

Diagrammatic Overview of Air Services

- Air Services is a component of the Ohio EPA eBusiness Center and the Ohio EPA Division of Air Pollution Control State Air Resources System (STARS2). Air Services is web-based software that replaced and improves greatly upon the functionality of the STARShip software.

- Air Services is designed based on the airflow of air contaminant sources at your facility to release (egress) to the ambient air. Relationships between operations, control equipment, and egress points are structured in a facility profile represented by a tree diagram in the system.

- Air Services is designed to encompass the vast majority of regulated community interaction with Ohio EPA, including:
 - Permitting
 - Compliance reporting
 - Emissions Reporting
 - Fee Emissions Reporting
