RE: DRAFT AIR POLLUTION PERMIT-TO-INSTALL AND OPERATE
Facility ID: 0149010100
Permit Number: P0104975
Permit Type: Administrative Modification
County: Madison

Dear Permit Holder:

A draft of the Ohio Administrative Code (OAC) Chapter 3745-31 Air Pollution Permit-to-Install and Operate for the referenced facility has been issued for the emissions unit(s) listed in the Authorization section of the enclosed draft permit. This draft action is not an authorization to begin construction or modification of your emissions unit(s). The purpose of this draft is to solicit comments on the permit. A public notice will appear in the Ohio EPA Weekly Review and the local newspaper, The Madison Press. A copy of the public notice and the draft permit are enclosed. This permit has been posted to the Division of Air Pollution Control Web page <http://www.epa.state.oh.us/dapc> in Microsoft Word and Adobe Acrobat format. Comments will be accepted as a marked-up copy of the draft permit or in narrative format. Any comments must be sent to the following:

Andrew Hall
Permit Review/Development Section
Ohio EPA, DAPC
122 South Front Street
Columbus, Ohio 43215

and Ohio EPA DAPC, Central District Office
50 West Town Street, 6th Floor
P.O. Box 1049
Columbus, OH 43216-1049

Comments and/or a request for a public hearing will be accepted within 30 days of the date the notice is published in the newspaper. You will be notified in writing if a public hearing is scheduled. A decision on issuing a final permit-to-install and operate will be made after consideration of comments received and oral testimony if a public hearing is conducted. Any permit fee that will be due upon issuance of a final Permit-to-Install and Operate is indicated in the Authorization section. Please do not submit any payment now. If you have any questions, please contact Ohio EPA DAPC, Central District Office at (614)728-3778.

Sincerely,

Michael W. Ahern, Manager
Permit Issuance and Data Management Section, DAPC

PUBLIC NOTICE
Issuance of Draft Air Pollution Permit-To-Install and Operate
Nissen Chemitec America

Issue Date: 6/23/2009
Permit Number: P0104975
Permit Type: Administrative Modification
Permit Description: Administrative Modification Request to increase VOC content restriction for clean-up material and decrease allowable usage limitation for clean-up material such that the combined VOC limitation is unchanged.
Facility ID: 0149010100
Facility Location: Nissen Chemitec America
350 E HIGH ST,
London, OH 43140
Facility Description: All Other Plastics Product Manufacturing

Chris Korleski, Director of the Ohio Environmental Protection Agency, 50 West Town Street, Columbus Ohio has issued a draft action of an air pollution control, federally enforceable permit-to-install and operate (PTIO) for the facility at the location identified above on the date indicated. Comments concerning this draft action, or a request for a public meeting, must be sent in writing no later than thirty (30) days from the date this notice is published. All comments, questions, requests for permit applications or other pertinent documentation, and correspondence concerning this action must be directed to Kelly Toth at Ohio EPA DAPC, Central District Office, 50 West Town Street, 6th Floor P.O. Box 1049 or (614)728-3778. The permit can be downloaded from the Web page: www.epa.state.oh.us/dapc

Permit Strategy Write-Up

1. Check all that apply:

Synthetic Minor Determination

Netting Determination

2. Source Description:

The facility has requested an Administrative Modification to FEPTIO P0103655 to accommodate inconsistencies in the VOC concentration of the clean-up material employed by EUs R005, R006, R007, R008, R009, and R010. By increasing the allowable VOC concentration of the clean-up material and decreasing the allowable rolling 12-month usage (gallons) the facility will not be increasing the limitation on combined rolling VOC emissions (68.3 tpy). The 17.1 lb/hr VOC restriction included in the FEPTIO is unaffected by these modifications because the VOC limitation excludes clean-up materials.

Nissen Chemitec America, Inc. operates a plastic parts coating facility in London, Madison County, non-attainment for ozone. The facility is currently a Synthetic Minor Stationary Source pursuant to Title V operating permit requirements for criteria pollutants and HAPs. Nissen Chemitec America, Inc. proposes a facility-wide VOC and HAP emission limitation, to limit potential to emit, to remain non-Title V and avoid non-attainment review. They have proposed to limit their coating and clean up usages, in order to remain a Synthetic Minor and avoid non-attainment review.

3. Facility Emissions and Attainment Status:

Nissen Chemitec America is currently classified as a Synthetic Minor Stationary Source pursuant to Title V operating permit requirements for all criteria pollutants and HAP(s). Madison County is in attainment for all criteria pollutants except ozone.

4. Source Emissions:

Potential emissions of Hexane, single HAP, from all emissions units after the new adhesive is utilized and without any federally enforceable restrictions are 66.5 tons per year. Limiting the number of gallons of coating applied in emission units R005, R006, R007, R008, R009, and R010 will limit Hexane emissions from these emission units to 9.9 tons per rolling, 12-month summation. There are no other HAP contributing emission units at this facility.

Potential emissions of combined HAPs from all emissions units after the new units are installed and without any federally enforceable restrictions are 128.0 tons per year. Limiting the number of gallons of coating applied in emissions R005, R006, R007, R008, R009, and R010 will limit combined HAP emissions from these emission units to 19.0 tons per rolling, 12-month summation. There are no other HAP contributing emission units at this facility.

Potential emissions of VOC from all emissions units after the new units are installed and without any federally enforceable restrictions are 451 tons per year. Limiting the number of gallons of coating applied in emissions R005, R006, R007, R008, R009, and R010 will limit VOC emissions from these emission units to 68.3 tons per rolling, 12-month summation. There are no other VOC contributing emission units at this facility.

State of Ohio Environmental Protection Agency
 Division of Air Pollution Control

Permit Strategy Write-Up
Permit Number: P0104975
Facility ID: 0149010100

5. Conclusion:

Nissen Chemitec America will remain a Synthetic Minor facility and avoid non-attainment review by means of limiting the number of gallons of coating applied, effectively restricting the facility PTE for a single HAP, combined HAP, and VOC to below Major Stationary Source Title V operating permit requirement threshold levels. Monthly monitoring, record keeping and calculations, along with and quarterly deviation reports for emission units R005, R006, R007, R008, R009, and R010, will be required to monitor compliance. Since allowable emissions are below Major Stationary Source Title V operating permit requirements threshold levels, this facility will remain a minor source.

6. Please provide additional notes or comments as necessary:

None

7. Total Permit Allowable Emissions Summary (for informational purposes only):

<u>Pollutant</u>	<u>Tons Per Year</u>
PE	5.4
VOC	68.3
Single HAP	9.9
Combined HAP	24.9

Draft Permit-to-Install and Operate

Permit Number: P0104975

Facility ID: 0149010100

Effective Date: To be entered upon final issuance

A. Standard Terms and Conditions

1. What does this permit-to-install and operate ("PTIO") allow me to do?

This permit allows you to install and operate the emissions unit(s) identified in this PTIO. You must install and operate the unit(s) in accordance with the application you submitted and all the terms and conditions contained in this PTIO, including emission limits and those terms that ensure compliance with the emission limits (for example, operating, recordkeeping and monitoring requirements).

2. Who is responsible for complying with this permit?

The person identified on the "Authorization" page, above, is responsible for complying with this permit until the permit is revoked, terminated, or transferred. "Person" means a person, firm, corporation, association, or partnership. The words "you," "your," or "permittee" refer to the "person" identified on the "Authorization" page above.

The permit applies only to the emissions unit(s) identified in the permit. If you install or modify any other equipment that requires an air permit, you must apply for an additional PTIO(s) for these sources.

3. What records must I keep under this permit?

You must keep all records required by this permit, including monitoring data, test results, strip-chart recordings, calibration data, maintenance records, and any other record required by this permit for five years from the date the record was created. You can keep these records electronically, provided they can be made available to Ohio EPA during an inspection at the facility. Failure to make requested records available to Ohio EPA upon request is a violation of this permit requirement.

4. What are my permit fees and when do I pay them?

There are two fees associated with permitted air contaminant sources in Ohio:

- PTIO fee. This one-time fee is based on a fee schedule in accordance with Ohio Revised Code (ORC) section 3745.11, or based on a time and materials charge for permit application review and permit processing if required by the Director.

You will be sent an invoice for this fee after you receive this PTIO and payment is due within 30 days of the invoice date. You are required to pay the fee for this PTIO even if you do not install or modify your operations as authorized by this permit.

- Annual emissions fee. Ohio EPA will assess a separate fee based on the total annual emissions from your facility. You self-report your emissions in accordance with Ohio Administrative Code (OAC) Chapter 3745-78. This fee assessed is based on a fee schedule in ORC section 3745.11 and funds Ohio EPA's permit compliance oversight activities. For facilities that are permitted as synthetic minor sources, the fee schedule is adjusted annually for inflation. Ohio EPA will notify you when it is time to report your emissions and to pay your annual emission fees.

5. When does my PTIO expire, and when do I need to submit my renewal application?

This permit expires on the date identified at the beginning of this permit document (see "Authorization" page above) and you must submit a renewal application to renew the permit. Ohio EPA will send a renewal notice to you approximately six months prior to the expiration date of this permit. However, it is

very important that you submit a complete renewal permit application (postmarked prior to expiration of this permit) even if you do not receive the renewal notice.

If a complete renewal application is submitted before the expiration date, Ohio EPA considers this a timely application for purposes of ORC section 119.06, and you are authorized to continue operating the emissions unit(s) covered by this permit beyond the expiration date of this permit until final action is taken by Ohio EPA on the renewal application.

6. What happens to this permit if my project is delayed or I do not install or modify my source?

This PTIO expires 18 months after the issue date identified on the "Authorization" page above unless otherwise specified if you have not (1) started constructing the new or modified emission sources identified in this permit, or (2) entered into a binding contract to undertake such construction. This deadline can be extended by up to 12 months, provided you apply to Ohio EPA for this extension within a reasonable time before the 18-month period has ended and you can show good cause for any such extension.

7. What reports must I submit under this permit?

An annual permit evaluation report (PER) is required in addition to any malfunction reporting required by OAC rule 3745-15-06 or other specific rule-based reporting requirement identified in this permit. Your PER due date is identified in the Authorization section of this permit.

8. If I am required to obtain a Title V operating permit in the future, what happens to the operating provisions and PER obligations under this permit?

If you are required to obtain a Title V permit under OAC Chapter 3745-77 in the future, the permit-to-operate portion of this permit will be superseded by the issued Title V permit. From the effective date of the Title V permit forward, this PTIO will effectively become a PTI (permit-to-install) in accordance with OAC rule 3745-31-02(B). The following terms and conditions will no longer be applicable after issuance of the Title V permit: Section B, Term 1.b) and Section C, for each emissions unit, Term a)(2).

The PER requirements in this permit remain effective until the date the Title V permit is issued and is effective, and cease to apply after the effective date of the Title V permit. The final PER obligation will cover operations up to the effective date of the Title V permit and must be submitted on or before the submission deadline identified in this permit on the last day prior to the effective date of the Title V permit.

9. What are my obligations when I perform scheduled maintenance on air pollution control equipment?

You must perform scheduled maintenance of air pollution control equipment in accordance with OAC rule 3745-15-06(A). If scheduled maintenance requires shutting down or bypassing any air pollution control equipment, you must also shut down the emissions unit(s) served by the air pollution control equipment during maintenance, unless the conditions of OAC rule 3745-15-06(A)(3) are met. Any emissions that exceed permitted amount(s) under this permit (unless specifically exempted by rule) must be reported as deviations in the annual permit evaluation report (PER), including nonexempt excess emissions that occur during approved scheduled maintenance.

10. Do I have to report malfunctions of emissions units or air pollution control equipment? If so, how must I report?

If you have a reportable malfunction of any emissions unit(s) or any associated air pollution control system, you must report this to the Ohio EPA DAPC, Central District Office in accordance with OAC rule 3745-15-06(B). Malfunctions that must be reported are those that result in emissions that exceed permitted emission levels. It is your responsibility to evaluate control equipment breakdowns and operational upsets to determine if a reportable malfunction has occurred.

If you have a malfunction, but determine that it is not a reportable malfunction under OAC rule 3745-15-06(B), it is recommended that you maintain records associated with control equipment breakdown or process upsets. Although it is not a requirement of this permit, Ohio EPA recommends that you maintain records for non-reportable malfunctions.

11. Can Ohio EPA or my local air agency inspect the facility where the emission unit(s) is/are located?

Yes. Under Ohio law, the Director or his authorized representative may inspect the facility, conduct tests, examine records or reports to determine compliance with air pollution laws and regulations and the terms and conditions of this permit. You must provide, within a reasonable time, any information Ohio EPA requests either verbally or in writing.

12. What happens if one or more emissions units operated under this permit is/are shut down permanently?

Ohio EPA can terminate the permit terms associated with any permanently shut down emissions unit. "Shut down" means the emissions unit has been physically removed from service or has been altered in such a way that it can no longer operate without a subsequent "modification" or "installation" as defined in OAC Chapter 3745-31.

You should notify Ohio EPA of any emissions unit that is permanently shut down by submitting a certification that identifies the date on which the emissions unit was permanently shut down. The certification must be submitted by an authorized official from the facility. You cannot continue to operate an emission unit once the certification has been submitted to Ohio EPA by the authorized official.

You must comply with all recordkeeping and reporting for any permanently shut down emissions unit in accordance with the provisions of the permit, regulations or laws that were enforceable during the period of operation, such as the requirement to submit a PER, air fee emission report, or malfunction report. You must also keep all records relating to any permanently shutdown emissions unit, generated while the emissions unit was in operation, for at least five years from the date the record was generated.

Again, you cannot resume operation of any emissions unit certified by the authorized official as being permanently shut down without first applying for and obtaining a permit pursuant to OAC Chapter 3745-31.

13. Can I transfer this permit to a new owner or operator?

You can transfer this permit to a new owner or operator. If you transfer the permit, you must follow the procedures in OAC Chapter 3745-31, including notifying Ohio EPA or the local air agency of the change in ownership or operator. Any transferee of this permit must assume the responsibilities of the transferor permit holder.

State of Ohio Environmental Protection Agency
Division of Air Pollution Control

Draft Permit-to-Install and Operate

Permit Number: P0104975

Facility ID: 0149010100

Effective Date: To be entered upon final issuance

14. Does compliance with this permit constitute compliance with OAC rule 3745-15-07, "air pollution nuisance"?

This permit and OAC rule 3745-15-07 prohibit operation of the air contaminant source(s) regulated under this permit in a manner that causes a nuisance. Ohio EPA can require additional controls or modification of the requirements of this permit through enforcement orders or judicial enforcement action if, upon investigation, Ohio EPA determines existing operations are causing a nuisance.

15. What happens if a portion of this permit is determined to be invalid?

If a portion of this permit is determined to be invalid, the remainder of the terms and conditions remain valid and enforceable. The exception is where the enforceability of terms and conditions are dependent on the term or condition that was declared invalid.

C. Emissions Unit Terms and Conditions

1. Emissions Unit Group - Spray Booths: R005, R006, R007, R008, R009, R010,

EU ID	Operations, Property and/or Equipment Description
R005	Adhesive Line No. 1 with Electric Oven
R006	Adhesive Line No. 2 with Electric Oven
R007	Honda adhesive coating line No. 1 with two spray booths and one IR oven
R008	Honda adhesive coating line No. 2 with two spray booths and one IR oven
R009	Manual touch up spray booth
R010	Manual touch up spray booth

a) This permit document constitutes a permit-to-install issued in accordance with ORC 3704.03(F) and a permit-to-operate issued in accordance with ORC 3704.03(G).

(1) For the purpose of a permit-to-install document, the emissions unit terms and conditions identified below are federally enforceable with the exception of those listed below which are enforceable under state law only.

a. d)(4), d)(5), d)(6) and d)(7)

(2) For the purpose of a permit-to-operate document, the emissions unit terms and conditions identified below are enforceable under state law only with the exception of those listed below which are federally enforceable.

a. c)(2), c)(3), c)(4), d)(1), d)(2), e)(2), e)(3), f)(1)b., f)(1)c., and f)(1)d.

b) Applicable Emissions Limitations and/or Control Requirements

(1) The specific operations(s), property, and/or equipment that constitute each emissions unit along with the applicable rules and/or requirements and with the applicable emissions limitations and/or control measures. Emissions from each unit shall not exceed the listed limitations, and the listed control measures shall be specified in narrative form following the table.

	Applicable Rules/Requirements	Applicable Emissions Limitations/Control Measures
a.	OAC rule 3745-31-05(A)(3)	<p>Volatile organic compound (VOC) emissions shall not exceed 17.1 lbs/hr, excluding clean-up materials.</p> <p>Particulate emissions (PE) shall not exceed 0.2 lb/hr and 0.9 ton/year.</p> <p>See b)(2)a. below.</p> <p>The requirements of this rule also include compliance with the requirements of OAC rules 3745-17-07(A)(1) and 3745-31-05(D)</p>
b.	OAC rule 3745-31-05(D)	The combined total VOC emissions shall

	Applicable Rules/Requirements	Applicable Emissions Limitations/Control Measures
		<p>not exceed 68.3 tons per rolling 12-month period for all coatings and cleanup materials used in units R005, R006, R007, R008, R009 and R010.</p> <p>The combined total hazardous air pollutants (HAP) emissions shall not exceed 9.9 tons per rolling 12-month period for all single HAP and 24.9 tons per rolling 12-month period for all HAP from all coatings and cleanup materials used in units R005, R006, R007, R008, R009 and R010.</p> <p>See c)(2), c)(3), and c)(4) below.</p>
c.	OAC rule 3745-17-11(B)(1)	The hourly PE limitation established by this rule is less stringent than that established pursuant to OAC rule 3745-31-05(A)(3).
d.	OAC rule 3745-17-07(A)(1)	Visible PE from any stack shall not exceed 20% opacity, as a six-minute average, except as provided by rule.

(2) Additional Terms and Conditions

a. The hourly VOC limitation and the hourly and annual PE limitations were established to reflect the potential to emit for this emissions unit. Therefore, it is not necessary to develop additional monitoring, record keeping and/or reporting requirements to ensure compliance with these limits.

c) Operational Restrictions

- (1) The permittee shall vent all emissions through the dry filtration system whenever this emissions unit is in operation.
- (2) The maximum annual coating usage for emissions units R005, R006, R007, R008, R009 and R010 shall not exceed 23,400 gallons, based upon a rolling, 12-month summation of the coating usage figures.
- (3) Coating content may not exceed 5.69 pounds VOC per gallon. Cleanup content may not exceed 7.50 pounds VOC per gallon.
- (4) The maximum annual clean up usage for emissions units R005, R006, R007, R008, R009 and R010 shall not exceed 460 gallons, based upon a rolling, 12-month summation of the coating usage figures.

d) Monitoring and/or Recordkeeping Requirements

(1) The permittee shall collect and record the following information each month for the coating operation:

- a. the name and identification number of each coating and cleanup material, as applied;
- b. the number of gallons of each coating employed;
- c. the number of gallons of each cleanup material employed;
- d. the VOC content of each coating, in pounds of VOC per gallon of coating, excluding water and exempt solvents; and
- e. the VOC content of each cleanup material, in pounds of VOC per gallon of cleanup, excluding water and exempt solvents.

[Note: The coating information must be for the coatings as employed, including any thinning solvents added at the emissions unit.]

(2) The permittee shall maintain monthly records of the following information:

- a. the monthly VOC emission rate for all coatings and cleanup materials combined, calculated by summing the calculated emission rate of each coating and cleanup material, i.e., $\frac{\{(d)(1)b.\}(d)(1)d. + \{(d)(1)c.\}(d)(1)e.}}{2000 \text{ lbs/ton}}$, in tons;
- b. the rolling, 12-month summation of the VOC emission rate for all coatings and cleanup materials used in units R005, R006, R007, R008, R009 and R010, in tons;
- c. the rolling, 12-month summation of the coating and cleanup materials usage for all coatings and cleanup materials used in units R005, R006, R007, R008, R009 and R010, in gallons.
- d. the individual HAP¹ content of each HAP for each coating and cleanup materials in pounds of individual HAP per gallon, as applied;
- e. the total combined HAP content of each coating and cleanup materials in pounds of combined HAPs per gallon, as applied (sum of all individual HAP contents from d. above);
- f. the total individual HAP emissions for each HAP from all coating and cleanup material in pounds or tons per rolling, 12-month period (for each HAP the sum of the individual HAP¹ content of each HAP for each coating in term d)(2)d. times term d)(1)b. for each coating and the sum of the individual HAP¹ content of each HAP for each cleanup material in term d)(2)d. times term d)(1)c. for each cleanup material); and
- g. the total combined HAP emissions from all coating and cleanup materials employed, in pounds or tons per month and pounds or tons per rolling, 12-month period (the sum of the total combined HAP content for all coatings in term d)(2)e. times term d)(1)b. for each coating and plus the sum of the total combined HAP

content for all cleanup materials in term d)(2)e. times term d)(1)c. for each cleanup material).

¹ A listing of the HAPs can be found in Section 112(b) of the Clean Air Act or can be obtained by contacting your Ohio EPA field office or local air agency contact. Material Safety Data Sheets typically include a listing of the solvents contained in the coatings or clean materials. This information does not have to be kept on a line-by-line basis.

- (3) The permittee shall maintain daily records that document any time periods when the dry filtration system was not in service when the emissions unit was in operation.
- (4) The permit-to-install (PTI), permit-to-install and operate (PTIO), or federally enforceable permit-to-install and operate (FEPTIO) application for this/these emissions unit(s) R005, R006, R007, R008, R009 and R010 was evaluated based on the actual materials and the design parameters of the emissions unit's(s') exhaust system, as specified by the permittee. The AToxic Air Contaminant Statute, ORC 3704.03(F), was applied to this/these emissions unit(s) for each toxic air contaminant listed in OAC rule 3745-114-01, using data from the permit application; and modeling was performed for each toxic air contaminant(s) emitted at over one ton per year using an air dispersion model such as SCREEN3, AERMOD, or ISCST3, or other Ohio EPA approved model. The predicted 1-hour maximum ground-level concentration result(s) from the approved air dispersion model, was compared to the Maximum Acceptable Ground-Level Concentration (MAGLC), calculated as described in the Ohio EPA guidance document entitled AReview of New Sources of Air Toxic Emissions, Option A, as follows:
 - a. the exposure limit, expressed as a time-weighted average concentration for a conventional 8-hour workday and a 40-hour workweek, for each toxic compound(s) emitted from the emissions unit(s), (as determined from the raw materials processed and/or coatings or other materials applied) has been documented from one of the following sources and in the following order of preference (TLV was and shall be used, if the chemical is listed):
 - i. threshold limit value (TLV) from the American Conference of Governmental Industrial Hygienists= (ACGIH) AThreshold Limit Values for Chemical Substances and Physical Agents Biological Exposure Indices; or
 - ii. STEL (short term exposure limit) or the ceiling value from the American Conference of Governmental Industrial Hygienists= (ACGIH) AThreshold Limit Values for Chemical Substances and Physical Agents Biological Exposure Indices; the STEL or ceiling value is multiplied by 0.737 to convert the 15-minute exposure limit to an equivalent 8-hour TLV.
 - b. The TLV is divided by ten to adjust the standard from the working population to the general public (TLV/10).
 - c. This standard is/was then adjusted to account for the duration of the exposure or the operating hours of the emissions unit(s), i.e., AX hours per day and AY days per week, from that of 8 hours per day and 5 days per week. The resulting calculation was (and shall be) used to determine the Maximum Acceptable Ground-Level Concentration (MAGLC):

$$TLV/10 \times 8/X \times 5/Y = 4 TLV/XY = MAGLC$$

- d. The following summarizes the results of dispersion modeling for the significant toxic contaminants (emitted at 1 or more tons/year) or worst case toxic contaminant(s):

Toxic Contaminant: n-Hexane

TLV (mg/m³): 176

Maximum Hourly Emission Rate (lbs/hr): 2.53

Predicted 1-Hour Maximum Ground-Level Concentration (ug/m³): 336.5

MAGLC (ug/m³): 4196

The permittee, has demonstrated that emissions of n-Hexane, from emissions unit(s) R005, R006, R007, R008, R009 and R010, is calculated to be less than eighty per cent of the maximum acceptable ground level concentration (MAGLC); any new raw material or processing agent shall not be applied without evaluating each component toxic air contaminant in accordance with the Toxic Air Contaminant Statute, ORC 3704.03(F).

- (5) Prior to making any physical changes to or changes in the method of operation of the emissions unit(s), that could impact the parameters or values that were used in the predicted 1-hour maximum ground-level concentration, the permittee shall re-model the change(s) to demonstrate that the MAGLC has not been exceeded. Changes that can affect the parameters/values used in determining the 1-hour maximum ground-level concentration include, but are not limited to, the following:
- a. changes in the composition of the materials used or the use of new materials, that would result in the emission of a new toxic air contaminant with a lower Threshold Limit Value (TLV) than the lowest TLV previously modeled;
 - b. changes in the composition of the materials, or use of new materials, that would result in an increase in emissions of any toxic air contaminant listed in OAC rule 3745-114-01, that was modeled from the initial (or last) application; and
 - c. physical changes to the emissions unit(s) or its/their exhaust parameters (e.g., increased/ decreased exhaust flow, changes in stack height, changes in stack diameter, etc.).

If the permittee determines that the Toxic Air Contaminant Statute will be satisfied for the above changes, the Ohio EPA will not consider the change(s) to be a "modification" under OAC rule 3745-31-01 solely due to a non-restrictive change to a parameter or process operation, where compliance with the Toxic Air Contaminant Statute, ORC 3704.03(F), has been documented. If the change(s) meet(s) the definition of a "modification", the permittee shall apply for and obtain a final PTI, PTIO, or FEPTIO (as applicable) prior to the change. The Director may consider any significant departure from the operations of the emissions unit, described in the permit application, as a modification that results in greater emissions than the emissions rate modeled to determine the ground level concentration; and he/she may require the permittee to submit a permit application for the increased emissions.

- (6) The permittee shall collect, record, and retain the following information for each toxic evaluation conducted to determine compliance with the AToxic Air Contaminant Statute², ORC 3704.03(F):
 - a. a description of the parameters/values used in each compliance demonstration and the parameters or values changed for any re-evaluation of the toxic(s) modeled (the composition of materials, new toxic contaminants emitted, change in stack/exhaust parameters, etc.);
 - b. the Maximum Acceptable Ground-Level Concentration (MAGLC) for each significant toxic contaminant or worst-case contaminant, calculated in accordance with the AToxic Air Contaminant Statute², ORC 3704.03(F);
 - c. a copy of the computer model run(s), that established the predicted 1-hour maximum ground-level concentration that demonstrated the emissions unit(s) to be in compliance with the AToxic Air Contaminant Statute², ORC 3704.03(F), initially and for each change that requires re-evaluation of the toxic air contaminant emissions; and
 - d. the documentation of the initial evaluation of compliance with the AToxic Air Contaminant Statute², ORC 3704.03(F), and documentation of any determination that was conducted to re-evaluate compliance due to a change made to the emissions unit(s) or the materials applied.
 - (7) The permittee shall maintain a record of any change made to a parameter or value used in the dispersion model, used to demonstrate compliance with the AToxic Air Contaminant Statute², ORC 3704.03(F), through the predicted 1-hour maximum ground-level concentration. The record shall include the date and reason(s) for the change and if the change would increase the ground-level concentration.
- e) Reporting Requirements
- (1) Annual Permit Evaluation Report (PER) forms will be mailed to the permittee at the end of the reporting period specified in the Authorization section of this permit. The permittee shall submit the PER in the form and manner provided by the director by the due date identified in the Authorization section of this permit. The permit evaluation report shall cover a reporting period of no more than twelve-months for each air contaminant source identified in this permit.
 - (2) The permittee shall notify the Ohio EPA, Central District Office in writing of any daily record showing that the dry filtration system was not in service when the emissions unit was in operation. Identification of such incidents within the PER shall constitute compliance with this term.
 - (3) The permittee shall submit annual reports to the appropriate Ohio EPA District Office or local air agency, documenting any changes made to a parameter or value used in the dispersion model, that was used to demonstrate compliance with the AToxic Air Contaminant Statute², ORC 3704.03(F), through the predicted 1-hour maximum ground-level concentration. If no changes to the emissions unit(s) or the exhaust stack have been made, then the report shall include a statement to this effect. Identification of such changes within the PER shall constitute compliance with this term.

- (4) The permittee shall submit quarterly deviation (excursion) reports that identify:
 - a. all deviations (excursions) of the following emission limitations, operational restrictions and/or control device operating parameter limitations that restrict the Potential to Emit (PTE) of any regulated air pollutant and have been detected by the monitoring, record keeping and/or testing requirements in this permit:
 - i. The combined total VOC emissions shall not exceed 68.3 tons per rolling 12-month period for all coatings and cleanup materials used in units R005, R006, R007, R008, R009 and R010.
 - ii. The combined total hazardous air pollutants (HAP) emissions shall not exceed 9.9 tons per rolling 12-month period for all single HAP and 24.9 tons per rolling 12-month period for all HAP from all coatings and cleanup materials used in units R005, R006, R007, R008, R009 and R010.
 - iii. The maximum annual coating usage for emissions units R005, R006, R007, R008, R009 and R010 shall not exceed 23,400 gallons, based upon a rolling, 12-month summation of the coating usage figures.
 - iv. Coating content may not exceed 5.69 pounds VOC per gallon. Cleanup content may not exceed 7.50 pounds VOC per gallon.
 - v. The maximum annual clean up usage for emissions units R005, R006, R007, R008, R009 and R010 shall not exceed 460 gallons, based upon a rolling, 12-month summation of the coating usage figures.
 - b. the probable cause of each deviation (excursion);
 - c. any corrective actions that were taken to remedy the deviations (excursions) or prevent future deviations (excursions); and
 - d. the magnitude and duration of each deviation (excursion).

If no deviations (excursions) occurred during a calendar quarter, the permittee shall submit a report that states that no deviations (excursions) occurred during the quarter.

- (5) The quarterly reports shall be submitted (postmarked) each year by the thirty-first of January (covering October to December), the thirtieth of April (covering January to March), the thirty-first of July (covering April to June), and the thirty-first of October (covering July to September), unless an alternative schedule has been established and approved by the director (the appropriate district office or local air agency).

f) Testing Requirements

- (1) Compliance with the emission limitations of these terms and conditions shall be determined in accordance with the following methods:
 - a. Emission Limitation:
VOC emissions shall not exceed 17.1 lbs/hr.

Applicable Compliance Method:

To determine the actual worst case particulate emissions rate, the following equation may be used:

$$E = A * V$$

where;

$$E = \text{VOC emissions rate (lbs/hr)}$$

$$A = \text{maximum spray gun application rate (3 gallons per hour)}$$

$$V = \text{maximum VOC content (5.69 lb VOC per gallon)}$$

If required, USEPA Method 24 shall be used to determine the VOC contents for the coatings. If an owner or operator determines that Method 24, 40 CFR Part 60, Appendix A, cannot be used for a particular coating, the permittee shall so notify the Ohio EPA, Central District Office and shall use formulation data for that coating to demonstrate compliance until the USEPA provides alternative analytical procedures or alternative precision statements for Method 24.

b. Emission Limitation:

The combined total VOC emissions shall not exceed 68.3 tons per rolling 12-month period for all coatings and cleanup materials used in units R005, R006, R007, R008, R009 and R010.

Applicable Compliance Method:

Compliance shall be based upon the summation of the daily VOC emissions per the record keeping requirements specified in d)(2) of this permit.

c. Emission Limitation:

The individual HAP emissions shall not exceed 9.9 tons per rolling 12-month period for all single HAP from all coatings and cleanup materials used in units R005, R006, R007, R008, R009 and R010.

Applicable Compliance Method:

Compliance shall be based upon the record keeping requirements specified in d)(2) of this permit.

d. Emission Limitation:

The combined total HAP emissions shall not exceed 24.9 tons per rolling 12-month period for all HAP from all coatings and cleanup materials used in units R005, R006, R007, R008, R009 and R010.

Applicable Compliance Method:

Compliance shall be based upon the record keeping requirements specified in d)(2) of this permit.

e. Emission Limitation:

PE shall not exceed 0.2 lb/hr.

Applicable Compliance Method:

To determine the actual worst case particulate emissions rate, the following equation may be used:

$$E = \frac{\text{(maximum coating solids usage rate in pounds per hour)} (1-TE)}{(1-CE)}$$

$$E = \text{particulate emissions rate (lbs/hr)}$$

TE = transfer efficiency, which is the ratio of the amount of coating solids deposited on the coated part to the amount of coating solids used (75% for the automated adhesive coating line)

CE = fractional control efficiency of the control equipment (87.5% for dry filtration system)

If required, the permittee shall demonstrate compliance with this emission limitation through emissions tests performed in accordance with 40 CFR, Part 60, Appendix A, Methods 1 through 5, and the procedures specified in OAC rule 3745-17-03(B)(10).

f. Emission Limitation:

PE emissions shall not exceed 0.9 ton/year.

Applicable Compliance Method:

The annual emission limitation was established by multiplying the hourly limitation by 8,760 hours/year and then dividing by 2,000 pounds/ton. Compliance with the annual emission limitation may be assumed as long as compliance with the hourly emission limitation is maintained.

g. Emission Limitation:

Visible PE from any stack shall not exceed 20% opacity, as a six-minute average, except as provided by rule.

Applicable Compliance Method:

If required, compliance shall be determined through visible emissions observations performed in accordance with 40 CFR Part 60, Appendix A, Method 9 and the procedures specified in OAC rule 3745-17-03(B)(1).

State of Ohio Environmental Protection Agency
Division of Air Pollution Control

Draft Permit-to-Install and Operate

Permit Number: P0104975

Facility ID: 0149010100

Effective Date: To be entered upon final issuance

- h. USEPA Method 24 shall be used to determine the VOC contents for the coatings and cleanup materials. If an owner or operator determines that Method 24, 40 CFR Part 60, Appendix A cannot be used for a particular coating or cleanup material, the permittee shall so notify the Administrator of the USEPA and shall use formulation data for that coating to demonstrate compliance until the USEPA provides alternative analytical procedures or alternative precision statements for Method 24.
- g) Miscellaneous Requirements
 - (1) None.
