

February 5, 2008

Jeff Reynolds  
Ohio EPA, Division of Surface Water  
Standards & Technical Support Section  
50 West Town Street, Suite 700  
P.O. Box 1049  
Columbus, Ohio 43216-1049

Dear Mr. Reynolds:

Please find enclosed the Level 3 Project Study Plan titled "2008 Benthic Macroinvertebrate Sampling Upstream of NEORSO CSO Areas". If you have any questions regarding the content of this study plan, please do not hesitate to contact me. I can be reached by email at [rhoadesj@neorsd.org](mailto:rhoadesj@neorsd.org) or phone (216) 641-6000 ext. 2219.

Sincerely,

A handwritten signature in black ink, appearing to read "John W. Rhoades", is positioned above the typed name.

John W. Rhoades  
Supervisor of Environmental Assessment  
Northeast Ohio Regional Sewer District

### Level 3 Project Study Plan

#### *2008 Benthic Macroinvertebrate Sampling Upstream of NEORSD CSO Areas*

(1) Objective

The objective of this study is to conduct benthic macroinvertebrate and water quality sampling upstream from areas of Northeast Ohio Regional Sewer District (NEORSD)-owned combined sewer overflows (CSOs). The resulting upstream data will be compared with the benthic macroinvertebrate data obtained from these streams, downstream of the NEORSD CSO areas (required by Ohio EPA NPDES Permit No. 3PA00002\*FD) to determine the extent to which downstream macroinvertebrate communities may be impacted by CSOs or other environmental factors. This sampling will be conducted by the NEORSD's Water Quality and Industrial Surveillance department (WQIS) and will occur from June 15 through September 30, 2008, as required in the *OEPA Biological Criteria for the Protection of Aquatic Life Volume III* (1987, updated September 30, 1989 and November 8, 2006).

Sample sites for this study are located on Big Creek, Doan Brook, Euclid Creek and Mill Creek, all of which are surface waters within the NEORSD service area. Quantitative and qualitative benthic macroinvertebrate sampling will be conducted at each sample site. The benthic macroinvertebrate results will be compiled and used to calculate an Invertebrate Community Index (ICI) score for each site. Species assemblages and individual metrics will be analyzed. Water sampling data will be evaluated to determine the presence and/or absence of excursions from water quality criteria. An examination of the individual metrics that comprise the ICI will be used in conjunction with water quality data, the Ohio EPA Macroinvertebrate Field Sheet and Qualitative Habitat Evaluation Index (QHEI) results in order to identify impacts to the communities. Results will also be compared to historic data to show temporal as well as spatial trends.

In addition to the above sampling, NEORSD will attempt to conduct fish community sampling at each of the sample sites on Big Creek, Doan Brook, Euclid Creek and Mill Creek. This sampling will be dependent upon weather and stream conditions, as well as, availability of NEORSD personnel. If the sampling is conducted, fish community health will be evaluated through the use of Ohio EPA indices [Index of Biological Integrity (IBI) and the Modified-Index of Well-Being (MIwb), where applicable]. An examination of the individual metrics that comprise the IBI will be used in conjunction with water quality data and QHEI results in order to identify impacts to the fish community.

COPIED 11 MAR 29  
OHIO EPA - CSM

(2) Nonpoint/Point Sources

Point Sources	Nonpoint Sources
CSO(s) outside of NEORSD service area	Urban Runoff
Storm Sewer Outfalls	Landfill Leachate
Upstream tributaries	Spills
Home Sewage Treatment Systems	Agriculture
	Golf Course Runoff

A map has been provided in Appendix A to show point sources that may be influencing the water quality at each sample location. These sources of pollution, along with the nonpoint sources listed in the table above, may be impacting the health of the fish and benthic macroinvertebrate communities and will need to be taken into account when evaluating impacts resulting from NEORSD CSOs. Other factors that may influence ecological conditions during the study include periods of drought and periods of heavy precipitation.

(3) Parameters Covered

Macroinvertebrate quantitative and qualitative samples will be collected and shipped to EA Engineering, Science and Technology for identification and enumeration. If construction begins during the 2008 season on the West Creek Restoration Project, then Tiffany Moore of NEORSD and Marty Sneen of EA Engineering, Science and Technology, both Level 3 QDCs for Benthic Macroinvertebrate Biology, will identify the specimens to the lowest practical taxonomic level and whenever possible, to the level of taxonomy recommended in Ohio EPA's *Biological Criteria for the Protection of Aquatic Life, Volume III* (1987, updated September 30, 1989 and November 8, 2006).

The purpose of the study is not intended to determine full biological attainment of the designated use of each water body, but simply to determine the impacts that combined sewer overflows have on the macroinvertebrate community. This is consistent with Ohio EPA permit #3PA00002\*FD, which does not require the collection of fish where macroinvertebrates are collected. However, an effort will be made to conduct fish community sampling at each of the sample sites for informational purposes.

The Ohio EPA Macroinvertebrate Field Sheet will be completed at each site during the quantitative sampler retrieval. In addition, stream habitat will be measured by scoring components of the QHEI at all locations, including the substrate, instream cover, channel morphology, riparian zone and bank erosion, pool/glide and riffle/run quality and gradient.

Water chemistry sampling will be conducted at each sampling site. Sampling frequency is discussed below in section (6). Appendix B lists the parameters to be tested. Field measurements for dissolved oxygen, pH, temperature, specific conductance and stream velocity will also be performed. A water quality observation checklist will be completed at each site during each sample collection (Appendix B).

Fish specimens will be identified to species level, weighed (where applicable), counted and examined for the presence of external anomalies including DELTs (deformities, eroded fins, lesions and tumors).

(4) Field Collection and Data Assessment Techniques

Macroinvertebrate sampling will be conducted using quantitative and qualitative sampling techniques at the locations identified in section 5. Two rounds of quantitative sampling will include installation of a five Hester-Dendy multi-plate artificial substrate sampler assemblage (HD) that is colonized for a six-week period. Multiple HD samplers may be installed at one or all of the locations during each round of sampling in case samplers are lost due to vandalism, burial, etc. Furthermore, multiple qualitative samples may be collected during each sampling round, in case of HD sampler loss, in order to sample the macroinvertebrate community during normal flow conditions. Additionally, five Surber square-foot samples may be used in place of an HD sampler where deemed uncollectible due to the HD sampler having been vandalized, buried, etc. Surber samples, if supplemented for a HD sampler, will be used for informational purposes only, and will not be used to calculate an ICI score. Qualitative sampling will be conducted using a D-frame dip net when HD samplers are retrieved. The Ohio EPA Macroinvertebrate Field Sheet will be completed during each HD retrieval. Macroinvertebrate community assemblages will be collected and shipped to EA Engineering, Science and Technology for identification and enumeration. EA Engineering, Science and Technology will identify specimens to the lowest practical taxonomic level and when the condition of the specimen allows, to the level of taxonomy recommended in Ohio EPA's *Biological Criteria for the Protection of Aquatic Life, Volume III* (1987, updated September 30, 1989 and November 8, 2006). Voucher specimens will be collected as described in section (14). Stream flow will be measured with a Marsh-McBirney FloMate Model 2000 Portable Flow Meter when the HD samplers are installed and retrieved.

Contingent on weather and stream conditions, as well as availability of NEORSD personnel, field collections for fish will be attempted at as many of the locations as possible. The potential locations are listed in the tables in section 5. Sampling will be conducted using longline electrofishing techniques and will consist of

shocking all habitat types within a sampling zone, while moving from downstream to upstream. The sampling zone for headwater sites (Big Creek sites #28.1 and #26, Doan Brook sites #19.5, #18.1, and #16.1, and Mill Creek sites #34.6 and #31) will be 0.15 km long. The sampling zone for wading sites (Big Creek site #25 and Euclid Creek sites #1.65, #1.5, and #0.5) will be 0.2 km long. The stunned fish will be collected and placed into a live well for later identification.

If surveys are conducted, fish will be identified to species level, weighed (where applicable), counted, and examined for the presence of external anomalies including DELTs. Fish easily identified (those commonly collected by NEORS D from year to year) will be returned to the site from which they are collected. Subsamples of difficult to identify species will be brought back to the laboratory for verification by NEORS D personnel and, if necessary, sent to The Ohio State University College Museum of Biological Diversity for verification by the Curator and/or Associate Curator of Fish. Voucher specimens will be collected as described in section (14). Endangered species and those too large for preservation will not be collected as voucher specimens, but will instead be photographed. Photographed vouchers will include features that permit definitive identification of the particular species.

Fish will be preserved in 10 percent formalin in the field, soaked in tap water for 24 to 48 hours after 5 to 7 days, then transferred to solutions of 30 and 50 percent ethanol for 5 to 7 days each and, finally, to 70 percent ethanol for long-term storage. Specimens larger than six inches will be slit along the right side and then soaked in formalin for approximately 10 to 14 days before being transferred to water and solutions of 30, 50 and 70 percent ethanol. Label information will include location (description and coordinates), date, time, collectors' names and sample identification code for each specimen collected.

A detailed description of the sampling and analysis methods utilized in the macroinvertebrate and fish surveys, including calculations of the ICI, IBI, and MIwb can be found in Ohio EPA's *Biological Criteria for the Protection of Aquatic Life, Volumes II* (1987, updated January 1, 1988 and November 8, 2006) and *III* (1987, updated September 30, 1989 and November 8, 2006).

Water chemistry sampling and chemical analyses will follow the *Manual of Ohio EPA Surveillance Methods and Quality Assurance Practices* (2006). One 4-liter disposable polyethylene cubitainer with disposable polypropylene lid and two 473 mL plastic bottles will be used to collect a surface grab sample at each location. One duplicate sample and one field blank will be collected at a randomly selected site for each round of sampling. Acid preservation of the samples, as specified in the NEORS D laboratory's standard operating procedure for each parameter, will occur in the field. Appendix B lists the analytical method and detection limits for

Benthic Macroinvertebrate Sampling Upstream of NEORSO CSO Areas Study Plan  
February 5, 2008

each parameter analyzed. Field analyses include the use of a Marsh-McBirney FloMate Model 2000 Portable Flow Meter, which measures flow in feet per second, and a YSI-556 MPS Multi-Parameter Water Quality Meter to measure dissolved oxygen, water temperature, specific conductivity and pH at the time of sampling. Meter specifications have been included in Appendix B.

The QHEI, as described in Ohio EPA's, *Methods for Assessing Habitat in Flowing Waters: Using the Qualitative Habitat Evaluation Index (QHEI)* (2006) will be used to assess aquatic habitat conditions at each sample location.

(5) Sampling Locations

Site Location	Latitude	Longitude	River Mile	Description	Quadrangle	Purpose
Big Creek #26	N41.4460°	W81.7540°	4.40	Memphis MetroPark	Lakewood	Evaluate macroinvertebrates and habitat upstream of CSOs
Big Creek-Ford Branch #28.1	N41.4230°	W81.8019°	4.70	West 150 <sup>th</sup> Street	Lakewood	Evaluate macroinvertebrates and habitat upstream of CSOs
Doan Brook-North Branch #18.1	N41.4838°	W81.5643°	6.70	Upstream of Lee Road	Shaker Heights	Evaluate macroinvertebrates and habitat upstream of CSOs
Doan Brook-South Branch #19.5	N41.4739°	W81.5593°	1.40	US Attleboro Road	Shaker Heights	Evaluate macroinvertebrates and habitat upstream of CSOs
Euclid Creek #1.5	N41.5658°	W81.5358°	2.70	Upstream of Highland Road	East Cleveland	Evaluate macroinvertebrates and habitat upstream of CSOs
Euclid Creek #1.65	N41.5738°	W81.5470°	1.65	Upstream of St. Clair Avenue	East Cleveland	Evaluate macroinvertebrates and habitat upstream of CSOs
Mill Creek #34.6	N41.4305°	W81.5442°	8.30	Upstream of South Miles Road	Shaker Heights	Evaluate macroinvertebrates and habitat upstream of CSOs

Downstream of CSO Permit-Required Sampling Locations\*

Site Location	Latitude	Longitude	River Mile	Description	Quadrangle	Purpose
Big Creek #25	N41.4460°	W81.6865°	0.15	Downstream of Jennings Road	Cleveland South	Ohio EPA Permit No. 3PA00002*FD
Doan Brook #16.1	N41.5330°	W81.6296°	0.75	Downstream of St. Clair Avenue	Cleveland North	Ohio EPA Permit No. 3PA00002*FD
Euclid Creek #0.5	N41.5833°	W81.5594°	0.55	Downstream of Lakeshore Avenue	East Cleveland	Ohio EPA Permit No. 3PA00002*FD
Mill Creek #31	N41.4178°	W81.6387°	0.12	Upstream of Canal Road	Cleveland South	Ohio EPA Permit No. 3PA00002*FD

\* These locations will be sampled according to Ohio EPA Permit No. 3PA00002\*FD and are included here for comparison purposes only.

The purpose of sampling at each location is to compare the macroinvertebrate communities and water quality data from the upstream sampling sites to those

from the respective sampling sites located downstream from areas of NEORSD-owned CSOs. Data generated will be used to evaluate the extent to which NEORSD CSOs or other environmental factors may be impacting the downstream macroinvertebrate community.

(6) Schedule

The first round of artificial substrate samplers will be installed on these streams at all of the sites in June 2008 and retrieved six weeks later. The second round of artificial substrate samplers will be installed on these streams at all of the sites approximately in August 2008 and retrieved six weeks later. Specific dates have not been scheduled. River flow and weather conditions will be assessed weekly to determine when the HD sampler installations and retrievals will be conducted.

Ohio EPA Macroinvertebrate Field Sheets will be completed during the retrieval of each HD sampler.

If possible, one to two electrofishing surveys will be conducted between June 15 and October 15, 2008. Each survey would be conducted at least four to five weeks apart. Specific dates have not been scheduled. Stream and weather conditions, as well as, availability of NEORSD personnel will be assessed weekly to determine when each electrofishing pass will be conducted.

Water samples will be collected approximately every eight days throughout each macroinvertebrate colonization period, unless surface water conditions are deemed unsafe.

Habitat evaluations will be conducted one time at each location between June 15 and September 30, 2008.

(7) QA/QC

Quality assurance and quality control of sampling and analysis methods for habitat, fish, and macroinvertebrate evaluations will follow Ohio EPA's *Biological Criteria for the Protection of Aquatic Life, Volumes II* (1987, updated January 1, 1988 and November 8, 2006) and *III* (1987, updated September 30, 1989 and November 8, 2006) and *Methods for Assessing Habitat in Flowing Waters: Using the Qualitative Habitat Evaluation Index (QHEI)* (2006).

Macroinvertebrate community assemblages will be collected and shipped to EA Engineering, Science and Technology for identification and enumeration except for those that may be identified by Tiffany Moore of NEORSD. EA Engineering, Science and Technology will identify specimens to the lowest practical taxonomic

Benthic Macroinvertebrate Sampling Upstream of NEORSD CSO Areas Study Plan  
February 5, 2008

level and when the condition of the specimen allows, to the level of taxonomy recommended in Ohio EPA's *Biological Criteria for the Protection of Aquatic Life, Volume III* (1987, updated September 30, 1989 and November 8, 2006). The EA Engineering, Science and Technology QA/QC manual is attached (Appendix C). All macroinvertebrate specimens will be returned to NEORSD by EA Engineering, Science and Technology. Voucher specimens for each site will be separated into individual vials and collected as described in section (14). The remaining specimens for each site will be returned in a single container labeled with the site number and method and date of collection. All specimens and accompanying chain-of-custody documentation will be retained by NEORSD and stored at the Environmental & Maintenance Services Center (EMSC) for a period not less than ten years.

Electrofishing equipment will be used according to the guidelines listed in the operation and maintenance manual provided by Smith-Root, Inc. Malfunctioning equipment will not be used to conduct surveys. Proper steps will be taken to correct the problem as soon as possible, whether by repairing in the field or at the NEORSD EMSC or by contacting the supplier or an appropriate service company.

Subsamples of difficult to identify fish species will be brought back to the laboratory for verification by NEORSD personnel, and if necessary sent to The Ohio State University College Museum of Biological Diversity for verification by the Curator and/or Associate Curator of Fish. Voucher specimens will be collected as described in section (14). Endangered species and those too large for preservation will not be collected as voucher specimens, but will instead be photographed. Photographed vouchers will include features that will permit definitive identification of the particular species.

Water samples obtained for chemical analyses will be collected, labeled and then placed on ice inside the field truck. The field truck will remain locked when not occupied/visible. Sampling activities, including sample time and condition of surface water sampled, will be entered in a QDC log book and on the water quality observation checklist. The samples will then be delivered immediately to the NEORSD Analytical Services cooler, after which the door to the cooler will be locked and the samples will be transferred to the custody of Analytical Services. The NEORSD Analytical Services Quality Manual and associated Standard Operating Procedures is on file with Ohio EPA. The Quality Assurance Officer at Analytical Service will send updates, revisions and any information on document control to Ohio EPA as needed.

Benthic Macroinvertebrate Sampling Upstream of NEORSO CSO Areas Study Plan  
February 5, 2008

(8) Work Products

Within one year of completion of the project, fish data (species, numbers, weights, pollution tolerances, the incidence of DELT anomalies, IBI and MIwb scores), macroinvertebrate data (types and numbers of macroinvertebrates collected and ICI scores), habitat data (QHEI raw data and scores) and water chemistry results will be submitted to the Ohio EPA. Additionally, reports summarizing, interpreting, graphically presenting and discussing the IBI, MIwb, ICI and QHEI scores and any excursions from water quality standards will be prepared for internal use.

(9) Qualified Data Collectors

The following Level 3 Qualified Data Collectors (QDC) will be involved with this study:

Name	Address	Email Address	Phone Number	QDC Specialty(s)
<sup>1</sup> John W. Rhoades	4747 East 49 <sup>th</sup> Street Cuyahoga Hts., Ohio 44125	rhoadesj@neorsd.org	216-641-6000	QDC - 008 CWQA/FCB/SHA

<sup>1</sup> Lead Project Manager		<sup>4</sup> Project Manager Benthic Macroinvertebrate Identification		
<sup>2</sup> Stream Habitat Assessment (SHA)		<sup>5</sup> Fish Community Biology (FCB)		
<sup>3</sup> Benthic Macroinvertebrate Biology (BMB) Project Manager		<sup>6</sup> Chemical Water Quality Assessment (CWQA) Project Manager		

The following is a list of persons not qualified as a QDC who may be involved in the project. Prior to the start of sampling, the project managers will explain to each of these and any other individuals the proper methods for macroinvertebrate, electrofishing and water quality sample collections. Sampling will only be completed under the direct observation of a QDC. The lead project manager will be responsible for reviewing all reports and data analysis prepared by qualified personnel prior to completion.

Date:

02/05/08

(14) Voucher Specimen Statement

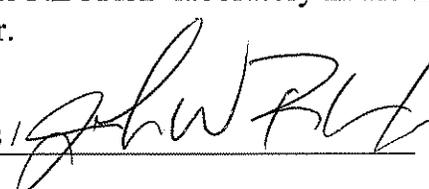

Based on Ohio EPA's Final Responsiveness Summary of the Credible Data Rules (3/24/06), NEORSD is requesting approval of an alternative vouchering protocol, as follows:

NEORSD will maintain a benthic macroinvertebrate or fish voucher collection which includes two specimens of each species or taxa collected during the course of biological sampling from any stream within the NEORSD's service area. When benthic macroinvertebrate specimens from other surface waters are collected within the same year and identified by the same QDC, one voucher collection will be created to represent the specimens collected from those streams. When fish specimens from multiple surface waters are collected within the same year, a single voucher collection will be created to represent the specimens collected from those streams. A separate collection for each sampling event will not be maintained.

NEORSD will provide specimen vouchers to the Director upon request. This collection will be stored at the NEORSD laboratory in the Environmental and Maintenance Services Center.

# Marsh-McBirney Model 2000 Portable Flowmeter

## SPECIFICATIONS

### Velocity Measurement

Method  
Electromagnetic

Zero Stability  
± 0.05 ft/sec

Accuracy  
± 2% of reading + zero stability

Range  
-0.5 to +19.99 ft/sec  
-0.15 m/sec to +6 m/sec

### Power Requirements

Batteries  
Two D Cells

Battery Life Continuous ON hours  
Alkaline 25-30  
NiCad 10-15 per charge

External Power Supply (Optional)  
120 V, 1 W or 220 V, 1 W

### Water Resistant Electronic Case

Submersible  
One Foot for 30 Seconds

### Outputs

Display  
3<sup>1</sup>/<sub>2</sub> Digit

Signal Output Connector (Optional)  
Analog 0.1 V = 1 ft/sec or 1 m/sec  
2 V = Full Scale

### Materials

Sensor  
Polyurethane

Cable  
Polyurethane jacket

Electronic Case  
High Impact Molded Plastic

### Weight

3 lb 9 oz with case and 20 ft of cable  
2 lb 10 oz without sensor and cable

### Temperature

Open-Channel-Velocity Sensor  
32° F to 160° F (0° C to 72° C)

Full-Pipe Sensor (S/S Insertion Tube)  
32° F to 160° F (0° C to 72° C) @ 250 psi

Electronics  
32° F to 122° F (0° C to 50° C)M

## Appendix C

## Standard Operating Procedures

### Laboratory Processing of Benthic Samples

Upon arrival at the laboratory, the Hester-Dendy (H-D), Surber, and qualitative samples were logged in and accounted for. Prior to sorting and identification, each sample was rinsed on a No. 60 (0.250 mm openings) U.S. Standard Testing Sieve to remove the preservative and the H-D plates were scraped to remove the organisms. Sorting of each H-D and Surber sample was conducted in a white enamel pan first under a magnifier lamp and finally under a compound dissecting scope. If necessary, a Folsom sample splitter was used to subsample the H-Ds and Surbers until a more manageable number of organisms was achieved. Prior to splitting, the sample was pre-picked to remove any large and/or rare taxa. In all a minimum of 250 organisms in representative proportions were removed from the fractionated samples. Organisms were sorted to higher taxonomic levels (generally Class or Order level) and preserved separately in labeled vials containing 70% ethyl alcohol. To assure a consistent level of quality and sorting efficiency, senior EA personnel checked all samples. The qualitative samples contained very little detrital matter and therefore were simply rinsed prior to identification.

Macroinvertebrate identifications were made to the lowest practical taxonomic level using the most current literature available (see attached list of taxonomic literature). Whenever possible, the level of identifications followed those recommended by Ohio EPA (2006). Chironomidae larvae were cleared in warm 10% potassium hydroxide and mounted in CMC-10 prior to identification. Generally, 100 chironomids from any single sample were mounted for identification. For all sample types, specimens were enumerated, coded and recorded on a standard laboratory bench sheet for data processing.

### Data Analyses

The Invertebrate Community Index (ICI) was used as the principal measure of overall macroinvertebrate community condition. Developed by the Ohio EPA, the ICI is a modification of the Index of Biotic Integrity for fish (Ohio EPA 1987). The ICI consists of ten individually scored structural community metrics:

1. Total number of taxa
2. Total number of mayfly taxa
3. Total number of caddisfly taxa
4. Total number of dipteran taxa
5. Percent mayflies
6. Percent caddisflies
7. Percent Tanytarsini midges
8. Percent other dipterans and non-insects
9. Percent tolerant organisms
10. Total number of qualitative EPT taxa.

Scoring criteria for all ten metrics is dependent upon drainage area. The scoring of an individual sample was based on the relevant attributes of that sample compared to equivalent data from 232 reference sites throughout Ohio. Metric scores range from six points for values comparable to exceptional community structure to zero points for values that deviate strongly from the expected range of values based on scoring criteria established by Ohio EPA (1989a). The sum of the individual metric scores resulted in the ICI score for that particular location.

Calculation of the ICI was conducted using a computer program written for the software SAS® by EA in 1994. This program is continuously tested and updated to ensure its accuracy. Although the ICI is most often used to analyze the combination of H-D and qualitative data from a particular location, for this study, the ICI was also calculated for the combination of Surber and qualitative data when H-D data were not available.

The only other statistical comparison used was the relative abundance (or percent composition) of individual taxa from each site and sample type. Relative abundance was calculated for both sample types as:

$$\text{Rel. Abund.(\%)} = 100 \times \frac{\text{\# Individuals of a Taxa}}{\text{Total \# of Individuals in Sample}}$$

All sample processing and data analysis were completed by permanent and full-time EA Engineering, Science, & Technology, Inc. staff working in our Deerfield, Illinois office and laboratory. Specific staff members that worked on this project and relevant experience are listed below by task:

<u>Task</u>	<u>EA Personnel</u>	<u>Years of Experience</u>
Login, Sorting, Mounting	Conrad Zack	2
Identification	Marty Sneen	19
Data Analysis	Joe Vondruska	24
	Marty Sneen	19

### **Selected Ohio EPA Reporting Requirements**

#### Item 12-Taxonomic literature

Although EA's taxonomic library contains substantially more references than are listed here, the following list only includes taxonomic literature used to identify the benthos in samples from Big Creek, Doan Brook, Euclid Creek, and Mill Creek.

- Wiggins, G.B. 1996. Larvae of the North American caddisfly genera (Trichoptera). 2nd edition. University of Toronto Press, Toronto, Canada.

#### Item 13-Voucher Collection

A voucher collection was developed containing two good specimens (when available) of each taxon identified from the samples. This voucher collection along with all sample specimens will be returned to NEORS D upon completion of all the sample analysis.

Outside expert specimen verification was not necessary for identification of these specimens. However, if a reference collection had been needed to verify any specimens, EA maintains a sizable macroinvertebrate voucher collection with over 1800 specimens representing over 700 taxa. If this taxonomic library proved to be insufficient, every reasonable attempt would be made to have the specimen(s) identified or verified by a noted authority.

#### Item 16-Chironomidae Identification

Chironomidae larvae were cleared in warm 10% potassium hydroxide and mounted in CMC-10 prior to identification. Generally, 100 chironomids from any single sample are mounted for identification. Species level identifications generally follow those suggested by Ohio EPA.

### Item 17-Copies of Raw Data

Copies of the laboratory bench sheets are appended to the hard copy of this document.

### Item 18-ICI Calculation

The Invertebrate Community Index (ICI) was used as the principal measure of overall macroinvertebrate community condition. Developed by the Ohio EPA, the ICI is a modification of the Index of Biotic Integrity for fish (Ohio EPA 1987). The ICI consists of ten individually scored structural community metrics:

- |                                |  |
|--------------------------------|--|
| 1. Total number of taxa        | 3. Total number of caddisfly taxa          |
| 2. Total number of mayfly taxa | 4. Total number of dipteran taxa           |
| 5. Percent mayflies            | 8. Percent other dipterans and non-insects |
| 6. Percent caddisflies         | 9. Percent tolerant organisms              |
| 7. Percent Tanytarsini midges  | 10. Total number of qualitative EPT taxa.  |

Scoring criteria for all ten metrics is dependent upon drainage area. The scoring of an individual sample was based on the relevant attributes of that sample compared to equivalent data from at least 232 reference sites throughout Ohio. Metric scores range from six points for values comparable to exceptional community structure to zero points for values that deviate strongly from the expected range of values based on scoring criteria established by Ohio EPA (1989a). The sum of the individual metric scores resulted in the ICI score for that particular location.

Calculation of the ICI was conducted using a computer program written for the software SAS® by EA in 1994. This program is continuously tested and updated to ensure its accuracy.

### Item 20-Statistical Analyses

The only other statistical comparison used was the relative abundance (or percent composition) of individual taxa per site and sample type. Relative abundance was calculated for both sample types as:

$$\text{Rel. Abund.} = \frac{\# \text{ Individuals of a Taxa}}{\text{Total \# of Individuals in Sample}}$$

### Item 21-Results

Complete results are appended to the hard copy of this document.

### Item 25-Electronically Formatted Data

For convenience, the data and text are provided in electronic format as Word 2003® files via email and on the enclosed CD-RW.

12 December 2007

Mr. John Rhoades  
North East Ohio Regional Sewer District  
Environmental & Maintenance Services Center  
4747 East 49th St.  
Cuyahoga Heights, OH 44125-1011

Dear John:

This letter serves as my acknowledgement that I am responsible for the following during the 2008 monitoring period:

- 1) Collection of one HD sample and one qualitative sample, identification of the macroinvertebrates in these samples, and assistance with the development of the West Creek macroinvertebrate voucher collection as necessary. These tasks will be completed as per the 2008 West Creek Restoration Evaluation study plan.
- 2) Benthic macroinvertebrate identifications and benthic macroinvertebrate voucher collection development for all benthic macroinvertebrate samples collected as per the 2008 Benthic Macroinvertebrate Sampling Upstream of NEORSO CSO Areas study plan unless West Creek restoration begins. If this is the case, then I will collect one HD sample and one qualitative sample for identification.
- 3) Benthic macroinvertebrate identifications and benthic macroinvertebrate voucher collection development and for all benthic macroinvertebrate samples collected as per the 2008 Cuyahoga River Electrofishing & Benthic Macroinvertebrate Surveys study plan.

In addition, I acknowledge that Level 3 QDC Certification by Ohio EPA is required to perform these tasks and that I am responsible for maintaining my Level 3 QDC Certification during the term of these studies.

Sincerely,

A handwritten signature in black ink, appearing to read 'Martin E. Sneen', written in a cursive style.

Martin E. Sneen  
Benthic Taxonomist/EA Project Manager

Re: Qualified Data Collector Approval, Surface Water Volunteer Monitoring Program

Dear Mr. Rhodes:

The Division of Surface Water Volunteer Monitoring (Credible Data) Program has reviewed your Qualified Data Collector (QDC) application. Pursuant to Ohio Revised Code (ORC) 6111.53 and Ohio Administrative Code (OAC) 3745-4-03, you are approved as a QDC for the following level and specialty:

**QDC Level:** 3  
**QDC Specialty:** Chemical Water Quality Assessment  
**QDC number:** 008

Please use this QDC number on all correspondence, study plans, etc. submitted to Ohio EPA.

As noted at the top of this letter, this status is effective as of the date of this letter and expires two years from that date. You may now submit study plans to the Volunteer Monitoring Program.

A renewal application must be submitted in accordance with OAC 3745-4-03(C). As provided in this rule, renewal of status is contingent upon active participation in the Volunteer Monitoring Program at the designated level and specialty. Lack of such participation will prevent you from renewing your status, but you may re-apply for initial QDC status.

As a reminder, your status is contingent upon the absence of any trespassing violation (within the previous five years) by you or any person sampling under your supervision. Always obtain land owner permission prior to sampling.

I certify this to be a true and accurate copy of the  
Official Document as filed in the records of the State of Ohio  
Environmental Protection Agency

Bob Taft, Governor  
Bruce Johnson, Lieutenant Governor  
Joseph P. Koncelik, Director

*M. P. Ashmore* 6/30/06

Ohio EPA is an Equal Opportunity Employer

Qualified Data Collector Approval  
Page Two

Additionally, collection (and retention) of aquatic biological samples (this includes fish, macroinvertebrates, mollusks, and shells) requires a collector's permit from the Ohio Department of Natural Resources/Division of Wildlife. Obtain this permit prior to collection of any biological samples.

The approval of this certification is a final action of the director of Ohio EPA and may be appealed to the Environmental Review Appeals Commission pursuant to ORC 3745.04. The appeal must be in writing and set forth the action complained of and the grounds upon which the appeal is based. It must be filed with the Commission within thirty days after notice of the director's action. Notice of the filing of the appeal must be filed with the director within three days after the appeal is filed with the commission. An appeal may be filed with the Commission at the following address: 309 South Fourth Street, Room 222, Columbus, Ohio 43215.

Sincerely,

  
Joseph P. Koncelik  
Director

State of Ohio Environmental Protection Agency

Re: Qualified Data Collector Approval, Surface Water Volunteer Monitoring Program

Dear Mr. Hothem:

The Division of Surface Water Volunteer Monitoring (Credible Data) Program has reviewed your Qualified Data Collector (QDC) application. Pursuant to Ohio Revised Code (ORC) 6111.53 and Ohio Administrative Code (OAC) 3745-4-03, you are approved as a QDC for the following level and specialty:

QDC Level: 3  
QDC Specialty: Chemical Water Quality Assessment  
QDC number: 010

Please use this QDC number on all correspondence, study plans, etc. submitted to Ohio EPA.

As noted at the top of this letter, this status is effective as of the date of this letter and expires two years from that date. You may now submit study plans to the Volunteer Monitoring Program.

A renewal application must be submitted in accordance with OAC 3745-4-03(C). As provided in this rule, renewal of status is contingent upon active participation in the Volunteer Monitoring Program at the designated level and specialty. Lack of such participation will prevent you from renewing your status, but you may re-apply for initial QDC status.

As a reminder, your status is contingent upon the absence of any trespassing violation (within the previous five years) by you or any person sampling under your supervision. Always obtain land owner permission prior to sampling.

I certify this to be a true and accurate copy of the official document as filed in the records of the Ohio Environmental Protection Agency.  
Bob Taft, Governor  
Bruce Johnson, Lieutenant Governor  
Joseph P. Koncelik, Director

*Joseph P. Ashmore* 6/30/06

Qualified Data Collector Approval

Additionally, collection (and retention) of aquatic biological samples (this includes fish, macroinvertebrates, mollusks, and shells) requires a collector's permit from the Ohio Department of Natural Resources/Division of Wildlife. Obtain this permit prior to collection of any biological samples.

The approval of this certification is a final action of the director of Ohio EPA and may be appealed to the Environmental Review Appeals Commission pursuant to ORC 3745.04. The appeal must be in writing and set forth the action complained of and the grounds upon which the appeal is based. It must be filed with the Commission within thirty days after notice of the director's action. Notice of the filing of the appeal must be filed with the director within three days after the appeal is filed with the commission. An appeal may be filed with the Commission at the following address: 309 South Fourth Street, Room 222, Columbus, Ohio 43215.

Sincerely,

Re: Qualified Data Collector Approval, Surface Water Volunteer Monitoring Program

Dear Ronald:

The Division of Surface Water Volunteer Monitoring (Credible Data) Program has reviewed your Qualified Data Collector (QDC) application. Pursuant to Ohio Revised Code (ORC) 6111.53 and Ohio Administrative Code (OAC) 3745-4-03, you are approved as a QDC for the following level and specialty:

**QDC Level:** 3  
**QDC Specialty:** Chemical Water Quality Assessment  
**QDC number:** 145

Please use this QDC number on all correspondence, study plans, etc. submitted to Ohio EPA.

As noted at the top of this letter, this status is effective as of the date of this letter and expires two years from that date. You may now submit study plans to the Volunteer Monitoring Program.

A renewal application must be submitted in accordance with OAC 3745-4-03(C). As provided in this rule, renewal of status is contingent upon active participation in the Volunteer Monitoring Program at the designated level and specialty. Lack of such participation will prevent you from renewing your status, but you may re-apply for initial QDC status.

As a reminder, your status is contingent upon the absence of any trespassing violation (within the previous five years) by you or any person sampling under your supervision. Always obtain land owner permission prior to sampling.

Additionally, collection (and retention) of aquatic biological samples (this includes fish, macroinvertebrates, mollusks, and shells) requires a collector's permit from the Ohio Department of Natural Resources/Division of Wildlife. Obtain this permit prior to collection of any biological samples.

Ted Strickland, Governor  
Lee Fisher, Lieutenant Governor  
Chris Korleski, Director

You are hereby notified that this action of the Director is final and may be appealed to the Environmental Review Appeals Commission pursuant to Section 3745.04 of the Ohio Revised Code. The appeal must be in writing and set forth the action complained of and the grounds upon which the appeal is based. The appeal must be filed with the Commission within thirty (30) days after notice of the Director's action. The appeal must be accompanied by a filing fee of seventy dollars (\$70.00) which the Commission, in its discretion, may reduce if by affidavit you demonstrate that payment of the full amount of the fee would cause extreme hardship. Notice of the filing of the appeal must be filed with the Director within three (3) days of filing with the Commission. Ohio EPA requests that a copy of the appeal be served upon the Ohio Attorney General's Office, Environmental Enforcement Section. An appeal may be filed with the Commission at the following address: 309 South Fourth Street, Room 222, Columbus, Ohio 43215.

Sincerely,

A handwritten signature in cursive script that reads "Chris Korleski".

Chris Korleski  
Director
