Dear Permit Holder:

Enclosed please find a final Air Pollution Permit-to-Install and Operate (PTIO) which will allow you to install, modify, and/or operate the described emissions unit(s) in the manner indicated in the permit. Because this permit contains conditions and restrictions, please read it very carefully. Please complete a survey at [www.epa.ohio.gov/dapc/permitsurvey.aspx](http://www.epa.ohio.gov/dapc/permitsurvey.aspx) and give us feedback on your permitting experience. We value your opinion.

The issuance of this PTI is a final action of the Director and may be appealed to the Environmental Review Appeals Commission pursuant to Section 3745.04 of the Ohio Revised Code. The appeal must be in writing and set forth the action complained of and the grounds upon which the appeal is based. The appeal must be filed with the Commission within thirty (30) days after notice of the Director's action. The appeal must be accompanied by a filing fee of \$70.00, made payable to "Ohio Treasurer Josh Mandel," which the Commission, in its discretion, may reduce if by affidavit you demonstrate that payment of the full amount of the fee would cause extreme hardship. Notice of the filing of the appeal shall be filed with the Director within three (3) days of filing with the Commission. Ohio EPA requests that a copy of the appeal be served upon the Ohio Attorney General's Office, Environmental Enforcement Section. An appeal may be filed with the Environmental Review Appeals Commission at the following address:

Environmental Review Appeals Commission  
309 South Fourth Street, Room 222  
Columbus, OH 43215

If you have any questions, please contact Canton City Health Department at (330)489-3385 or the Office of Compliance Assistance and Pollution Prevention at (614) 644-3469. This permit can be accessed electronically on the DAPCWeb page, [www.epa.ohio.gov/dapc](http://www.epa.ohio.gov/dapc), by clicking the "Issued Air Pollution Control Permits" link.

Sincerely,

Michael W. Ahern, Manager  
Permit Issuance and Data Management Section, DAPC

## Authorization

Facility ID: 1576050275  
Application Number(s): M0001064  
Permit Number: P0107284  
Permit Description: Administrative Modification to Permit 15-01609 to correct a throughput limit of 9 million gallons which was incorrectly included in permit. This limit should match the throughput amount of approximately 77 million gallons, which was the value used to generate the current 1.45 tons VOC emission limit.  
Permit Type: Administrative Modification  
Permit Fee: \$0.00  
Issue Date: 7/26/2012  
Effective Date: 7/26/2012  
Expiration Date: 1/8/2014  
Permit Evaluation Report (PER) Annual Date: Oct 1 - Sept 30, Due Nov 15

This document constitutes issuance to:

Buckeye Terminals, LLC - CANTON TERMINAL  
807 HARTFORD AVE  
Canton, OH 44707

of a Permit-to-Install and Operate for the emissions unit(s) identified on the following page.

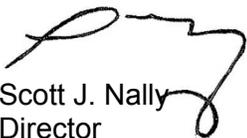

Ohio EPA District Office or local air agency responsible for processing and administering your permit:

Canton City Health Department  
420 Market Avenue  
Canton, OH 44702-1544  
(330)489-3385

The above named entity is hereby granted this Permit-to-Install and Operate for the air contaminant source(s) (emissions unit(s)) listed in this section pursuant to Chapter 3745-31 of the Ohio Administrative Code. Issuance of this permit does not constitute expressed or implied approval or agreement that, if constructed or modified in accordance with the plans included in the application, the described emissions unit(s) will operate in compliance with applicable State and federal laws and regulations.

This permit is granted subject to the conditions attached hereto.

Ohio Environmental Protection Agency

Scott J. Nally  
Director

## **Authorization (continued)**

Permit Number: P0107284

Permit Description: Administrative Modification to Permit 15-01609 to correct a throughput limit of 9 million gallons which was incorrectly included in permit. This limit should match the throughput amount of approximately 77 million gallons, which was the value used to generate the current 1.45 tons VOC emission limit.

Permits for the following Emissions Unit(s) or groups of Emissions Units are in this document as indicated below:

<b>Emissions Unit ID:</b>	<b>T025</b>
Company Equipment ID:	Tank #37
Superseded Permit Number:	15-01609
General Permit Category and Type:	Not Applicable

## **A. Standard Terms and Conditions**

**1. What does this permit-to-install and operate ("PTIO") allow me to do?**

This permit allows you to install and operate the emissions unit(s) identified in this PTIO. You must install and operate the unit(s) in accordance with the application you submitted and all the terms and conditions contained in this PTIO, including emission limits and those terms that ensure compliance with the emission limits (for example, operating, recordkeeping and monitoring requirements).

**2. Who is responsible for complying with this permit?**

The person identified on the "Authorization" page, above, is responsible for complying with this permit until the permit is revoked, terminated, or transferred. "Person" means a person, firm, corporation, association, or partnership. The words "you," "your," or "permittee" refer to the "person" identified on the "Authorization" page above.

The permit applies only to the emissions unit(s) identified in the permit. If you install or modify any other equipment that requires an air permit, you must apply for an additional PTIO(s) for these sources.

**3. What records must I keep under this permit?**

You must keep all records required by this permit, including monitoring data, test results, strip-chart recordings, calibration data, maintenance records, and any other record required by this permit for five years from the date the record was created. You can keep these records electronically, provided they can be made available to Ohio EPA during an inspection at the facility. Failure to make requested records available to Ohio EPA upon request is a violation of this permit requirement.

**4. What are my permit fees and when do I pay them?**

There are two fees associated with permitted air contaminant sources in Ohio:

PTIO fee. This one-time fee is based on a fee schedule in accordance with Ohio Revised Code (ORC) section 3745.11, or based on a time and materials charge for permit application review and permit processing if required by the Director.

You will be sent an invoice for this fee after you receive this PTIO and payment is due within 30 days of the invoice date. You are required to pay the fee for this PTIO even if you do not install or modify your operations as authorized by this permit.

Annual emissions fee. Ohio EPA will assess a separate fee based on the total annual emissions from your facility. You self-report your emissions in accordance with Ohio Administrative Code (OAC) Chapter 3745-78. This fee assessed is based on a fee schedule in ORC section 3745.11 and funds Ohio EPA's permit compliance oversight activities. Unless otherwise specified, facilities subject to one or more synthetic minor restrictions must use Ohio EPA's "Air Services" to submit annual emissions associated with this permit requirement. Ohio EPA will notify you when it is time to report your emissions and to pay your annual emission fees.

**5. When does my PTIO expire, and when do I need to submit my renewal application?**

This permit expires on the date identified at the beginning of this permit document (see "Authorization" page above) and you must submit a renewal application to renew the permit. Ohio EPA will send a renewal notice to you approximately six months prior to the expiration date of this permit. However, it is

very important that you submit a complete renewal permit application (postmarked prior to expiration of this permit) even if you do not receive the renewal notice.

If a complete renewal application is submitted before the expiration date, Ohio EPA considers this a timely application for purposes of ORC section 119.06, and you are authorized to continue operating the emissions unit(s) covered by this permit beyond the expiration date of this permit until final action is taken by Ohio EPA on the renewal application.

**6. What happens to this permit if my project is delayed or I do not install or modify my source?**

This PTIO expires 18 months after the issue date identified on the "Authorization" page above unless otherwise specified if you have not (1) started constructing the new or modified emission sources identified in this permit, or (2) entered into a binding contract to undertake such construction. This deadline can be extended by up to 12 months, provided you apply to Ohio EPA for this extension within a reasonable time before the 18-month period has ended and you can show good cause for any such extension.

**7. What reports must I submit under this permit?**

An annual permit evaluation report (PER) is required in addition to any malfunction reporting required by OAC rule 3745-15-06 or other specific rule-based reporting requirement identified in this permit. Your PER due date is identified in the Authorization section of this permit.

**8. If I am required to obtain a Title V operating permit in the future, what happens to the operating provisions and PER obligations under this permit?**

If you are required to obtain a Title V permit under OAC Chapter 3745-77 in the future, the permit-to-operate portion of this permit will be superseded by the issued Title V permit. From the effective date of the Title V permit forward, this PTIO will effectively become a PTI (permit-to-install) in accordance with OAC rule 3745-31-02(B). The following terms and conditions will no longer be applicable after issuance of the Title V permit: Section B, Term 1.b) and Section C, for each emissions unit, Term a)(2).

The PER requirements in this permit remain effective until the date the Title V permit is issued and is effective, and cease to apply after the effective date of the Title V permit. The final PER obligation will cover operations up to the effective date of the Title V permit and must be submitted on or before the submission deadline identified in this permit on the last day prior to the effective date of the Title V permit.

**9. What are my obligations when I perform scheduled maintenance on air pollution control equipment?**

You must perform scheduled maintenance of air pollution control equipment in accordance with OAC rule 3745-15-06(A). If scheduled maintenance requires shutting down or bypassing any air pollution control equipment, you must also shut down the emissions unit(s) served by the air pollution control equipment during maintenance, unless the conditions of OAC rule 3745-15-06(A)(3) are met. Any emissions that exceed permitted amount(s) under this permit (unless specifically exempted by rule) must be reported as deviations in the annual permit evaluation report (PER), including nonexempt excess emissions that occur during approved scheduled maintenance.

**10. Do I have to report malfunctions of emissions units or air pollution control equipment? If so, how must I report?**

If you have a reportable malfunction of any emissions unit(s) or any associated air pollution control system, you must report this to the Canton City Health Department in accordance with OAC rule 3745-15-06(B). Malfunctions that must be reported are those that result in emissions that exceed permitted emission levels. It is your responsibility to evaluate control equipment breakdowns and operational upsets to determine if a reportable malfunction has occurred.

If you have a malfunction, but determine that it is not a reportable malfunction under OAC rule 3745-15-06(B), it is recommended that you maintain records associated with control equipment breakdown or process upsets. Although it is not a requirement of this permit, Ohio EPA recommends that you maintain records for non-reportable malfunctions.

**11. Can Ohio EPA or my local air agency inspect the facility where the emission unit(s) is/are located?**

Yes. Under Ohio law, the Director or his authorized representative may inspect the facility, conduct tests, examine records or reports to determine compliance with air pollution laws and regulations and the terms and conditions of this permit. You must provide, within a reasonable time, any information Ohio EPA requests either verbally or in writing.

**12. What happens if one or more emissions units operated under this permit is/are shut down permanently?**

Ohio EPA can terminate the permit terms associated with any permanently shut down emissions unit. "Shut down" means the emissions unit has been physically removed from service or has been altered in such a way that it can no longer operate without a subsequent "modification" or "installation" as defined in OAC Chapter 3745-31.

You should notify Ohio EPA of any emissions unit that is permanently shut down by submitting<sup>1</sup> a certification that identifies the date on which the emissions unit was permanently shut down. The certification must be submitted by an authorized official from the facility. You cannot continue to operate an emissions unit once the certification has been submitted to Ohio EPA by the authorized official.

You must comply with all recordkeeping and reporting for any permanently shut down emissions unit in accordance with the provisions of the permit, regulations or laws that were enforceable during the period of operation, such as the requirement to submit a PER, air fee emission report, or malfunction report. You must also keep all records relating to any permanently shutdown emissions unit, generated while the emissions unit was in operation, for at least five years from the date the record was generated.

Again, you cannot resume operation of any emissions unit certified by the authorized official as being permanently shut down without first applying for and obtaining a permit pursuant to OAC Chapter 3745-31.

---

<sup>1</sup>Permittees that use Ohio EPA's "Air Services" can mark the affected emissions unit(s) as "permanently shutdown" in the facility profile along with the date the emissions unit(s) was permanently removed and/or disabled. Submitting the facility profile update will constitute notifying of the permanent shutdown of the affected emissions unit(s).

**13. Can I transfer this permit to a new owner or operator?**

You can transfer this permit to a new owner or operator. If you transfer the permit, you must follow the procedures in OAC Chapter 3745-31, including notifying Ohio EPA or the local air agency of the change in ownership or operator. Any transferee of this permit must assume the responsibilities of the transferor permit holder.

**14. Does compliance with this permit constitute compliance with OAC rule 3745-15-07, "air pollution nuisance"?**

This permit and OAC rule 3745-15-07 prohibit operation of the air contaminant source(s) regulated under this permit in a manner that causes a nuisance. Ohio EPA can require additional controls or modification of the requirements of this permit through enforcement orders or judicial enforcement action if, upon investigation, Ohio EPA determines existing operations are causing a nuisance.

**15. What happens if a portion of this permit is determined to be invalid?**

If a portion of this permit is determined to be invalid, the remainder of the terms and conditions remain valid and enforceable. The exception is where the enforceability of terms and conditions are dependent on the term or condition that was declared invalid.

## **B. Facility-Wide Terms and Conditions**

1. This permit document constitutes a permit-to-install issued in accordance with ORC 3704.03(F) and a permit-to-operate issued in accordance with ORC 3704.03(G).
  - a) For the purpose of a permit-to-install document, the facility-wide terms and conditions identified below are federally enforceable with the exception of those listed below which are enforceable under state law only.
    - (1) None.
  - b) For the purpose of a permit-to-operate document, the facility-wide terms and conditions identified below are enforceable under state law only with the exception of those listed below which are federally enforceable.
    - (1) None.

## **C. Emissions Unit Terms and Conditions**

1. T025, Tank #37

Operations, Property and/or Equipment Description:

15,000 bbl (630,000 gallon), vertical, aboveground, liquid petroleum or ethanol storage tank, with internal floating roof, primary mechanical shoe seal, secondary shield and submerged fill. Company ID: Tank #37

a) This permit document constitutes a permit-to-install issued in accordance with ORC 3704.03(F) and a permit-to-operate issued in accordance with ORC 3704.03(G).

(1) For the purpose of a permit-to-install document, the emissions unit terms and conditions identified below are federally enforceable with the exception of those listed below which are enforceable under state law only.

a. None.

(2) For the purpose of a permit-to-operate document, the emissions unit terms and conditions identified below are enforceable under state law only with the exception of those listed below which are federally enforceable.

a. None.

b) Applicable Emissions Limitations and/or Control Requirements

(1) The specific operation(s), property, and/or equipment that constitute each emissions unit along with the applicable rules and/or requirements and with the applicable emissions limitations and/or control measures are identified below. Emissions from each unit shall not exceed the listed limitations, and the listed control measures shall be specified in narrative form following the table.

	Applicable Rules/Requirements	Applicable Emissions Limitations/Control Measures
a.	OAC rule 3745-31-05(A)(3) [Best Available Technology (BAT)]	1.45 tons of volatile organic compounds (VOC) per year See b)(2)a.
b.	40 CFR Part 60, Subpart Kb (40 CFR 60.110b – 117b) See b)(2)b.	See b)(2)c., and sections c) through f).
c.	40 CFR Part 60, Subpart A (40 CFR 60.1-19)	General Provisions. See e)(2) and e)(3).
d.	OAC Rule 3745-21-09(L)	The requirements of this rule are less stringent than those specified in 40 CFR Part 60, Subpart Kb.

- (2) Additional Terms and Conditions
- a. Best Available Technology (BAT) for this emissions unit has been determined to be compliance with terms b)(2)c., b)(2)d., c)(1), and c)(2) below, and compliance with the applicable requirements of 40 CFR Part 60, Subpart Kb contained in this permit.
  - b. In accordance with 40 CFR 60.112b(a)(1), this emission unit is a storage vessel, for which construction commenced after July 23, 1984, with a capacity greater than 151 m<sup>3</sup>, containing a volatile organic liquid (VOL) that, as stored, has a maximum true vapor pressure greater than or equal to 5.2 kPa but less than 76.6 kPa.
  - c. The permittee shall comply with the applicable storage vessel standards required under 40 CFR Part 60, Subpart Kb, including the following sections:
    - i. Each storage vessel shall be equipped with a fixed roof in combination with an internal floating roof. The internal floating roof shall rest or float on the liquid surface (but not necessarily in complete contact with it) inside a storage vessel that has a fixed roof. The internal floating roof shall be floating on the liquid surface at all times, except during initial fill and during those intervals when the storage vessel is completely emptied or subsequently emptied and refilled. When the roof is resting on the leg supports, the process of filling, emptying, or refilling shall be continuous and shall be accomplished as rapidly as possible. [40 CFR 60.112b(a)(1)(i)]
    - ii. The internal floating roof shall be equipped with a mechanical shoe seal closure device between the wall of the storage vessel and the edge of the internal floating roof. A mechanical shoe seal is a metal sheet held vertically against the wall of the storage vessel by springs or weighted levers and is connected by braces to the floating roof. A flexible coated fabric (envelope) spans the annular space between the metal sheet and the floating roof.[40 CFR 60.112b(a)(1)(ii)(C)]
    - iii. Each opening in the noncontact internal floating roof, except for automatic bleeder vents (vacuum breaker vents) and the rim space vents, shall provide a projection below the liquid surface.[40 CFR 60.112b(a)(1)(iii)]
    - iv. Each opening in the internal floating roof except for leg sleeves, automatic bleeder vents, rim space vents, column wells, ladder wells, sample wells, and stub drains shall be equipped with a cover or lid which is to be maintained in a closed position at all times (i.e., no visible gap) except when the device is in actual use. The cover or lid shall be equipped with a gasket. Covers on each access hatch and automatic gauge float well shall be bolted except when they are in use.[40 CFR 60.112b(a)(1)(iv)]

- v. Automatic bleeder vents shall be equipped with a gasket and are to be closed at all times when the roof is floating except when the roof is being floated off or is being landed on the roof leg supports.[40 CFR 60.112b(a)(1)(v)]
  - vi. Rim space vents shall be equipped with a gasket and are to be set to open only when the internal floating roof is not floating or at the manufacturer's recommended setting.[40 CFR 60.112b(a)(1)(vi)]
  - vii. Each penetration of the internal floating roof for the purpose of sampling shall be a sample well. The sample well shall have a slit fabric cover that covers at least 90 percent of the opening.[40 CFR 60.112b(a)(1)(vii)]
  - viii. Each penetration of the internal floating roof that allows for passage of a column supporting the fixed roof shall have a flexible fabric sleeve seal or a gasketed sliding cover.[40 CFR 60.112b(a)(1)(viii)]
  - ix. Each penetration of the internal floating roof that allows for passage of a ladder shall have a gasketed sliding cover.[40 CFR 60.112b(a)(1)(ix)]
- d. The permittee shall employ a submerged fill line during tank loading operations.
- c) Operational Restrictions
- (1) Only ethanol or liquid petroleum with a maximum true vapor pressure less than 76.6 kPa shall be stored in this emissions unit.
  - (2) The annual throughput of ethanol or liquid petroleum for this storage vessel shall not exceed 77,457,000 gallons.
- d) Monitoring and/or Recordkeeping Requirements
- (1) The permittee shall comply with the applicable monitoring and recordkeeping requirements under 40 CFR Part 60, Subpart Kb, including the following sections:
    - a. Visually inspect the internal floating roof, the primary seal, and the secondary seal (if one is in service), prior to filling the storage vessel with ethanol or liquid petroleum. If there are holes, tears, or other openings in the primary seal, the secondary seal, or the seal fabric or defects in the internal floating roof, or both, the owner or operator shall repair the items before filling the storage vessel.[40 CFR 60.113b(a)(1)]
    - b. For vessels equipped with a liquid-mounted or mechanical shoe primary seal, visually inspect the internal floating roof and the primary seal or the secondary seal (if one is in service) through manholes and roof hatches on the fixed roof at least once every 12 months after initial fill. If the internal floating roof is not resting on the surface of the ethanol or liquid petroleum inside the storage vessel, or there is liquid accumulated on the roof, or the seal is detached, or there are holes or tears in the seal fabric, the permittee shall repair the items or empty and remove the storage vessel from service within 45 days. If a failure

that is detected during inspections required in this paragraph cannot be repaired within 45 days and if the vessel cannot be emptied within 45 days, a 30-day extension may be requested from the Canton City Health Department, Air Pollution Control Division in the inspection report required in §60.115b(a)(3). Such a request for an extension must document that alternate storage capacity is unavailable and specify a schedule of actions the company will take that will assure that the control equipment will be repaired or the vessel will be emptied as soon as possible.[40 CFR 60.113b(a)(2)]

- c. Visually inspect the internal floating roof, the primary seal, the secondary seal (if one is in service), gaskets, slotted membranes and sleeve seals (if any) each time the storage vessel is emptied and degassed. If the internal floating roof has defects, the primary seal has holes, tears, or other openings in the seal or the seal fabric, or the secondary seal has holes, tears, or other openings in the seal or the seal fabric, or the gaskets no longer close off the liquid surfaces from the atmosphere, or the slotted membrane has more than 10 percent open area, the owner or operator shall repair the items as necessary so that none of the conditions specified in this paragraph exist before refilling the storage vessel with ethanol or liquid petroleum. In no event shall inspections conducted in accordance with this provision occur at intervals greater than 10 years. [40 CFR 60.113b(a)(4)]
- d. The permittee shall keep a record of each inspection performed. Each record shall identify the storage vessel on which the inspection was performed and shall contain the date the vessel was inspected and the observed condition of each component of the control equipment (seals, internal floating roof, and fittings). [40 CFR 60.115b(a)(2)]
- e. The permittee shall maintain a record of the ethanol or liquid petroleum stored, the period of storage, and the maximum true vapor pressure of that ethanol or liquid petroleum during the respective storage period. [40 CFR 60.116b(c)]
- f. Available data on the storage temperature may be used to determine the maximum true vapor pressure as specified below[40 CFR 60.116b(e)]:
  - i. For vessels operated above or below ambient temperatures, the maximum true vapor pressure is calculated based upon the highest expected calendar-month average of the storage temperature. For vessels operated at ambient temperatures, the maximum true vapor pressure is calculated based upon the maximum local monthly average ambient temperature as reported by the National Weather Service.
  - ii. For crude oil or refined petroleum products the vapor pressure may be obtained by the following:
    - (a) Available data on the Reid vapor pressure and the maximum expected storage temperature based on the highest expected calendar-month average temperature of the stored product may be used to determine the maximum true vapor pressure from nomographs contained in API Bulletin 2517 (incorporated by

reference----see §§60.17), unless the Administrator specifically requests that the liquid be sampled, the actual storage temperature determined, and the Reid vapor pressure determined from the sample(s).

- (b) The true vapor pressure of each type of crude oil with a Reid vapor pressure less than 13.8 kPa or with physical properties that preclude determination by the recommended method is to be determined from available data and recorded if the estimated maximum true vapor pressure is greater than 3.5 kPa.
    - iii. For other liquids, the vapor pressure:
      - (a) May be obtained from standard reference texts, or
      - (b) Determined by ASTM D2879—83, 96, or 97 (incorporated by reference----see §§60.17); or
      - (c) Measured by an appropriate method approved by the Administrator; or
      - (d) Calculated by an appropriate method approved by the Administrator.
  - g. The permittee shall retain all records for at least 2 years. Records shall be maintained in a manner that they can be readily accessed within 24 hours. Records may be maintained in a hard copy format or in a computer-readable format. Records showing the dimensions of the storage vessel and an analysis showing the capacity of the storage vessel shall be kept for the life of the source.
  - (2) The permittee shall maintain records of the actual annual throughput in gallons per year.
  - (3) The permittee shall calculate and maintain records of the annual VOC emissions from this emissions unit. The actual annual throughput recorded for any calendar year shall be the basis for calculating the annual emissions of VOC by using the emissions estimation methodologies provided in the most current version of AP-42, Section 7.1 "Liquid Storage Tanks" or the most recent version of USEPA's TANKS computer program.
- e) Reporting Requirements
- (1) The permittee shall submit an annual Permit Evaluation Report (PER) to the Canton City Health Department, Air Pollution Control Division, by the due date identified in the Authorization section of this permit. The permit evaluation report shall cover a reporting period of no more than twelve-months for each air contaminant source identified in this permit. It is recommended that the PER is submitted electronically through the Ohio EPA's "e-Business Center: Air Services". [OAC rule 3745-15-03(B)(2)] and [OAC rule 3745-15-03(D)]

- (2) The permittee shall submit a notification to the Canton City Health Department, Air Pollution Control Division, of the date construction is commenced no later than 30 days after such date. [40 CFR 60.7(a)(1)]
- (3) The permittee shall submit a notification to the Canton City Health Department, Air Pollution Control Division, of the actual date of initial startup of the facility postmarked within 15 days after such date. [40 CFR 60.7(a)(3)]
- (4) The permittee shall submit a report to the Canton City Health Department, Air Pollution Control Division, that describes the control equipment and certifies that the control equipment meets the specifications of §60.112b(a)(1) and §60.113b(a)(1), contained in terms b)(2)c. and d)(1)a. This report shall be an attachment to the notification required by §60.7(a)(3). [40 CFR 60.115b(a)(1)]
- (5) The permittee shall notify the Canton City Health Department, Air Pollution Control Division, in writing at least 30 days prior to the filling or refilling the storage vessel for which an inspection is required by §60.113b(a)(1) and (4), contained in terms d)(1)a. & d)(1)c., to afford the Canton City Health Department, Air Pollution Control Division, the opportunity to have an observer present. If the inspection is not planned and the permittee could not have known about the inspection 30 days in advance of refilling the tank, the permittee shall notify the Canton City Health Department, Air Pollution Control Division, at least 7 days prior to the refilling of the storage vessel. Notification shall be made by telephone immediately followed by written documentation demonstrating why the inspection was unplanned. Alternatively, this notification including the written documentation may be made in writing and sent by express mail so that it is received by the Canton City Health Department, Air Pollution Control Division, at least 7 days prior to the refilling. [40 CFR 60.113b(a)(5)]
- (6) If any of the conditions described in §60.113b(a)(2), contained in term d)(b) above, are detected during the annual visual inspection, a report shall be submitted to the Canton City Health Department, Air Pollution Control Division, within 30 days of the inspection. Each report shall identify the storage vessel, the nature of the defects, and the nature of and date the repair was made. [40 CFR 60.115b(a)(3)]
- (7) If no defects are detected during the annual visual inspection, a “no defects” report shall be submitted to the Canton City Health Department, Air Pollution Control Division. The report shall document that the inspection was conducted in accordance with §60.113b. The report shall be provided within the “Additional Information and Corrections” section of the PER and submitted as part of the PER required by term e)(1) above.
- (8) The permittee shall submit annual reports to the Canton City Health Department, Air Pollution Control Division, that specify the total VOC emissions from this emissions unit for the previous calendar year. These reports shall be submitted by April 15 of each year and can be included as part of the annual Fee Emission Report. Should the annual total VOC emissions exceed 1.45 tpy, the permittee shall also submit the actual annual throughput of ethanol or liquid petroleum, and the calculations required by terms d)(2) and d)(3) above.

f) Testing Requirements

(1) Compliance with the emissions limitations of this permit shall be determined in accordance with the following methods:

a. Control Measure: The permittee shall utilize an internal floating roof equipped with seals as defined in 40 CFR Part 60.112b(a)(1)(ii) to control the emissions of VOC.

Applicable Compliance Method: Compliance shall be demonstrated based upon the monitoring and record keeping requirement specified in section d) above.

b. Emissions Limitation: 1.45 tons VOC per year

Applicable Compliance Method:

The annual emission limitation was established by setting it equal to the maximum potential to emit (PTE) from this emission unit as provided in the permit application. The PTE was calculated by using the USEPA's TANKS program version 4.09 with the input value of the maximum material throughput contained in c)(2) above.

Compliance shall be demonstrated based upon the monitoring and record keeping requirement specified in terms d)(2) and d)(3) above.

g) Miscellaneous Requirements

(1) None.
