced;

- e. the total combined OC emissions from all coatings produced, in pounds or tons [the sum of (b) times (d) times 0.015 (emission factor from AP-42 Table 6.4-1; 5/83) for each coating];
  - f. the amount of pigments employed, in pounds, for each coating produced; and
  - g. the total combined PM/PM10 emissions from all coatings produced, in pounds or tons [the sum of (f) times 0.01 (emission factor from AP-42 Table 6.4-1; 5/83) for each coating].
3. The permit to install for this emissions unit (P018) was evaluated based on the actual materials (typically coatings and cleanup materials) and the design parameters of the emissions unit's exhaust system, as specified by the permittee in the permit to install application. The Ohio EPA's "Review of New Sources of Air Toxic Emissions" policy ("Air Toxic Policy") was applied for each pollutant emitted by this emissions unit using data from the permit to install application and the SCREEN 3.0 model (or other Ohio EPA approved model). The predicted 1-hour maximum ground-level concentration from the use of the SCREEN 3.0 model was compared to the Maximum Ground-Level Concentration (MAGLC).

The following summarizes the results of the modeling for the "worst case" pollutant(s):

Pollutant: 2-butoxyethanol

TLV (ug/m3): 96,663

Maximum Hourly Emission Rate (lbs/hr): 2.10

Predicted 1-Hour Maximum Ground-Level Concentration (ug/m3): 1742

MAGLC (ug/m3): 2301

Physical changes to or in the method of operation of the emissions unit after its installation or modification could affect the parameters used to determine whether or not the "Air Toxics Policy" is satisfied. Consequently, prior to making a change that could impact such parameters, the permittee shall conduct an evaluation to determine that the "Air Toxic Policy" will still be satisfied. If, upon evaluation, the permittee determines that the "Air Toxic Policy" will not be satisfied, the permittee will not make the change. Changes that can affect the parameters used in the "Air Toxic Policy" include the following:

Emissions Unit ID: **P018**

- a. changes in the composition of the materials used (typically for coatings or cleanup materials), or the use of new materials, that would result in the emission of a compound with a lower Threshold Limit Value (TLV), as indicated in the most recent version of the handbook entitled "American Conference of Governmental Industrial Hygienists (ACGIH)," than the lowest TLV value previously modeled;
- b. changes in the composition of the materials, or use of new materials, that would result in an increase in emissions of any pollutant with a listed TLV that was proposed in the application and modeled: and
- c. physical changes to the emissions unit or its exhaust parameters (e.g., increased/decreased exhaust flow, changes in stack height, changes in stack diameter, etc.).

If the permittee determines that the "Air Toxic Policy" will be satisfied with the above changes, the Ohio EPA will not consider the change(s) to be a "modification" under OAC rule 3745-31-01(VV)(1)(a)(ii), and a modification of the existing permit to install will not be required. If the change(s) is(are) defined as a modification under other provisions of the modification definition [other than (VV)(1)(a)(ii)], then the permittee shall obtain a final permit to install prior to the change.

The permittee shall collect, record, and retain the following information when it conducts evaluations to determine that the changed emissions unit will satisfy the Air Toxic Policy:"

- a. a description of the parameters changed (composition of materials, new pollutants emitted, change in stack/exhaust parameters, etc.);
- b. documentation of its evaluation and determination that the changed emissions unit still satisfies the "Air Toxic Policy"; and
- c. when the computer modeling is performed, a copy of the resulting computer model runs that show the results of the application of the "Air Toxic Policy" for the change.

#### **D. Reporting Requirements**

1. The permittee shall notify the Hamilton County Department of Environmental Services in writing identifying each day during which any photochemically reactive material [as defined in OAC rule 3745-21-01(C)(5)] was employed in this emissions unit. This report shall identify the cause for the use of the photochemically reactive material(s) and the estimated total quantity of organic compound emissions emitted each such day. This report shall be submitted to the Hamilton County Department of Environmental Services within 45 days after the exceedance occurs.
2. The permittee shall submit deviation (excursion) reports which identify any monthly record

showing the use of any coating formulation which does not comply with the limits in term A.2.a. of this permit, and the actual OC content for each such coating.

3. The permittee shall also submit annual reports which specify the total OC emissions, the total PM/PM10 emissions, and the total gallons of coatings produced from this emissions unit for the previous calendar year. These reports shall be submitted by January 31 of each year.
4. The deviation reports shall be submitted in accordance with the reporting requirements of the General Terms and Conditions of this permit.

**E. Testing Requirements**

1. Compliance with the OC and PM/PM10 emission limitations shall be determined by the recordkeeping requirements specified in term C.2.
2. Formulation data or USEPA Method 24 (for coatings) or 24A (for flexographic and rotogravure printing inks and related coatings) shall be used to determine the OC contents of the inks and coatings.
3. Compliance with the fugitive visible particulate limitation shall be demonstrated by the methods outlined in 40 CFR Part 60, Appendix A, Method 9.
4. Compliance with the coating production limitation in term B.2. shall be determined by the record keeping requirements as specified in term C.2.
5. Compliance with the term B.1. shall be determined by the record keeping requirements as specified in term C.1.

**F. Miscellaneous Requirements**

None

**PART II - SPECIAL TERMS AND CONDITIONS FOR SPECIFIC EMISSIONS UNIT(S)**

**A. Applicable Emissions Limitations and/or Control Requirements**

1. The specific operations(s), property, and/or equipment which constitute this emissions unit are listed in the following table along with the applicable rules and/or requirements and with the applicable emissions limitations and/or control measures. Emissions from this unit shall not exceed the listed limitations, and the listed control measures shall be specified in narrative form following the table.

<u>Operations, Property, and/or Equipment</u>	<u>Applicable Rules/Requirements</u>	<u>Applicable Emissions Limitations/Control Measures</u>
P019 - Schold high speed paint mixer #130	OAC rule 3745-31-05(A)(3)	1.05 lbs/hr and 0.94 TPY OC 3.96 lbs/hr and 3.53 TPY PM/PM10  See terms A.2.a., B.1., and B.2.  The requirements of this rule also include compliance with the requirements of OAC rules 3745-17-07(B)(1) and 3745-17-08(B).
	OAC rule 3745-21-07(G)	Exempt; see term B.1.
	OAC rule 3745-17-07(B)(1)	See term A.2.b.
	OAC rule 3745-17-08(B)	See term A.2.c.

**2. Additional Terms and Conditions**

- 2.a The organic compound (OC) content, as formulated, for each coating produced in this emissions unit shall not exceed 0.5 lb/gallon.
- 2.b Fugitive visible particulate emissions from this emissions unit shall not exceed 20 percent opacity, as a three-minute average, except as specified by rule.

- 2.c** The permittee shall take all steps necessary to ensure proper material load-in procedures, so as to minimize or eliminate visible emissions of fugitive dust.
- 2.d** The hourly emission limitations outlined above are based on the emissions unit's potential to emit (PTE). Therefore, no hourly records are required to demonstrate compliance with these limits.
- 2.e** Compliance with OAC rule 3745-31-05(A)(3) shall be demonstrated by usage and emission limitations, use of non-photochemically reactive materials, OC content limitations and compliance with the air toxics policy.

## **B. Operational Restrictions**

- 1. The use of photochemically reactive material as defined in OAC rule 3745-21-01(C)(5) is prohibited.
- 2. The maximum annual coatings production rate from this emissions unit shall not exceed 250,000 gallons per year.

## **C. Monitoring and/or Recordkeeping Requirements**

- 1. The permittee shall collect and record the following information each month:
  - a. The company identification of each liquid organic material employed in this emissions unit; and
  - b. A record of each liquid organic material employed in this emissions unit indicating, whether or not the liquid organic material is photochemically reactive as identified in OAC rule 3745-21-01(C)(5).
- 2. The permittee shall collect and record the following information each month for this emissions unit:
  - a. The company identification for each coating produced;
  - b. The number of gallons of each coating produced;
  - c. The total number of gallons of all coatings produced;

- d. The OC content as formulated, in pounds per gallon, for each coating produced;
  - e. The total combined OC emissions from all coatings produced, in pounds or tons [the sum of (b) times (d) times 0.015 (emission factor from AP-42 Table 6.4-1; 5/83) for each coating];
  - f. The amount of pigments employed, in pounds, for each coating produced; and
  - g. The total combined PM/PM10 emissions from all coatings produced, in pounds or tons [the sum of (f) times 0.01 (emission factor from AP-42 Table 6.4-1; 5/83) for each coating].
3. The permit to install for this emissions unit (P019) was evaluated based on the actual materials (typically coatings and cleanup materials) and the design parameters of the emissions unit's exhaust system, as specified by the permittee in the permit to install application. The Ohio EPA's "Review of New Sources of Air Toxic Emissions" policy ("Air Toxic Policy") was applied for each pollutant emitted by this emissions unit using data from the permit to install application and the SCREEN 3.0 model (or other Ohio EPA approved model). The predicted 1-hour maximum ground-level concentration from the use of the SCREEN 3.0 model was compared to the Maximum Ground-Level Concentration (MAGLC).

The following summarizes the results of the modeling for the "worst case" pollutant(s):

Pollutant: 2-butoxyethanol

TLV (ug/m3): 96,663

Maximum Hourly Emission Rate (lbs/hr): 2.10

Predicted 1-Hour Maximum Ground-Level Concentration (ug/m3): 1742

MAGLC (ug/m3): 2301

Physical changes to or in the method of operation of the emissions unit after its installation or modification could affect the parameters used to determine whether or not the "Air Toxics Policy" is satisfied. Consequently, prior to making a change that could impact such parameters, the permittee shall conduct an evaluation to determine that the "Air Toxic Policy" will still be satisfied. If, upon evaluation, the permittee determines that the "Air Toxic Policy" will not be satisfied, the permittee will not make the change. Changes that can affect the parameters used in the "Air Toxic Policy" include the following:

- a. changes in the composition of the materials used (typically for coatings or cleanup materials), or the use of new materials, that would result in the emission of a compound with a lower Threshold Limit Value (TLV), as indicated in the most recent version of the handbook entitled "American Conference of Governmental Industrial Hygienists (ACGIH)," than the lowest TLV value previously modeled;
- b. changes in the composition of the materials, or use of new materials, that would result in an increase in emissions of any pollutant with a listed TLV that was proposed in the application and modeled: and
- c. physical changes to the emissions unit or its exhaust parameters (e.g., increased/decreased exhaust flow, changes in stack height, changes in stack diameter, etc.).

If the permittee determines that the "Air Toxic Policy" will be satisfied with the above changes, the Ohio EPA will not consider the change(s) to be a "modification" under OAC rule 3745-31-01(VV)(1)(a)(ii), and a modification of the existing permit to install will not be required. If the change(s) is(are) defined as a modification under other provisions of the modification definition [other than (VV)(1)(a)(ii)], then the permittee shall obtain a final permit to install prior to the change.

The permittee shall collect, record, and retain the following information when it conducts evaluations to determine that the changed emissions unit will satisfy the Air Toxic Policy:"

- a. a description of the parameters changed (composition of materials, new pollutants emitted, change in stack/exhaust parameters, etc.);
- b. documentation of its evaluation and determination that the changed emissions unit still satisfies the "Air Toxic Policy"; and
- c. when the computer modeling is performed, a copy of the resulting computer model runs that show the results of the application of the "Air Toxic Policy" for the change.

#### **D. Reporting Requirements**

1. The permittee shall notify the Hamilton County Department of Environmental Services in writing identifying each day during which any photochemically reactive material [as defined in OAC rule 3745-21-01(C)(5)] was employed in this emissions unit. This report shall identify the cause for the use of the photochemically reactive material(s) and the estimated total quantity of organic compound emissions emitted each such day. This report shall be submitted to the Hamilton County Department of Environmental Services within 45 days after the exceedance occurs.

2. The permittee shall submit deviation (excursion) reports which identify any monthly record showing the use of any coating formulation which does not comply with the limits in term A.2.a. of this permit, and the actual OC content for each such coating.
3. The permittee shall also submit annual reports which specify the total OC emissions, the total PM/PM10 emissions, and the total gallons of coatings produced from this emissions unit for the previous calendar year. These reports shall be submitted by January 31 of each year.
4. The deviation reports shall be submitted in accordance with the reporting requirements of the General Terms and Conditions of this permit.

#### **E. Testing Requirements**

1. Compliance with the OC and PM/PM10 emission limitations shall be determined by the recordkeeping requirements specified in term C.2.
2. Formulation data or USEPA Method 24 (for coatings) or 24A (for flexographic and rotogravure printing inks and related coatings) shall be used to determine the OC contents of the inks and coatings.
3. Compliance with the fugitive visible particulate limitation shall be demonstrated by the methods outlined in 40 CFR Part 60, Appendix A, Method 9.
4. Compliance with the coating production limitation in term B.2. shall be determined by the record keeping requirements as specified in term C.2.
5. Compliance with the term B.1. shall be determined by the record keeping requirements as specified in term C.1.

PTI Review Narrative  
PTI 14-05039

Hunting Industrial Coatings  
10448 Chester Road  
Cincinnati, OH 45215  
Premise Number: 1431480257

Hunting Industrial Coatings is a manufacturer of industrial coatings. This permit to install is for two high speed paint mixers, Schold's mixers #129 and #130, and has been assigned OEPA emissions unit numbers P018 and P019. These mixers will be required to produce only waterborne, non-photochemically reactive coatings.

The applicable rules for these emissions units are OAC rules 3745-31-05(A)(3), 3745-21-07(G), 3745-17-07(B)(1), 3745-17-08(B) and 3745-15-07. BAT has been determined to be compliance with all applicable rules, usage and emission limitations, use of non-photochemically reactive materials, OC content limitations and compliance with the air toxics policy.

Allowable emissions for each mixer are 1.05 lbs/hr and 0.94 TPY OC and 3.96 lbs/hr and 3.53 TPY PM/PM10. The hourly emissions limitations are based on the mixer's PTE, so no hourly recordkeeping is required. Emission factors for OC and PM/PM10 were taken from AP-42 Table 6.4-1 (5/83). The annual emissions are based on the usage limit of 250,000 gallons/year of coatings produced from each emissions unit. Compliance with the permit limitations will be demonstrated by monthly recordkeeping and deviation and annual reporting requirements.

PTI Number: 14-05039

Facility ID: 1431480257

FACILITY NAME Hunting Industrial CoatingsFACILITY DESCRIPTION Coating ManufacturerCITY/TWP CincinnatiEmissions Unit ID: **P019**

Air toxics modeling was required for 2-butoxyethanol. The MAGLC for this air toxic is 2301 ug/m<sup>3</sup>, and the SCREEN3 fugitive modeling resulted in a maximum concentration of 1,742 ug/m<sup>3</sup>. Therefore, the air toxics modeling passed for these two new sources.

Approval of this PTI is recommended.

Permit Fee: 2 emissions units (P018 and P019) at PWR of 1001-5000 lbs/hr = \$400 x 2 = **\$800**
